INDIVIDUAL FUND MANAGEMENT AND INVESTMENTS

CM-AM INSTITUTIONAL SHORT TERM

This fund is actively managed on a discretionary basis. Its investment objective is to achieve a return net of expenses that exceeds that of its benchmark, the compounded €STR index, over the recommended investment period. In the event of particularly low, negative or volatile rates, the net asset value of the fund may decrease structurally. The benchmark index accounts for the compounding of interest.

To achieve its investment objective, the fund actively positions its portfolio in accordance with its risk environment and performance objective, while seeking to optimise its risk/return profile.

The portfolio is constructed within the acceptable range of interest rate exposure, as determined from the investment team's market and risk analyses.

The investment process begins with a macro-economic analysis of the global economy and geopolitical environment which serves to anticipate market trends. The next steps are a micro-economic analysis of security issuers and a review of various technical aspects of money markets, to ensure that the investment decision process encompass all sources of added value in fixed-income markets. Investment decisions primarily concern:

- exposure to interest rate risk

- geographic allocation
- the credit risk exposure resulting from sector allocation and issuer selection
- the choice of investment vehicles.

The fund's maximum volatility will not exceed that of the compounded \in STR index by more than 0.50%.

The fund will observe the following net asset exposure limits:

- Up to 110% of net assets may be invested in the debt instruments of sovereign, public, private, OECD and eurozone issuers, regardless of geographic region, provided these instruments are of investment grade quality, as determined by the management company or a credit-rating agency

The fund's interest-rate sensitivity may range from 0 to +0.5.

- From 0% to 10% exposure to the currency risk of non-euro currencies.

The fund may invest:

- in investment grade debt securities and money-market instruments;

- up to 10% of its net assets in French or foreign UCITS funds and in French general purpose investment funds (FIVG) that meet the requirements of Article R.214-13 of the French monetary and financial code.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to interest-rate, credit and currency risks.

Leverage is not expected to exceed 150%.

- deposit cash with credit institutions, borrow cash and engage in securities financing transactions.

CM-AM GLOBAL GOLD

This fund is actively managed on a discretionary basis. Its objective is to provide a return net of expenses over the recommended investment period that is consistent with the return of equities in the gold mining and commodities sectors, by investing in a carefully selected portfolio of securities in these sectors. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, the fund's performance may be compared with a benchmark, such as the NYSE ARCA GOLD MINERS, for ex-post evaluation.

The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index.

The index is calculated at the closing price in euros with dividends not reinvested.

To achieve its objective, the fund invests in securities directly and/or through investment funds, which are selected on the basis of a fundamental analysis of the economic and business conditions of the various sectors associated with gold, commodities and natural resources, and the macro-economic forecasts of the portfolio management company.

The fund will observe the following net asset exposure limits:

From 60% to 110% of net assets may be invested in equities of all geographic regions (including emerging markets), with no restrictions on market capitalisation, and in the following sectors, subject to the following limits:

- from 60% to 110% in equities linked to gold and natural resources
- at least 50% in equities linked to gold-mining
- from 0% to 50% in emerging equity markets

- from 0% to 10% in equities with market capitalisations of less than EUR 150 million.

From 0% to 10% may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries), provided these instruments are of investment grade quality, as determined by the management company or a credit-rating agency.

From 0% to 10% may be invested in convertible bonds.

From 0% to 110% to foreign exchange risk on currencies other than the euro.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio's exposure beyond 100% of net assets.

CM-AM SUSTAINABLE PLANET

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with ISR label criteria. Its investment objective is to outperform eurozone equity markets over the recommended investment horizon by building a selective portfolio of securities issued by companies committed to sustainable development and social responsibility. This type of management strategy, which gives the fund manager discretion in allocating assets, does not require a benchmark index. However, the fund's performance may be compared with a benchmark for ex-post evaluation, such as the MSCI AC World Index. The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index. This index is calculated at its closing price in euros and with dividends reinvested.

This fund's name reflects its ambition to reduce the environmental footprint of humanity. The environment is sometimes defined as "everything that surrounds an individual or species, some elements of which contribute directly to the needs of the individual or species". To achieve its objective, the investment team employs a stock-picking approach to select the companies in its portfolio. The initial investment universe consists of companies in the European Union, Switzerland, Norway and the United Kingdom, with market capitalisations of more than 500 million euros and which have received an ESG rating, which is consistent with the various non-financial criteria shown below. The investment strategy therefore employs both financial and non-financial analyses to filter this universe. The fund's strategy is underpinned by a selective approach that favours companies with the highest ESG ratings, or which are making progress in their environmental, social and governance practices, and excludes those whose ESG practices are considered to be risky. The investment process comprises the following four steps:

1. ESG filter: The investment team will implement a non-financial filter to screen for specific ESG criteria which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. This filter covers governance, societal, social and environmental quality criteria and the company's commitment to a socially responsible approach. For example, the company's carbon intensity for the E pillar, its human resources policy for the S pillar, and the proportion of independent directors for the G pillar. This filter ranks issuers from 1 to 5, with 5 being the best rating. Fund managers will only select companies with a rating of 3 or higher. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. Fund managers will exclude all companies with major controversies. By excluding the lowest rated securities, this initial ESG screening reduces the investment universe by at least 20%.

2. Thematic filter: The sustainability of remaining securities is then assessed on the basis of the following five themes:

- Environmental Efficiency: solutions to make buildings, infrastructure, industrial processes smarter, cleaner, secure.

- Urban and Mobility solutions: to develop public transportation and improve housing.

- The Circular Economy: to produce goods and services in a sustainable manner, limiting the consumption and waste of resources and the production of waste. Recycling will also be addressed in this area.

- Alternative Energies: energies that do not require fossil fuels, such as solar and wind power, biomass and hydrogen.

- Health & Quality of Life: protecting human lives from health risks, contributing to the well-being of people while minimising their impact on the environment.

The companies selected must be engaged in one of the five above themes.

3. Financial analysis: Securities are then subject to a financial analysis to retain only those that are clearly of high quality. This universe constitutes the securities that are monitored and eligible for investment.

4. Portfolio construction: From this short-list of securities, the investment team then employs a stockpicking approach to select those it believes offer the most attractive valuations. Portfolio construction is based on fund manager assessments of investment potential and quality.

The investment team may also make ancillary investments in investment funds. The SRI labelled funds that Crédit Mutuel Asset Management manages will incorporate the extra financial qualitative filter in accordance with the management company's policy.

Non-financial criteria are observed for at least 90% of the securities and funds selected by the investment team. The fund may invest up to 10% of its net assets directly in securities or funds that do not implement ESG criteria. These selection processes may result in inconsistencies between assets in terms of the investment approach, criteria or techniques employed.

Companies with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund was awarded the French ISR label for socially responsible investment.

The fund will observe the following net asset exposure limits:

From 60% to 110% of net assets may be invested in equity markets in all geographic regions, with no restrictions on market capitalisation or sector, subject to the following limits:

- from 60% to 110% in eurozone markets

- from 0% to 25% in non-eurozone markets, of which 0% to 10% in the Americas and Asia & Pacific regions.

- from 0% to 10% in equities with market capitalisations of less than 150 million euros.

From 0% to 10% may be invested in sovereign, public and private fixed-income instruments, regardless of geographic region, provided these instruments are of investment grade quality, as determined by the management company or a credit-rating agency.

From 0% to 25% exposure to the currency risk of non-euro currencies.

At least 75% of the fund's net assets must remain invested in securities that are eligible for PEA savings plans.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity risk, without leveraging the portfolio.

CM-AM INFLATION

This fund is actively managed on a discretionary basis. Its objective is to achieve an annual return net of expenses that outperforms its benchmark index (Barclays Euro Government inflation linked bonds 1-10Y) over the recommended investment period. The composition of the fund's portfolio may differ significantly from that of its benchmark. The index is calculated at the closing price in euros with dividends and coupons reinvested.

To achieve its objective, the fund will invest in the following debt securities and money-market instruments:

- issued mainly by sovereign states and public and private companies of the eurozone and indexed to inflation

- issued by sovereign states, public and private companies of OECD countries outside of the eurozone, and indexed to inflation

- issued by sovereign states, public and private companies of OECD countries, at a fixed, floating or adjustable rate

The fund actively manages its assets in accordance with its expectations regarding:

- inflation, and its effect on the key interest rates of central banks and on nominal and real yield curves

- credit risk, to enhance the portfolio's return by rigorously selecting sovereign, public or private issuers on the basis of their credit quality.

The fund will observe the following net asset exposure limits:

From 0% to 100% of net assets may be invested in sovereign, public and private debt instruments of the OECD countries, provided these instruments are of investment grade quality, as determined by the management company or a credit-rating agency, or possibly non-rated, subject to the following limits:

- 80% to 100% in eurozone issuers

- 0% to 20% in non-eurozone issuers

- 0% to 25% in speculative securities, which may be non-rated.

The fund's interest-rate sensitivity may range from 0 to +8.

0% to 10% exposure to the currency risk of non-euro currencies.

The fund may invest:

- in debt securities and money-market instruments, including securitisation instruments

- up to 10% of net assets in French or foreign UCITS funds and in French general purpose investment funds (FIVG) that meet the requirements of Article R.214-13 of the French monetary and financial code.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to interest-rate, credit and currency risks.

These instruments may increase the portfolio's overall exposure to a maximum of 110% of net assets.

- deposit cash with credit institutions, borrow cash and engage in securities financing transactions.

CM-AM GLOBAL LEADERS

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with ISR label criteria. Its investment objective is to provide a return net of expenses, over the recommended investment period, that is consistent with the performance of global equities, by investing in international companies with strong brands and business models that give them leading positions in their market. These companies must be committed to sustainable development and social responsibility criteria, which creates value for shareholders. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, the fund's performance may be compared with a benchmark, such as the MSCI AC World Index, for ex-post evaluation. The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index.

This index is calculated at its closing price in euros and with dividends reinvested.

To achieve its investment objective, the fund actively seeks out and rigorously selects securities from the universe of leading global equities. This selection is based on a fundamental analysis of these securities and forecasts of macroeconomic growth, with no predetermined sector or geographic allocations. The investment strategy consists in employing ESG screening and financial analysis to filter this universe. The fund's strategy is underpinned by a selective approach that favours issuers with the highest ESG ratings, or which are making progress in their environmental, social and governance practices, and excludes those whose ESG practices are considered to be risky. The investment process comprises the following four steps:

1. ESG filter and controversy management: The investment team will implement filters to screen for specific ESG criteria which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. This filter covers governance, societal, social and environmental quality criteria and the company's commitment to a socially responsible approach. For example, the company's carbon intensity for the E pillar, its human resources policy for the S pillar, and the proportion of independent directors for the G pillar. This filter ranks issuers from 1 to 5, with 5 being the best rating. The managers will eliminate the lowest rated issuers. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. Fund managers will exclude all issuers with major controversies. By excluding the lowest rated securities, this initial ESG screening reduces the investment universe by at least 20%.

2. Thematic filter related to the brand: The remaining companies are then screened to retain only those with a brand, reputation or franchise that is well known to the general public. To determine this, the investment team relies on global brand rankings that are published and reviewed annually by consultancies, trade publications and polling firms. The stock selection process employs qualitative and quantitative criteria that measure the maturity of the company's brand and its operational and financial performance. Issuer brands are thus classified as follows:

- a leading brand, or a strong business model
- a brand that is rising and influential and/or is aligned with new global consumer trends
- a re-emerging brand with good recovery prospects.

3. Financial analysis: Companies are then subjected to a financial analysis to retain only those that are clearly of high quality. This universe constitutes the securities that are monitored and eligible for investment.

4. Portfolio construction: When the financial and extra financial analyses are completed, fund managers will employ a "stock-picking" approach to select securities on the basis of their convictions.

Non-financial criteria are observed for at least 90% of the securities and funds selected by the investment team. The fund may invest up to 10% of its net assets directly in securities or funds that do not implement ESG criteria.

Issuers with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund was awarded the French ISR label for socially responsible investment.

The fund will observe the following net asset exposure limits:

From 80% to 110% of net assets may be invested in equities of all geographic regions (including emerging markets), with no restrictions on market capitalisation or sector. Up to 20% of net assets may be exposed to small-cap companies (< \leq 3 billion)

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments of all geographic regions (including emerging countries), regardless of credit rating as determined by the management company or a rating agency, or the lack of such a rating.

From 0% to 10% in convertible bonds

Up to 100% of net assets may be exposed to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives, used for hedging and/or to gaining exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio exposure beyond 100% of net assets.

CM-AM GREEN BONDS

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with CREDIT MUTUEL ASSET MANAGEMENT's policy and in compliance with GREENFIN label criteria. It does not use a benchmark index. Its investment objective is to provide a return net of expenses that is consistent with the performance of the green bond market over the recommended investment period.

The investment strategy mainly consists in using ESG screening and financial analysis to determine the universe of eligible securities. A "green" bond is a bond issued by a company, an international organisation, a sovereign state or a local authority to finance a project or an activity with environmental benefits such as adaptation to climate change, sustainable water management, sustainable management of natural resources and biodiversity preservation. Greens bonds are qualified as such by their issuers, which after issuance must monitor and report on the progress of these projects. On the basis of these reports, the green bonds and the projects they finance will be assessed using the following 3-step methodology:

1. Non-financial analysis:

1. Exclusion filter: The investment team excludes companies that derive revenue from such activities as the exploration, production and commercial exploitation of fossil fuels, the nuclear sector, and waste storage facilities and landfill sites that do not capture greenhouse gases. The exclusion criteria are described in the prospectus.

2. Bond filter (rated 1 to 100): Green bonds are assessed on the basis of four criteria: the existence of a "green" project, the process for evaluating and selecting green projects, the management of bond issuance proceeds, and the quality of reporting. These criteria are in line with the best practice guidelines for green bond issuance set forth in the Green Bond Principles, which may change over time. The Green Bond Principles can evolve over time. The regulatory issuance documents specify the criteria and methodologies used to make investments in eligible projects. In addition to their own analyses, fund managers may use data from environmental and social agencies.

3. Issuer filter (rated 1 to 100): Green bond issuers are assessed on the basis of three criteria: ESG performance, contribution to the environmental transition and management of ESG controversies.

4. Rating: The above assessments are used to determine an overall ESG rating of 1 to 100. The bond accounts for 70% of this overall rating and the issuer for 30%. The investment universe shall only include securities with an overall rating of 50 or above.

2. Financial analysis: Values are analysed on a financial basis to retain only those values whose quality is clearly identified. This universe constitutes the securities that are eligible for investment.

3. Portfolio construction: The portfolio is constructed in accordance with the results of the investment team's market and risk analyses over the entire yield curve and within the acceptable range of interest rate sensitivity.

Selection processes are described in detail in the 'Investment Strategy' section of the prospectus. Green bonds must constitute 85% of net assets at all times. These selection processes may result in inconsistencies between assets in terms of the investment approach, criteria or techniques employed. Green bonds with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund has obtained the Greenfin label.

The fund will observe the following net asset exposure limits:

From 0% to 200% of net assets may be invested in sovereign, public and private debt instruments of all geographic regions (including emerging countries), with no restrictions on their credit rating as

determined by the management company or a credit rating agency, and may be non-rated. The fund's exposure to speculative debt instruments may not exceed 20%.

The fund's interest-rate sensitivity may range from 0 to +10.

From 0% to 20% in convertible bonds

From 0% to 10% of net assets may be invested in equities of all geographic regions (including emerging markets), with no restrictions on market capitalisation or sector. The fund will hold no equities directly.

No more than 20% of net assets may be exposed to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks. Leverage is not expected to exceed 100%.

- engage in securities financing transactions.

CM-AM ENTREPRENEURS EUROPE

This fund is actively managed on a discretionary basis. It does not use a benchmark index. Its investment objective is to achieve a return net of expenses that exceeds the performance of European equities over the recommended investment period.

To achieve its objective, the fund will employ a stock-picking strategy based on fundamental analysis to build a portfolio of entrepreneurial and/or family-owned companies. The fund manager will be looking for companies with a proven ability and capacity to innovate their products and services and to differentiate within their markets, and which are clearly determined to expand geographically.

The fund will mainly invest in companies where at least 20% of share capital is held by stable shareholders, preferably founders and/or managers.

The main stock selection criteria are as follows:

- Quantitative: revenue and earnings growth, cash flow, debt ratios and return on capital employed.

- Qualitative: analysis of competitive position, long-term strategy, and stability of management.

The fund will observe the following net asset exposure limits:

From 60% to 100% of net assets may be invested in European equities (including emerging markets), with no restrictions on market capitalisation or sector, and subject to the following limit:

- from 0% to 30% in small-cap equities with capitalisations of less than 3 billion euros

From 0% to 10% may be invested in sovereign, public and private fixed-income instruments, regardless of geographic region, provided these instruments are of investment grade quality, as determined by the management company or a credit-rating agency.

From 0% to 100% exposure to the currency risk of non-euro currencies.

At least 75% of the fund's net assets must remain invested in securities that are eligible for PEA savings plans.

The fund may invest:

- in equities
- in debt securities and money-market instruments

- up to 10% of net assets in French or foreign UCITS funds and in French general purpose investment funds (FIVG) that meet the requirements of Article R.214-13 of the French monetary and financial code.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity and interest-rate risks, which may increase the portfolio's overall exposure to a maximum of 110% of net assets.

- deposit and borrow cash.

CM-AM GLOBAL INNOVATION

This fund is actively managed on a discretionary basis. Its investment objective is to provide a return that is consistent with the performance of global equities that are likely to benefit from economic transformation driven by digital technology and automation, as determined by the management company's research. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, the fund's performance may be compared with a benchmark, such as the MSCI AC World Index, for ex-post evaluation.

The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index.

This index is calculated at its closing price in euros and with dividends reinvested.

Innovation is defined as the introduction of something new into an existing system.

The criteria used to assess the degree of a company's innovativeness are both qualitative (the technological, human and organisational resources deployed for innovation) and quantitative, such as R&D spending, the contribution to revenue growth of new products, investments, etc. Innovation must enhance the company's prospects for growth and profitability.

To achieve its investment objective, the fund implements an active and rigorous stock-picking methodology within its universe of leading global equities, which includes those of the emerging countries. The stock selection process deemed innovative is based on a fundamental and financial analysis (growth, profitability, valuation) of the securities.

Equities are selected from a filtered universe of companies that includes:

- companies in high-tech sectors that disseminate technological innovation to their customers.

- conventional companies in conventional sectors (manufacturing, health, finance, services, consumer, energy, etc.) that have significantly innovated their production processes

- companies that differentiate themselves in their market by providing a completely new and innovative product or service. These companies reinvent and remove brokers from traditional industries.

From among the above companies, the investment team selects those whose innovation efforts most enhance their potential to create shareholder value.

The fund manager will invest in equities, debt securities and money market instruments, either directly or through investment funds.

The fund will observe the following net asset exposure limits:

From 80% to 120% in equity markets. The fund may invest up to 20% of its net assets in companies with market capitalisations of less than EUR 150 million, and up to 30% in emerging country equities.

From 0% to 10% of net assets may be invested in sovereign, public or private debt instruments, regardless of geographic region (including emerging countries) and credit rating as determined by the management company or a credit-rating agency.

Up to 100% of net assets may be exposed to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio's overall exposure to a maximum of 120% of net assets.

CM-AM HIGH YIELD 2024

This fund is actively managed on a discretionary basis. Its objective is to achieve a return net of expenses that exceeds that of its benchmark, which is the yield to maturity of the 1.75% 25 November 2024 OAT bond FR0011962398 (the estimated TRA yield of OATs was 0.25% at 19/10/2018), by gaining exposure to speculative "high-yield" securities with a low credit rating or none, over the period between the fund's inception and its last NAV of 2024, calculated on 31 December.

The fund's investment objective takes into account the estimated risk of default, the cost of hedging, and management fees. This objective is based on Crédit Mutuel Asset Management's projections of market behaviour. It is not a promise of performance or performance. Investors should note that the performance objective targeted does not account for all cases of default.

After the calculation of net asset value on 31/12/2024, and subject to the AMF's prior approval and the notification of shareholders, the fund will change its investment strategy.

To achieve its investment objective, the fund employs a "carry" or "buy-and-hold" investment strategy. The fund manager will initially select debt securities with maturities of no more than three months beyond the fund's last net asset value in December 2024, while seeking to diversify the portfolio's geographic exposure and sector allocation. The portfolio will be constructed with money-market instruments, debt securities and shares and units in investment funds. This construction will reflect the management company's convictions of credit quality and comply with its investment process. The portfolio will mainly be composed of speculative "high-yield" securities with a low credit rating or none. Due to the speculative nature of the debt securities of some companies, such a portfolio may enable significantly higher returns in exchange for higher risk, compared to a portfolio consisting exclusively of securities deemed to be "Investment Grade", by either the management company or a credit rating agency. This type of strategy involves very low portfolio turnover. However, the fund's manager may always switch between more or less speculative positions in the shareholder's interest. Cash from securities that matured before December 2024 will be reinvested in bonds and debt securities with maturities as close as possible to the last net asset value in December 2024 or in money market instruments.

The fund will observe the following net asset exposure limits:

From 90% to 200% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries), credit rating as determined by the management company or a credit-rating agency, or the lack of such a rating.

The fund's interest-rate sensitivity may range from 0 to +7.

From 0% to 10% of net assets may be invested in equities of all geographic regions (including emerging markets), with no restrictions on market capitalisation or sector.

Instruments issued in a currency other than the euro are systematically hedged against currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio's exposure beyond 100% of net assets

- engage in securities financing transactions.

CM-AM SHORT TERM BONDS

This fund is actively managed on a discretionary basis. Its investment objective is to achieve a return net of expenses that exceeds that of its benchmark, the compounded €STR index, over the recommended investment period. If interest rates are particularly low, negative or volatile, the fund's net asset value may be exposed to a structural decline. The benchmark index accounts for the compounding of interest.

To achieve its investment objective, the fund actively positions its portfolio in accordance with its risk environment and performance objective, while seeking to optimise its risk/return profile.

The portfolio is constructed within the acceptable range of interest rate exposure, as determined from the investment team's market and risk analyses.

The investment process begins with a macro-economic analysis of the global economy and geopolitical environment which serves to anticipate market trends.

The next steps are a micro-economic analysis of security issuers and a review of various technical aspects of money markets, to ensure that the investment decision process encompass all sources of added value in fixed-income markets. Investment decisions primarily concern:

- exposure to interest rate risk
- geographic allocation
- the credit risk exposure resulting from sector allocation and issuer selection
- the choice of investment vehicles

- the short position strategy (hedging against interest rate risk or switching one issuer's yield curve for another in anticipation of a wider credit spread).

The fund will observe the following net asset exposure limits:

From 80% to 150% of net assets may be invested in sovereign, public and private debt instruments of the eurozone and OECD member countries, regardless of credit rating as determined by the management company or a credit-rating agency, or the lack of such a rating.

The fund's interest-rate sensitivity may range from 0 to +0.5.

From 0% to 10% of net assets may be invested in equities of all geographic regions (including emerging markets), with no restrictions on market capitalisation or sector.

No more than 10% of net assets may be exposed to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks. The indicative leverage is 200%.

- engage in securities financing transactions.

CM-AM CONVICTIONS EURO

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with ISR label criteria. This fund's objective is to achieve an annual return net of expenses that exceeds the performance of its benchmark, the EURO STOXX Net Return index, over the recommended investment period. The composition of the fund's portfolio may differ significantly from that of its benchmark. This index is calculated at its closing price in euros and with dividends reinvested.

The fund seeks to increase the value of your investment by investing in equities denominated in euros. The fund is actively managed and invests in equities and equity-convertible securities issued by eurozone companies with a minimum market capitalisation of 200 million euros.

The fund invests at least 75% of its assets in equities issued by companies whose registered office is in an EU country. At least 75% of the fund's net assets must remain invested in securities that are eligible for PEA savings plans.

To achieve its investment objective, the fund invests in securities (either directly or through investment funds) selected on the basis of a fundamental analysis of the issuer's potential for long-term value creation. The investment strategy consists in employing ESG screening and financial analysis to filter this universe. The fund's strategy is underpinned by a selective approach that favours companies with the highest ESG ratings, or which are making progress in their environmental, social and governance practices, and excludes those whose ESG practices are considered to be risky.

The investment process observes the following 3-step methodology:

1. ESG filter: The investment team will implement filters to screen for specific ESG criteria which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. This filter covers governance, societal, social and environmental quality criteria and the company's commitment to a socially responsible approach. For example, the company's carbon intensity for the E pillar, its human resources policy for the S pillar, and the proportion of independent directors for the G pillar. This filter ranks issuers from 1 to 5, with 5 being the best rating. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. Fund managers will exclude all issuers with major controversies. By excluding the lowest rated securities, this initial ESG screening reduces the investment universe by at least 20%.

2. Financial analysis: Securities are then subjected to financial analysis to retain only those that clearly offer a superior business model and sound fundamentals. This universe constitutes the securities that are monitored and eligible for investment.

3. Portfolio construction: From this short-list of securities, the investment team then employs a stockpicking approach to select those it believes offer the most attractive valuations. Portfolio construction is based on fund manager assessments of investment potential and quality.

Non-financial criteria are observed for at least 90% of the securities selected by the investment team. The fund may invest up to 10% of its net assets directly in securities or funds that do not implement ESG criteria.

Issuers with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund was awarded the French ISR label for socially responsible investment.

The fund will observe the following net asset exposure limits:

From 60% to 100% of net assets may be invested in equity markets of all geographic regions (including emerging markets), with no restrictions on market capitalisation or sector. The fund may invest no more than 10% of net assets in non-EU country equities and no more than 10% in emerging country equities.

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments of the euro zone, regardless of credit rating as determined by the management company or a credit-rating agency, or the lack of such a rating.

From 0% to 100% exposure to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, but without leveraging the portfolio.

CM-AM SMALL & MIDCAP EURO

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with ISR label criteria. This fund's objective is to achieve an annual return net of expenses that exceeds the performance of its benchmark, the EURO STOXX Small Net Return index, over the recommended investment period. The composition of the fund's portfolio may differ significantly from that of its benchmark.

The fund seeks to increase the value of your investment by investing in equities with a market capitalisation of 200 million to 10 billion EUR at the time of purchase. The fund is actively managed and invests in equities (including preferred stocks) and equity-convertible securities denominated in euros.

The fund selects companies that it believes offer the best prospects of being successful in their respective industries. At least 75% of the fund's net assets must remain invested in securities that are eligible for PEA savings plans.

The investment strategy consists in employing ESG screening and financial analysis to filter this universe. The fund's strategy is underpinned by a selective approach that favours issuers with the highest ESG ratings, or which are making progress in their environmental, social and governance practices, and excludes those whose ESG practices are considered to be risky. The management process breaks down into three stages as follows:

1. ESG filter: The investment team will implement filters to screen for specific ESG criteria which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. This filter covers governance, societal, social and environmental quality criteria and the company's commitment to a socially responsible approach. For example, the company's carbon intensity for the E pillar, its human resources policy for the S pillar, and the proportion of independent directors for the G pillar. This filter ranks issuers from 1 to 5, with 5 being the best rating. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. Fund managers will exclude all issuers with major controversies. By excluding the lowest rated securities, this initial ESG screening reduces the investment universe by at least 20%.

2. Financial analysis: Securities are then subjected to financial analysis to retain only those that clearly offer a superior business model and sound fundamentals. This universe constitutes the securities that are monitored and eligible for investment.

3. Portfolio construction: From this short-list of securities, the investment team then employs a stockpicking approach to select those it believes have the most potential to create value. Portfolio construction is based on fund manager assessments of investment potential and quality.

Non-financial criteria are observed for at least 90% of the securities and funds selected by the investment team. The fund may invest up to 10% of its net assets directly in securities or funds that do not implement ESG criteria.

Issuers with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund was awarded the French ISR label for socially responsible investment.

The fund will observe the following net asset exposure limits:

From 60% to 100% of net assets may be invested in equity markets of all geographic regions (including emerging markets), with no restrictions on sector. The fund must invest at least 60% of its net assets in EU equities with a market capitalisation of 200 million to 10 billion EUR at the time of purchase.

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments of the euro zone, regardless of credit rating as determined by the management company or a credit-rating agency, or the lack of such a rating.

From 0% to 100% exposure to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, but without leveraging the portfolio.

CM-AM FLEXIBLE EURO

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with French ISR label criteria. This fund's objective is to achieve an annual return net of expenses that exceeds the performance of its benchmark index (50% Compounded STR + 50% EURO STOXX LARGE Net Return) over the recommended investment period. This index is calculated at closing market prices in euros with dividends reinvested, with its interest component compounded at the €STR rate. The composition of the fund's portfolio may differ significantly from that of its benchmark.

The fund is actively managed and invests mainly in equities, in securities convertible into equities, in negotiable debt securities (TCN) convertible into equities or warrants (financial contracts that enable the fund to purchase securities at a future date and usually at a fixed price) denominated in euros and issued by companies in Europe.

The investment strategy is to invest, on a discretionary basis, in a diversified portfolio of French and foreign securities. More specifically, it consists of:

- the selection of equities and equity-linked securities by specialist teams of fund managers and analysts. In making their selection, fund managers focus in particular on business models and valuations.

- supplementing the above selection with securities that are representative of the EUROSTOXX LARGE index, to ensure that at least 75% of the fund's net assets are always invested in equities;

- using derivatives to actively shift asset allocation between equity markets and money-market instruments.

Depending on its outlook for equity markets, the investment team may decide to hedge the exposure of its equity portfolio by selling futures contracts on listed stocks. The fund's exposure to equities may therefore vary from 0% to 100% of its net assets, with no use of leverage allowed.

The investment strategy consists in actively allocating assets between equity markets and debt securities. This is achieved by selling futures on listed stocks to partially or fully hedge the equity portfolio, or by investing in debt securities. To determine this allocation, the investment team takes into consideration a macro-economic scenario, market valuations and portfolio risk exposures.

The fund invests at least 75% of its assets in equities issued by companies whose registered office is in an EU country. At least 75% of the fund's net assets must remain invested in securities that are eligible for PEA savings plans.

To achieve its investment objective, the fund invests in securities (either directly or through investment funds) selected on the basis of a fundamental analysis of the issuer's potential for long-term value creation. The investment strategy consists in employing ESG screening and financial analysis to filter this universe. The fund's strategy is underpinned by a selective approach that favours issuers with the highest ESG ratings, or which are making progress in their environmental, social and governance practices, and excludes those whose ESG practices are considered to be risky. The investment process observes the following 3-step methodology:

1. ESG filter: The investment team will implement filters to screen for specific ESG criteria which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. This filter covers governance, societal, social and environmental quality criteria and the company's commitment to a socially responsible approach. For example, the company's carbon intensity for the E pillar, its human resources policy for the S pillar, and the proportion of independent directors for the G pillar. This filter ranks issuers from 1 to 5, with 5 being the best rating. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. Fund managers will exclude all issuers with major controversies. By excluding the lowest rated securities, this initial ESG screening reduces the investment universe by at least 20%.

2. Financial analysis: Securities are then subjected to financial analysis to retain only those that clearly offer a superior business model and sound fundamentals. This universe constitutes the securities that are monitored and eligible for investment.

3. Portfolio construction: From this short-list of securities, the investment team then employs a stockpicking approach to select those it believes have the most potential to create value. Portfolio construction is based on fund manager assessments of investment potential and quality.

Non-financial criteria are observed for at least 90% of the securities selected by the investment team. The fund may invest up to 10% of its net assets directly in securities or funds that do not implement ESG criteria.

Issuers with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund was awarded the French ISR label for socially responsible investment.

The fund will observe the following net asset exposure limits:

From 0% to 100% of net assets may be invested in equities, regardless of geographic region, market capitalisation or sector. The fund may invest up to 100% of its net assets in EU equities.

From 0% to 100% of net assets may be invested in sovereign, public and private debt instruments of the euro zone, regardless of credit rating as determined by the management company or a credit-rating agency, or the lack of such a rating, either directly or through investment funds, or may be used to hedge the equity portfolio by selling futures on equities.

From 0% to 100% exposure to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, but without leveraging the portfolio.

CM-AM CONVERTIBLES EURO

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with ISR label criteria. This fund's seeks to achieve an annual return net of expenses that exceeds that of its benchmark, the REFINITIV CONVERTIBLE EUROPE Index, over the recommended investment period. The composition of the fund's portfolio may differ significantly from that of its benchmark. The benchmark index is calculated at its closing price, in euros and with coupons reinvested.

The fund is actively managed and invests in negotiable debt securities (convertible or exchangeable bonds and notes), warrants (financial contracts that enable the fund to purchase securities at a future date and usually at a fixed price) and other financial instruments that may be converted into equity issued by companies in Europe or in other developed countries anywhere in the world. Although the fund will mainly invest in negotiable debt securities denominated in euros, it may also invest in debt securities denominated in a non-euro currency.

The investment strategy consists in employing ESG screening and financial analysis to filter this universe. The fund's strategy is underpinned by a selective approach that favours issuers with the highest ESG ratings, or which are making progress in their environmental, social and governance practices, and excludes those whose ESG practices are considered to be risky. The investment process involves the following steps:

1. ESG filter and controversy management: The investment team will implement filters to screen for specific ESG criteria which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. This filter covers governance, societal, social and environmental quality criteria and the company's commitment to a socially responsible approach. For example, the company's carbon intensity for the E pillar, its human resources policy for the S pillar, and the proportion of independent directors for the G pillar. This filter ranks issuers from 1 to 5, with 5 being the best rating. The managers will eliminate the lowest rated issuers. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. Fund managers will exclude all issuers with major controversies. By excluding the lowest rated securities, this initial ESG screening reduces the investment universe by at least 20%.

2. Portfolio construction: When the financial and non-financial analyses are completed, the investment team selects stocks and builds the portfolio in accordance with its convictions.

Non-financial criteria are observed for at least 90% of the securities and funds selected by the investment team. The fund may invest up to 10% of its net assets directly in securities or funds that do not implement ESG criteria.

Issuers with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund was awarded the French ISR label for socially responsible investment.

The fund will observe the following net asset exposure limits:

From 0% to 100% of net assets may be invested in public or private convertible or exchangeable bonds, regardless of geographic region (including emerging countries), credit rating as determined by the management company or a credit-rating agency, or the lack of such a rating.

From 0% to 150% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries), credit rating as determined by the management company or a credit-rating agency, or the lack of such a rating.

From 0% to 10% of net assets may be invested in equities of all geographic regions (including emerging markets), with no restrictions on market capitalisation or sector. The fund may invest up to 20% of its net assets directly in equities, i.e. not through conversion.

From 0% to 100% exposure to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio's overall exposure to a maximum of 200% of net assets.

CM-AM GLOBAL CLIMATE CHANGE

This fund is managed actively, on a discretionary basis and implements fundamental and financial analyses while integrating qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with GREENFIN label criteria. Its investment objective is to achieve a return that is consistent with the performance of the equity market over the recommended investment period by investing in global companies which are listed on regulated markets and actively contribute, either directly or indirectly, to the prevention of global warming, to the energy and climate transition, and to sustainable development. The fund is aligned with the United Nations' sustainable development goals, and with the following goals in particular: clean water and sanitation, affordable and clean energy, responsible consumption and production, life on land, and climate action. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, for ex-post evaluation purposes the fund's performance may be compared with that of the MSCI ALL COUNTRY WORLD Index. The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index. This index is calculated at its closing price in euros and with dividends reinvested.

The initial investment universe includes the global equities of the MSCI ALL COUNTRY WORLD index. It also includes companies with a market capitalisation of over €100 million from all geographic regions, including the emerging countries, and which obtain at least 10% of their revenue from one or more of the eight eco-businesses. From these securities, the investment team selects approximately 30 to 60 equities using non-financial filters and financial analysis. The investment process includes the following steps:

1. Thematic filter: The companies selected must be active in at least one of the following eight "ecobusinesses" activities: energy, construction, circular economy, industry, transportation, information and communication technologies, agriculture (including forestry) and climate change adaptation.

2. Exclusion filter: The investment team excludes companies that derive revenue from such activities as the exploration, production and commercial exploitation of fossil fuels, the nuclear sector, and waste storage facilities and landfill sites that do not capture greenhouse gases. The exclusion criteria are described in the prospectus.

3. Carbon filter: Crédit Mutuel Asset Management's Responsible and Sustainable Finance analysis unit has developed a "carbon scoring" model that rates companies on a scale of 1 to 5, with 5 being the best score. This score is supplemented with an assessment of the company's carbon behaviour over several years, as either - (regressing), = (stable) or + (progressing). As indicated in the prospectus, these two criteria are used to eliminate at least 20% of the lowest-rated securities.

4. ESG filter and controversy management: The investment team will implement non-financial filters to screen for specific environmental, social and governance criteria, which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. These filters cover governance quality, employee, social and environmental (including climate-related) criteria, and consequently a company's commitment to social responsibility. For example, our ESG categories including respect for human rights, climate strategy and management quality. These filters are used to rate issuers on a scale of 1 to 5, with 5 being the highest rating. Fund managers will only select companies with a rating above 1. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. The investment team will exclude companies involved in a major controversy.

5. Selection within this filtered universe: The investment team conducts fundamental, financial and non-financial analyses of the remaining companies of this universe. The fundamental and financial analyses will mainly involve assessing the company's position in its sector's value chain, its growth prospects, value creation, management team and policy to combat global warming, and monitoring various financial ratios.

6. Portfolio construction: When these financial and non-financial analyses are completed, the investment team will select those equities it feels are most attractively valued and build the portfolio in accordance with the following criteria:

- the average carbon score of the companies selected must exceed that of the investable universe after eliminating 20% of the companies with the lowest carbon scores. From this filtered universe, the investment team will select companies that obtain all or some of their revenue from one of the eight aforementioned eco-businesses, subject to the following limits:

at least 20% of the portfolio companies must obtain at least 50% of their revenue from one or more eco-business activities

- no more than 25% may obtain from 0% to 10% of their revenue from one or more eco-business activities,

- the remainder may consist of companies that obtain from 10% to 50% of their revenue from one or more eco-business activities, and of debt and money market instruments, with the latter two constituting no more than 10% of the portfolio.

As explained in the prospectus, the use of external data and the lack of certain data may prevent consistent carbon and ESG criteria from being systematically used. Non-financial criteria are assessed for at least 90% of the fund's net assets.

The fund has obtained the Greenfin label.

The fund will observe the following net asset exposure limits:

From 80% to 110% of net assets may be invested in equities of all geographic regions (including emerging markets), with no restrictions on market capitalisation or sector.

From 0% to 10% of net assets may be invested in sovereign, public and private debt instruments of all geographic regions (including emerging countries), regardless of credit rating as determined by the management company or a rating agency, or the lack of such a rating.

Up to 100% of net assets may be exposed to currency risk.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio's exposure beyond 100% of net assets.

- engage in securities financing transactions.

CM-AM GLOBAL EMERGING MARKETS

This fund is actively managed on a discretionary basis. Its investment objective is to achieve a return net of expenses that exceeds the performance of equity markets over the recommended investment period. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, for ex-post evaluation purposes the fund's performance may be compared with that of the MSCI Emerging Countries index.

The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index.

This index is calculated at its closing price in euros and with dividends reinvested.

To achieve its objective, the fund invests in the securities of issuers in emerging or new industrial countries, which are selected on the basis of a fundamental analysis of business conditions and of the relevant sectors, and the macro-economic forecasts of the portfolio management company.

The fund will observe the following net asset exposure limits:

From 60% to 110% of net assets may be invested in equities of all geographic regions (including emerging markets), with no restrictions on market capitalisation or sector, subject to the following limit:

- from 0% to 20% in equities with market capitalisations of less than 3 billion euros.

From 0% to 10% may be invested in sovereign, public and private debt instruments, regardless of geographic region (including emerging countries) or credit rating, as determined by the management company or a credit-rating agency.

From 60% to 110% in emerging equity and fixed income markets

From 0% to 110% to foreign exchange risk on currencies other than the euro.

The fund may invest:

- in equities

- up to 10% of its net assets in French or foreign UCITS or general purpose investment funds governed by French law, meeting the conditions of article R.214-13 of the Monetary and Financial Code.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate and currency risks, which may increase the portfolio's exposure beyond 100% of net assets.

- deposit and borrow cash.

CM-AM EUROPE GROWTH

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with French ISR label criteria. It does not use a benchmark index. This fund's investment objective is to increase the value of its portfolio over the recommended investment period, by selecting companies that observe specific sustainable development and social responsibility criteria and which have the potential for profitable growth, as determined by the management company.

To achieve this objective, the fund invests in securities (either directly or through investment funds) selected on the basis of a fundamental analysis of companies whose share price is highly dependent on their growth prospects. The investment strategy consists in employing ESG screening and financial analysis to filter this universe. The fund's strategy is underpinned by a selective approach that favours issuers with the highest ESG ratings, or which are making progress in their environmental, social and governance practices, and excludes those whose ESG practices are considered to be risky.

The investment process observes the following 3-step methodology:

1. ESG filter: The investment team will implement filters to screen for specific ESG criteria which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. This filter covers governance, societal, social and environmental quality criteria and the company's commitment to a socially responsible approach. For example, the company's carbon intensity for the E pillar, its human resources policy for the S pillar, and the proportion of independent directors for the G pillar. This filter ranks issuers from 1 to 5, with 5 being the best rating. The managers will only select issuers rated above 2. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. Fund managers will exclude all issuers with major controversies. By excluding the lowest rated securities, this initial ESG screening reduces the investment universe by at least 20%.

2. Financial analysis: Securities are then subjected to financial analysis to retain only those that clearly offer high-quality financials and profitable growth prospects. This universe constitutes the securities that are monitored and eligible for investment.

3. Portfolio construction: From this short-list of securities, the investment team then employs a stockpicking approach to select those it believes offer the most attractive valuations. Portfolio construction is based on fund manager assessments of investment potential and quality.

Non-financial criteria are observed for at least 90% of the securities selected by the investment team. The fund may invest up to 10% of its net assets directly in securities or funds that do not implement ESG criteria.

Issuers with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund was awarded the French ISR label for socially responsible investment.

The fund will observe the following net asset exposure limits:

From 0% to 110% in the equity markets, in all geographic zones of all capitalisations, in all sectors, including:

- from 0% to 25% in non-EU equity markets
- from 0% to 25% in small-cap equity markets with capitalisations of less than 3 billion euros

- from 0% to 10% in emerging equity markets.

From 0% to 25% of net assets may be invested in sovereign, public and private debt instruments, regardless of geographic region, credit rating as determined by the management company or a credit-rating agency, or the lack of such a rating, subject to the following limit:

- 0% to 5% in speculative debt instruments, which do not have to be rated.

From 0% to 10% on convertible bond markets

From 0% to 100% exposure to the currency risk of non-euro currencies.

At least 75% of the fund's net assets must remain invested in securities that are eligible for PEA savings plans.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio's exposure beyond 100% of net assets.

CM-AM DOLLAR CASH

This fund is actively managed on a discretionary basis. Its objective is to equal the performance of its benchmark, the Secured Overnight Financing Rate (SOFR), net of actual management fees and over the recommended investment period. If interest rates are particularly low, negative or volatile, the fund's net asset value may be exposed to a structural decline, which could adversely affect the fund's performance and compromise the objective of capital preservation.

To achieve its objective, the fund employs an active management style that seeks a return that is approximately equivalent to the average fed funds rate in a market risk environment that is comparable to that of this rate, while ensuring the stability of net asset value. This results in:

- Actively managing the average residual life of the portfolio securities in accordance with expected changes in key central bank interest rates, the money market yield curve and monthly fluctuations in the fed funds rate. The allocation between variable and fixed rates will vary with the expected changes in interest rates.

- Managing credit risk on the portion of the portfolio that is exposed to private sector debt by carefully selecting corporate debt issuers that will increase the portfolio's overall return.

Since the fund holds securities denominated in USD, the investments of residents of France or other euro-zone countries are exposed to currency risk.

The portfolio is composed of money-market instruments that meet the criteria of Directive 2009/65/EC and of term deposits in credit institutions. These instruments are selected on the basis of the management company's quality analysis and assessment process, or, but not exclusively, the short-term credit ratings of ESMA-registered agencies that have rated these instruments and which the management company deems most relevant, while avoiding any systematic dependency on these ratings.

If an instrument has not been rated, the management company will use an internal process to assess its quality.

A money-market instrument is deemed not to be of high credit quality if it has not obtained at least one of the two highest short-term credit ratings as determined by the management company.

The fund limits its investment to financial instruments that have a maximum residual maturity of two years, provided that their interest rate is adjustable within a maximum period of 397 days.

The Weighted Average Maturity (WAM) until the maturity date is 6 months or less. The portfolio's weighted average life (WAL) will not exceed 12 months. The fund may exceptionally invest from 5% to 100% of its net assets in money-market instruments issued or guaranteed individually or jointly by certain sovereign, quasi-sovereign or supranational entities.

It may invest up to 10% of its net assets in French or foreign UCITS funds and in French general purpose investment funds (FIVG) that meet the requirements of Article R.214-13 of the French monetary and financial code and are subject to by EU Regulation 2017/1131.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to interest-rate, credit and currency risks.

Direct or indirect exposure to equity and commodity risk, even through the use of financial contracts, is prohibited.

CM-AM PIERRE

This fund is actively managed on a discretionary basis. Its investment objective is to provide a return that is consistent with the performance of the listed EU real estate sector, by managing a selective portfolio of EU real estate and property securities over the recommended investment period. Assets are allocated at the fund manager's discretion and a benchmark index is not required. However, for ex post evaluation the fund's performance may be compared with that of an index, such as the FTSE EPRA Europe Index, which is composed of the largest companies in the pan-European property and land sector.

The fund's asset allocation and performance may therefore differ from that of its comparative benchmark index.

This index is calculated at its closing price in euros and with dividends reinvested.

To achieve its objective, the fund will employ a strategy of selectively and actively managing a variety of financial instruments that includes equities, debt securities, money-market instruments, and investment fund units or shares. The investment process includes:

- a macro-economic analysis of the real estate sector (including properties and land).

- a fundamental analysis of listed real estate companies.

The companies selected must meet specified criteria that measure their credit quality, valuation, and potential value.

The fund will observe the following net asset exposure limits:

From 65% to 110% of net assets may be invested in equity markets in all geographic regions, with no restrictions on market capitalisation or sector, subject to the following limits:

- at least 65% in real estate equities
- at least 60% in EU equity markets
- from 0% to 30% in non-EU equity markets
- from 0% to 10% in emerging equity markets.
- from 0% to 10% in equities outside of the real estate sector

From 0% to 10% may be invested in sovereign, public and private debt instruments, regardless of geographic region, provided these instruments are of investment grade quality, as determined by the management company or a credit-rating agency.

From 0% to 10% may be invested in convertible bonds.

From 0% to 100% exposure to the currency risk of non-euro currencies, and no more than 30% outside of the European Union

The fund invests at least 75% of its assets in EU real estate securities.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio's exposure beyond 100% of net assets.

CM-AM EUROPE VALUE

This fund is managed actively on a discretionary basis and implements qualitative ESG screening in accordance with Crédit Mutuel Asset Management's policy and in compliance with French ISR label criteria. It does not use a benchmark index. Its investment objective is to increase the value of its portfolio over the recommended investment period by selecting securities it considers to be undervalued.

To achieve this objective, the fund manager may select companies in the European Union, the United Kingdom, Switzerland and Norway with market capitalisations of over EUR 500 million and which are ESG rated. The investment strategy then consists in employing ESG screening and financial analysis to further filter this universe. The fund's strategy is underpinned by a selective approach that favours issuers with the highest ESG ratings, or which are making progress in their environmental, social and governance practices, and excludes those whose ESG practices are considered to be risky.

The investment process observes the following 3-step methodology:

1. ESG filter and controversy management: The investment team will implement filters to screen for specific ESG criteria which are determined using a proprietary methodology developed by the Responsible and Sustainable Finance Research team. These filters cover governance quality, employee, social and environmental criteria that serve to assess the commitment to social responsibility of a company or state. For example, our ESG criteria include carbon intensity (E), the gap between a company's average salary and its CEO's remuneration (S), and the proportion of women on the board of directors (G). This filter ranks issuers from 1 to 5, with 5 being the best rating. The managers will eliminate the lowest rated issuers. Each issuer's management of ESG controversies is also specifically reviewed, tracked and rated. Fund managers will exclude all issuers with major controversies. By excluding the lowest rated securities, this initial ESG screening reduces the investment universe by at least 20%.

2. Financial analysis: Within this filtered universe, securities are subject to in-depth financial analysis that is consistent with a Value investment strategy. The aim is to identify companies whose equities have been unjustifiably discounted and which have a solid balance sheet and a catalyst for recovery. This universe constitutes the securities that are monitored and eligible for investment.

3. Portfolio construction: When the financial and extra financial analyses are completed, fund managers will employ a "stock-picking" approach to select securities on the basis of their convictions.

Non-financial criteria are observed for at least 90% of the securities and funds selected by the investment team. The fund may invest up to 10% of its net assets directly in securities or funds that do not implement ESG criteria.

Issuers with the highest ESG ratings are not automatically included in the portfolio construction process as they must satisfy the financial analysis criteria.

The fund was awarded the French ISR label for socially responsible investment.

The fund will observe the following net asset exposure limits:

From 60% to 110% of net assets may be invested in equities of all geographic regions, with no restrictions on market capitalisation or sector, subject to the following limits:

- at least 60% in EU equity markets

- from 0% to 25% in equity markets with a capitalisation of less than 3 billion euros

From 0% to 10% may be invested in sovereign, public and private debt instruments, regardless of geographic region, provided these instruments are of investment grade quality, as determined by the management company or a credit-rating agency.

From 0% to 10% on the convertible bond market

From 0% to 100% exposure to the currency risk of non-euro currencies.

At least 75% of the fund's net assets must remain invested in securities that are eligible for PEA savings plans.

The fund may also:

- trade in forward contracts, futures, options and securities with embedded derivatives in order to hedge and/or gain exposure to equity, interest-rate, credit and currency risks, which may increase the portfolio's exposure beyond 100% of net assets.

AGENDA OF THE ANNUAL GENERAL MEETING

- 1. Management report of the Board of Directors and Statutory Auditor's report on the financial statements for the year ended 31 March 2023 Discharge granted to directors
- 2. Review and approval of the annual financial statements Allocation of distributable amounts
- 3. Special auditor's report
- 4. Powers

MANAGEMENT REPORT OF THE BOARD OF DIRECTORS TO THE ANNUAL GENERAL MEETING OF 28 JULY 2023

Dear shareholders,

In accordance with the applicable laws and regulations and the Company's Articles of Association, we have convened an Annual Ordinary General Meeting to report to you on the Company's activities during the past financial year and to ask you to approve the financial statements for the year ended 31 March 2023.

I. REPORT ON OPERATIONS

1. <u>Management policy</u>

CM-AM INSTITUTIONAL SHORT TERM

Manager's report

Post-COVID pandemic supply shortages and the war in Ukraine sent the entire global economy into an inflationary spiral. In Europe, this triggered a gradual increase in swap rates throughout the year. In the first half of the year, the ECB sent a number of signals to the market, making clear its firm intention to raise its key rates in July. With prices steadily rising and growth resilient, the ECB surprised investors with an initial rate hike of 50 bp, which brought the money-market rate close to zero. The summer of 2022 signalled the end of seven years of negative returns on money market funds. The last quarter of 2022 was marked by approximately 10% inflation in the eurozone. Christine Lagarde regularly stated that fighting inflation was her main priority. Unprecedented monetary tightening then followed from July 2022 until March 2023, with six successive rate hikes. This brought the ECB's deposit rate to 3% at the end of the year.

Against this background of inflationary fears, we maintained a low average maturity and low exposure to credit. We continued to favour those investments that offered the best liquidity.

Performance

Over the year the sub-fund's unit classes performed as follows:

- FR0007033477 (RC): 0.85%
- FR0013241452 (EI): 0.85%
- FR0014007LZ3 (IC): 0.88%
- FR0010290924 (RD): 0.85%
- Vs. 0.69% for the benchmark index (compounded ESTER).

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

This financial product promotes environmental and social characteristics by seeking to improve its ESG score. This means that the portfolio's ESG score (the asset-weighted average) must therefore be superior to that of its benchmark investment universe.

The financial product's ESG score at the end of the financial year was 6.4/10, while that of its benchmark universe was 5.7/10. The fund has therefore achieved the environmental and social characteristics it promotes via the ESG score.

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are:

- The financial product's ESG score, which is 6.4/10
- The ESG score of its benchmark universe, which is 5.7/10

The ESG score once again exceeded that of the benchmark universe, mainly due to overexposure to engaged, "best-in-class" issuers.

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

For funds without a sustainable investment objective: NA

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How are adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds without a sustainable investment objective: NA

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and

The investment

bribery.

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 01/04/2022 to 31/03/2023

| The largest investments | Sector | % of assets | Country |
|----------------------------------------|---------------------------|----------------|----------------|
| MERCEDES BENZ GROUP AG | Consumer discretionary | 6.81 | GERMANY |
| MITSUBISHI HC CAPITAL UK PLC | Finance | 5.48 | JAPAN |
| TOYOTA MOTOR CORP | Consumer discretionary | 5.43 | JAPAN |
| NATWEST GROUP PLC | Finance | 5.01 | UNITED KINGDOM |
| THE GOLDMAN SACHS GROUP INC (NY) | Finance | 4.26 | UNITED STATES |
| THERMO FISHER SCIENTIFIC INC | Healthcare | 4.03 | UNITED STATES |
| BANQUE FEDERATIVE DU CREDIT MUTUEL | Finance | 3.68 | FRANCE |
| STANDARD CHARTERED PLC | Finance | 3.32 | UNITED KINGDOM |
| ALLIANZ SE | Finance | 3.15 | GERMANY |
| OTIS WORLDWIDE CORPORATION | Industry | 3.13 | FRANCE |

What was the proportion of sustainable investments?

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

For funds with a sustainable investment objective: The financial product has committed to a minimum of 5% sustainable investments relative to total fund assets.

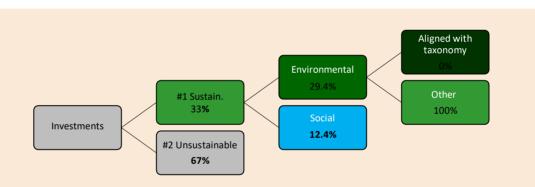

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

- Consumer discretionary
- Communication services
- Industry
- Materials
- Healthcare

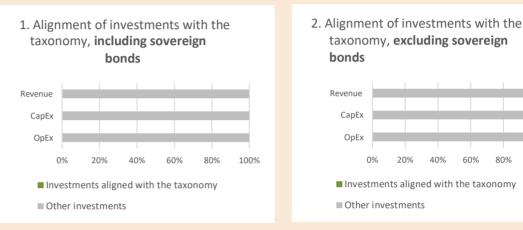

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 29.4%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 12.4%.

Enabling activities directly enable other

activities to make a substantial contribution to achieving an environmental objective.

Transitional activities are activities for which lowcarbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy. 100%

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the sustainable benchmark index?

If the financial product has no benchmark index: NA If the financial product has a benchmark index: NA

How did the benchmark index differ from a relevant broad market index?

How has this financial product performed relative to the broad benchmark index?

If the financial product has no benchmark index: NA

If the financial product has a benchmark index: NA

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

CM-AM GLOBAL GOLD

Manager's report

The first quarter of the financial year was marked by the outbreak of war in Ukraine. This major event will have a direct and indirect impact on all precious metals and on gold in particular. Another major event was the sharp rise in interest rates initiated by the US Federal Reserve and other central banks. This trend reversal, which was stronger and faster than expected, put gold on the defensive until September 2022. The US dollar's decline, which began in November 2022, gave gold a boost.

Metal-producing companies were strongly impacted by inflationary pressures in 2022. However, they generally met their production forecasts. 2022 also marked the return of renewed investment in exploration to replenish reserves.

Lastly, the year was marked by a number of mergers and acquisitions from which the fund benefited, for example by purchasing Yamana and Pretium.

The biggest contributors to performance were Alamos Gold, Torex Gold and Lundin Gold. Gold royalty companies also made positive contributions, with a special mention for Royal Gold and Nomad Royalty, which was bought out.

Among the mining developers, Filo Mining and G-Mining Venture were the best performers.

The detractors from performance were the "majors", and in particular Newmont, which disappointed once again. Among the "single producers", Wesdome and Victoria Gold were penalised by unexpected interruptions in production, which compromised the achievement of production targets and increased costs.

Over the period, we also invested in new players, such as G-Mining and Karora Mining. We also strengthened our position in Torex Gold, in view of its consistently robust results, before taking profits at the end of the year.

We reduced our position in New Gold when its CEO left. We sold Eldorado, which once again failed to deliver on its Greek assets.

We recently reinvested in Victoria Gold, after selling our stake in response to a series of disappointing results and a technical problem at its mine. These problems have since been resolved and the company has been able to keep its costs well under control.

We are very underweight Newmont following its offer for Newcrest. Although this offer makes a lot of sense in terms of the company's operations, it will probably have to be increased.

Sustainable investment objective

A sustainable

investment is an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does no significant harm to either of these objectives and that the company in which the investment is made observes good governance practices.

The EU taxonomy is a classification system established under Regulation (EU) 2020/852, which lists environmentally sustainable economic activities. This regulation does not apply to socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Does this financial product have a sustainable investment objective? × Yes No It has made sustainable It promoted environmental and social (E/S) investments with an characteristics and, although it did not have environmental objective: % a sustainable investment objective, at least 0% of its investments were sustainable: in economic activities that are with an environmental objective in economic considered environmentally activities that are considered sustainable under the EU environmentally sustainable under the EU taxonomy taxonomy in economic activities that are with an environmental objective in not considered economic activities that are not considered environmentally sustainable environmentally sustainable under the EU under the EU taxonomy taxonomy with a social objective It has made sustainable It promoted E/S features but did investments with a social X not make sustainable objective: % investments

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

This financial product is invested in producers of precious metals and, on an ancillary basis, in producers of other metals and raw materials.

This financial product promotes environmental and social characteristics by seeking to improve its ESG score. This means that the portfolio's ESG score (the asset-weighted average) must therefore be superior to that of its benchmark investment universe

The financial product's ESG score at the end of the period was 4.9/10, vs. 4.3/10 for its investment universe. the number of human rights related controversies and the percentage of women on boards of directors

Sustainability indicators are used to measure to what extent the financial product has achieved its sustainability objectives.

What were the results of sustainability indicators?

The sustainability indicator used by this financial product is the ESG score. At this end of the period, its ESG score exceeded that of its investment universe.

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

NA

• To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective? How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

NA

Principal adverse impacts are the most significant negative

significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment strategy ensures that

investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable. None of the financial product's investments are considered to be sustainable as determined using Crédit Mutuel Asset Management's methodology for assessing sustainable investments.

Furthermore, to facilitate the selection of securities and ensure that the stated environmental and social characteristics were achieved (ESG score higher than that of the investment universe), the financial product's manager also had access to the raw data associated with the sustainability indicators, via the ESG data provided by ISS, and to Crédit Mutuel Asset Management's ESG data.

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from **31/03/2022 to 31/03/2023**

CM-AM SUSTAINABLE PLANET

Manager's report

The Eurostoxx Large Net Return index gained 9.952% over the 12 months to 31 March 2023. The war between Ukraine and Russia, which began in February, and China's health policy severely disrupted global supply chains and contributed to a record rise in inflation.

To cope with this general increase in prices that affected commodities, electronic components and wages, central bankers were forced to tighten their monetary policy, thus bringing an end to an exceptional period of zero interest rates. Although the ECB began its rate hike cycle after the Federal Reserve, it made record increases of 75 bp in both September and October. Although the pace of tightening slowed in December, central banks will keep their key rates relatively high in 2023, to bring inflation back to an annual target of 2%.

On the geopolitical front, the ongoing war between Russia and Ukraine has caused major disruptions, particularly to the European Union's energy supplies, and has heightened tensions between some of the world's major powers.

On the economic front, inflation reached record highs over the year, while fears of recession have intensified considerably. The OECD has forecast global GDP growth of 2.2% in 2023, with major disparities between countries.

Stock markets saw large variations in performance between sectors. Only two sectors, Energy and Metals & Mining, ended the calendar year in the black, thanks to rising commodity prices, while Property and Retail fell by over 30%. The reopening of China boosted the Hotels & Leisure segment and consumer spending in general. The banking sector also benefited from the prospect of increasing interest rates.

The fund underperformed its index over the year, mainly due to its exposure to industrials and indebted renewable energy companies, and to its lack of oil stocks, in keeping with its investment theme. The year was marked by rapid and short-lived rotations between sectors, which triggered high volatility that was detrimental to conviction funds with a long-term focus on the energy transition and other sustainability related themes.

The portfolio's underperformance is mainly attributable to its lack of consumer discretionary stocks, which benefited from the reopening of China. These include such luxury groups as LVMH and Hermès, which gained 27.53% and 42.24% respectively over the period and in which the fund does not invest. The industrial sector, which accounts for many large positions, was massively shunned by investors. Examples include SAINT-GOBAIN, GEBERIT, ALSTOM, KINGSPAN, KNORR-BREMSE, LEGRAND, SCHNEIDER ELECTRIC and TOMRA. Investors sold off these high-quality companies, which are in line with the fund's theme, due to fears of slower growth and excessive valuations given their outperformance the previous year. Our absence from the banking sector—which we feel was insufficiently transparent about its exit from oil and gas financing, among other things – and our stock-picking in the renewable energy sector boosted our performance over the year. Finally, we decided to limit our exposure to low-carbon technology stocks, given the risk of semiconductor sector restocking, which failed to meet our expectations. Lastly, our positions on renewables reversed trend, with SOLARIA losing 17.6% on growth concerns and delays in the granting of new permits, ACCIONA ENERGIAS recovering by just 4.82% due to its high debt against a backdrop of rising interest rates, and NEOEN falling by 19.05%, while VEOLIA gained 1.45% and ENGIE 29.48%.

We added to our positions in renewable energy development companies, such as SOLARIA, ACCIONA ENERGIAS and NEOEN. We sold ERG, which has completed its transformation plan towards renewable energies, to purchase VEOLIA, the world leader in waste recovery and water management, since its merger with Suez.

In the eco-friendly mobility sector, we initiated a position in GETLINK and sold ALSTOM for KNORR-BREMSE, which makes rail-braking systems and electrical components for trucks. We also took a position in DASSAULT SYSTEMES, a key player in digitalisation and virtual design. Finally, we sold LINDE to add to AIR LIQUIDE, which has announced its new "Advance" strategic plan, which seeks to decarbonise industry while capitalising on the energy transition and other growth opportunities.

As indicated in the prospectus, pursuant to its investment strategy the fund has invested over 75% of its assets in securities that are eligible for PEA equity savings plans.

Performance

CMAM SUSTAINABLE PLANET's unit classes posted the following returns over the year:

- RC unit class: -4.27%
- IC unit class: -3.33%
- S unit class: -3.49%

while its Stoxx Large NR benchmark index ended the year with a 9.952% gain.

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

Sustainable investment objective

Product name: CM-AM SUSTAINABLE PLANET Legal entity identifier: 969500S8P9XFWKJ4IQ68

A sustainable

investment is an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does no significant harm to either of these objectives and that the company in which the investment is made observes good governance practices.

The EU taxonomy is a classification system established under Regulation (EU) 2020/852, which lists economic activities that are environmentally sustainable. This regulation does not apply to socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

| Does this financial product have a sustainable investment objective? | | | | |
|---------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------|--|
| •• | Yes | •• | × No | |
| It has made sustainable investments with an environmental objective:% | | It promoted environmental and social (E/S) characteristics and, although it did not have a sustainable investment objective, at least 60% of its investments were sustainable: | | |
| | in economic activities that are considered environmentally sustainable under the EU taxonomy | | with an environmental objective in economic activities that are considered environmentally sustainable under the EU taxonomy | |
| | in economic activities that are not considered environmentally sustainable under the EU taxonomy | | with an environmental objective in economic activities that are not considered environmentally sustainable under the EU taxonomy | |
| | | | with a social objective | |
| | It has made sustainable investments with a social objective:% | | It promoted E/S features but did not make sustainable investments | |

Sustainability indicators are used to measure to what extent the financial product has achieved its sustainability objectives.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. It also promotes environmental and social characteristics by aiming to outperform two of the key sustainability performance indicators of its ESG universe: the number of human rights related controversies and the percentage of women on boards of directors

1

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are the ESG score, the number of human rights controversies (*performance indicator 1*), the percentage of women on the board of directors (*performance indicator 2*) and the proportion of sustainable investments.

- The financial product's ESG score is 6.7/10, with no previous comparison.
- The percentage of women on boards of directors is 42.9%.
- There were no human rights controversies at the end of the period, with no previous comparison.
- The proportion of sustainable investments at the end of the period was 67.8%, with no previous comparison

... and in comparison with prior periods?

N/A

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

This financial product has a minimum investment requirement (60%) in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The **investment strategy** ensures that investment decisions are aligned with such

are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 31/03/2022 to 31/03/2023.

| The largest investments | Sector | % of assets | Country |
|--------------------------------------------------|-----------|----------------|-------------|
| SCHNEIDER ELECTRIC SE | Industry | 4.60 | FRANCE |
| NESTE CORPORATION | Energy | 4.33 | FINLAND |
| SIEMENS AG | Industry | 3.76 | GERMANY |
| SOLARIA ENERGIA Y MEDIOAMBIENTE SA | Utilities | 3.38 | SPAIN |
| CORPORACION ACCIONA ENERGIAS RENOVABLES SA | Utilities | 3.28 | SPAIN |
| COMPAGNIE DE SAINT GOBAIN SA | Industry | 3.20 | FRANCE |
| SIEMENS ENERGY AG | Industry | 2.86 | GERMANY |
| SYMRISE AG | Materials | 2.76 | GERMANY |
| KONINKLIJKE DSM NV | Materials | 2.66 | NETHERLANDS |
| NIBE INDUSTRIES AB | Industry | 2.59 | SWEDEN |

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

What was the proportion of sustainable investments?

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

The financial product has committed to a minimum of 60% sustainable investments relative to total fund assets.

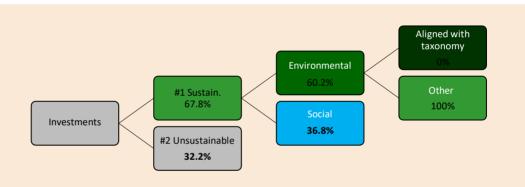

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

| Industry | 36.19 |
|--------------------------|-------|
| Utilities | 14.32 |
| Materials | 13.63 |
| Information technologies | 10.58 |
| Healthcare | 4.36 |
| Energy | 4.33 |
| Consumer staples | 3.44 |
| Consumer discretionary | 2.76 |
| Communication services | 2.51 |
| Finance | 2.42 |
| | |

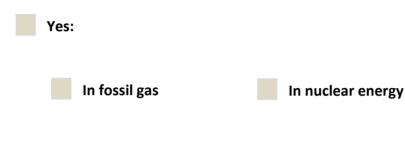

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

the end of 2035.

management.

taxonomy, the criteria for fossil

For **nuclear energy**, the criteria include comprehensive rules on nuclear safety and waste

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds*, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

Taxonomy-aligned activities are expressed as a percentage of:

- Revenue, to measure the share of revenue obtained from the green activities of investee companies:
- **Capital expenditure** (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

This symbol represents environmentally sustainable

not take into

| Aligned with taxonomy: nuclear | Aligned with taxonomy: nuclear |
| | Aligned with taxonomy (excl. gas & nuclear) |
| Aligned with taxonomy (excl. gas & nuclear) | Not aligned with taxonomy |
| Not aligned with taxonomy | |

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? N/A

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

N/A

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy.

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 36.8%.

100%

What investments were included in the "Other" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to the various categories. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the benchmark index?

How did the benchmark index differ from a relevant broad market index?

The fund's benchmark index is the Euro Stoxx Large, a broad market index that is representative of all market sectors and geographical areas.

- How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the environmental or social characteristics promoted?
- The financial product's ESG score is 6.7/10, vs. 6.4 for its index.
- There were no human rights controversies at the end of the period, vs. 1 for the benchmark index.
- There were 42.9% women on boards of directors, vs. 42.5% for the benchmark index.
- At the end of the year, 67.8% of investments were sustainable, vs. 49.0% for the benchmark index.

How has this financial product performed compared to the benchmark index?

The fund returned -4.58%, vs. +9.54% for its benchmark index.

How has this financial product performed relative to the broad benchmark index?

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

N/A

CM-AM INFLATION

<u>The economic environment and market</u>

The markets were fairly active when the year kicked off, when constructive macroeconomic data shifted attention from fears of the Omicron variant to the recovery of the global economy. When growth and inflation figures began to weigh on financial markets in January, central bankers felt pressure to take action to prevent inflation from compromising global growth. In addition, rising commodity prices also worried investors, with oil up 10 to 15% in January, which further pushed up the prices of other commodities. The market then suffered from the first signs of rapidly rising interest rates, with investors expecting key policy rates to rise more quickly than previously thought. This pushed the 10year Bund rate into positive territory at the end of January and caused Christine Lagarde to readjust the ECB's buyback program at a meeting in early February, thus ending the PEPP in March and reducing the APP. However, in mid-February tension between Russia and Ukraine began to mount, culminating in Russia's invasion on the 24th. Very quickly, the Western countries responded with an assortment of sanctions against Russia, which included the exclusion of certain Russian banks from the SWIFT international payment system, the freezing of the Russian central bank's reserves and the suspension of the certification of the Nord Stream 2 pipeline. This caused commodity prices to surge (with oil gaining 30 to 35% from 25/02 to 08/03) and triggered fears of inflation. Central banks quickly responded, with the Bank of England and the Federal Reserve increasing their key rates and the ECB changing the pace of its asset purchase programme (from €40bn in April to €30bn in May and €20bn in June) in anticipation of rate hikes once its programme is completed. European sovereign yields rose sharply in March in the wake of the acceleration of monetary tightening and inflation, despite mounting geopolitical tensions in mid-March resulting from the invasion of Ukraine and concerns about its impact on growth. German 10-year Bund yields rose 41 bp to 0.54% (for a guarterly increase of 80 bp, making the quarter one of the worst in terms of overall Bund performance), while spreads in the peripheral countries fell from 5 to 10 bp. Inflation continued the acceleration which began in September 2021, with headline inflation in January, February and March reaching 5.1%, 5.9% and 7.4% respectively. Core inflation (excluding energy and food) also rose sharply, although remaining below 2.3%, 2.7% and 3%, which reflects a much higher-than-expected transfer of past increases in production costs to consumers. After relative stability early in the year, at around 1.80%, German 10year break-even rates rose sharply with the invasion of Ukraine, rising about 80 bp to end the quarter at 2.64%.

The trend observed in March continued into the 2nd quarter, as investors increasingly factored in the acceleration of monetary tightening-with the Fed strongly suggesting that it could raise rates by 50 bp in the very near future, and the ECB gradually reducing its asset purchases and possibly initiating a cycle of tightening in 2022-and inflationary pressures, despite concerns about growth and the deterioration of the health situation in China. In this risk-averse environment, EU periphery spreads widened by around 20 bp over the month, particularly in Italy. Faced with excessively high inflation, central bankers confirmed that they were no longer willing to postpone rate hikes, which pushed longterm interest rates up further in May. The US economy maintained its resilience despite economic headwinds and tighter financial conditions, which decreased the likelihood that the Fed would pause its rate hikes. A renewed sense of urgency was also observed at the ECB, whose board members increasingly spoke out in favour of more rapid tightening of key rates in response to surprisingly strong increases in headline and core inflation, implying that the inflationary shock was taking root and spreading throughout the economy. At the end of the quarter, weak consumer data intensified fears of a rapid and severe recession in the US, despite initial inflation figures that were still accelerating. Although European yields followed the downward trend of US yields, which shed 50 bp in a fortnight, the German 10-year yield rose 0.79% over the quarter to 1.33%. Headline inflation in the eurozone continued to accelerate, mainly due to still surging energy prices but also to the rising cost of food products. Over the three months from April to June 2022, headline inflation was respectively 7.4%, 8.1% and 8.6%, with core inflation posting similar increases to 3.5%, 3.7% and 3.8% against a backdrop of strong consumer demand and disruptions to global supply chains. Break-even inflation

rates continued to accelerate sharply, rising by almost 35 bp to end the month of April at just under 3% on German 10-year Bunds. This trend then abruptly reversed. Fears about the pace of central bank monetary tightening and the risk of recession, together with the high volume of Treasury issues, triggered a correction of around 40 bp from the high point reached at the end of April 2022. This correction continued in June, with the break-even rate on 10-year German Bunds at about 2% at the end of the quarter.

In the third quarter, sovereign yields did an about-face, as investors factored in fears of recession and began to expect a less lengthy cycle of the monetary tightening. The German 10-year yield fell by 51 bp (to 0.82% on 29 July), after hitting a 2022 high of 1.77% on 21 June. EU periphery spreads widened over the period, particularly in Italy due to political uncertainty. However, in early August robust economic data, a further surge in European energy prices, labour market tensions and anticipated wage rises, along with constant reminders from US central bankers at Jackson Hole that the fight against inflation was far from over, lessened investor fears of recession and expectations of falling inflation, which put pressure on the low levels to which long yields had sunk. Against this backdrop, sovereign yields continued to rebound, with the Bund reaching 1.54% and the spreads of other sovereigns widening against the Bund (+25 bp for Italy) as the yield curve flattened considerably. The market reversal intensified in September, as investor attention once again turned to Italy and its relations with European institutions, the now inevitable recession in Germany (and therefore in the eurozone), China's struggle to recover, further heightening of geopolitical risk, 10% inflation in the eurozone, 75 bp hikes by the ECB and the FED and, to top it all off dissatisfaction with the UK's budget, which heightened credibility risk. Against this backdrop, the German 10-year yield ended the guarter at 2.10%, with spreads in Europe generally stable, except for Italy (+5 bp) and for Austria and Finland (+8 bp). Despite high volatility, the yield curve was stable over the month, except for the 10-30 year segment which flattened further. Eurozone inflation continued to accelerate from July to September, reaching historic highs of 8.9%, 9.1% and 9.9%. Core inflation also rose sharply to 4.0%, 4.3% and 4.8% over this period, confirming the spread of inflationary pressures. Still penalised by the ECB's announcements and fears of recession, Germany's 10-year break-even point fluctuated between 2.0% and 2.5% to end the guarter at the lower limit of this range.

The Q3 GDP figures reported in Q4 showed that economic growth was still resilient against increasingly powerful headwinds. This was mainly attributable to fewer supply chain disruptions and the post-COVID catch-up effect, particularly in Europe, which benefited from the recovery of tourism. In the US, however, weaker survey data and underlying demand implied that a recession was still likely, although this did not prevent the Fed from raising interest rates by a further 75 bp. Inflation in the eurozone was still far too high, forcing the ECB to pursue its monetary tightening. In China, further tightening of COVID-19-related restrictions pushed October PMI indices back into contraction territory. Risk appetite did, however, spread to the sovereign debt market as accumulating signs of recession in the eurozone, the UK and even the US lowered expectations of further key rate rises. Although the ECB did raise its key rates by 75 bp in October, the risk of recession no doubt encouraged it to adopt a less hawkish tone than expected. Against this backdrop, the German 10-year yield fell by 40 bp to 2.14%, with spreads in Europe narrowing against Germany and most notably in Italy (-25 bp). After hitting new annual highs in October, yields fell sharply in November (with German 10-year yields down to 1.96% at the end of the month), thus causing yield curves to flatten further on both sides of the Atlantic and real yields to fall. This may be attributed to the actions of the Fed and the ECB which tended to confirm that they would slow down the pace of future rate hikes, and to the publication of US and eurozone inflation figures, which began to show signs of slowing. In the latter part of the quarter, however, financial markets over-reacted to the mid-December rate increases of the central banks, thus pushing sovereign yields sharply upward and bring the Bund to 2.56% at the end of the year. In the United States, the rise in yields was mainly due to heightened inflation expectations, while the increase in real yields in the eurozone, which brought the 10-year French sovereign yield to 3.10%, is attributable to the rebound in PMI indices and the continued preference of EU central bankers for very restrictive monetary policy in response to additional government aid measures. Following the ECB's announcement of reduced asset purchases, with the exception of Portugal, semi-core and peripheral spreads widened against Germany. Eurozone inflation surged to 10.7% in October, while core inflation also accelerated to 5.0%. Breakeven inflation rates rose from 30 to 50 bp over the month, on the back of high inflation figures and despite fears of recession. Then, in October, the eurozone's inflation rate slowed to 10% year-on-year (vs. 10.6% in October), as energy prices continued to fall from their summer highs. Although stable compared to October, core inflation (i.e. excluding energy and food) was still too high at 5% YoY and confirmed that underlying inflationary pressures were still considerable. At the end of December 2022, headline inflation was 9.20% for the year, while core inflation reached its 2022 peak at 5.20%.

In the first guarter of 2023, global yields began to fall sharply at the long end of the curve as the release of US inflation figures reassured investors that inflation had peaked and brightened the outlook for future monetary tightening. The ECB was not immune to this easing of expectations which contributed to a sharp fall in Italian spreads that was accentuated by an increasingly unlikely scenario of a severe recession in Europe. Although yield curves continued to flatten on both sides of the Atlantic, yields fell more sharply in the eurozone. In February, the resilience of consumer spending and inflation, which were buoyed by wage rises, confirmed investor fears that monetary policy would have to be further tightened to fight inflation. This caused sovereign yields to return to their December 2022 highs, and even exceed them a the short end of the curve, as bond markets had to quickly factor in more rate hikes from the US and European central banks. Near the end of the quarter, the collapse of Silicon Valley Bank, the rescue of Credit Suisse and the slowing US economy made the outlook for the global economy much more uncertain. This however did not prevent the Fed and the ECB from raising their key rates in March, as expected. Stress in the banking sector rekindled risk aversion and triggered a sharp fall in sovereign yields, against a backdrop of flight to guality and lower expectations of further monetary tightening. At the end of March, less fear of systemic risks benefited the riskier asset classes but contributed to an increase in sovereign yields that was underpinned by the still high level of core inflation in the eurozone. Peripheral spreads against Germany were stable. In the first guarter of 2023, headline inflation in the eurozone continued the downward trend that began at the end of 2022, to 8.60% in January, 8.50% in February and 6.90% in March, its lowest level since February 2022. However, this did not diminished concerns about core inflation, which continued to rise over the three months from January to March to 5.30%, 5.60% and 5.70% respectively, mainly due to higher prices for food and services, while energy inflation was subject to negative base effects.

Manager's report

At the start of Q1 2022 we maintained about -15 bp underweight exposure to both German nominal and real yields. We added to European index-linked German 2026, Italian 2026, Spanish 2024 and French 2026. In the middle of the quarter, we sold a short position on German nominal yields at 15 bp and increased our underweight exposure to real yields by about -30 bp, particularly on maturities beyond 5 years. We increased our exposure to German 2023, Spanish 2027, Italian 2026 and French 2024 index-linked bonds (€i) to take advantage of the positive carry trade over the coming months and pressure on energy prices. At the end of the quarter, in view of the very rapid rise in breakeven inflation over just a few weeks, we temporarily trimmed our exposure to inflation while adopting a small underweight in nominal yields in anticipation of further increases in breakeven inflation over the longer term.

In the first month of the 2nd quarter, we trimmed our exposure to 1-year maturities (Bund €1,2023) in favour of intermediate and longer term issues (OAT 2025 and OAT 2031). In May, we then took advantage of the sharp correction in breakeven inflation observed in May 2022 to once again increase our exposure to indexed bonds in the intermediate segment as previously (Germany €i 2026, France €i 2027 and France i 2028) and to sell a long position (Germany 2030) while maintaining a small underweight in peripherals. At the end of the quarter, we took advantage of the rise in real rates following the ECB's meeting to align our exposure to real rates with that of our benchmark index by

buying Germany €i 2030 and France i 2028 and selling France i 2023. We also sold an Italian issue maturing in 2023, while remaining slightly underweight in peripherals.

We began the 3rd quarter of 2022 by taking advantage of attractive breakeven levels to invest in index-linked German 2026 and 2030, French 2026, Italian 2026 and Spanish 2027. We continued to take advantage of attractive breakeven rates in the middle of the quarter by adding to French €i index-linked bonds with intermediate (2024 and 2026) and long (2032) maturities, while selling an Italian issue maturing in 2023. At the end of the quarter, we sold 2023 maturities in Spain and Italy, while maintaining our exposure to index-linked bonds given our expectations of high inflation for some time.

Early in Q4, we increased our exposure to Italian index-linked bonds maturing in 2032 by selling Italian and Spanish index-linked bonds maturing in 2024. We maintained real duration of about 5 throughout the quarter. In November, we reduced our exposure to very short-dated French and Spanish index-linked bonds.

In Q1 2023, to honour a significant volume of redemptions, we reduced our exposure to index-linked bonds in the intermediate and long segments—such as OAT€i 2027 and 2030, Spain 2027, OAT€i 2032, Italy 2026 and Germany 2026—and to shorter dated index-linked bonds, such as OAT€i 2024 and 2027, OATFRi 2025 and Spain €i 2024. We maintained slightly underweight duration relative to our benchmark index throughout the 1st quarter of 2023.

Performance

The fund's returns over the period from 09/07/2022 to 03/31/2023 were -0.75% for IC units, -0.86% for RC units and -0.75% for S units compared to -0.38% for the benchmark index.

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

- NA

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and

The **investment**

bribery.

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

NA

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How are adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective: In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding
 principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 01/01/2022 to 31/03/2023

| Sector | % of assets | Country |

What was the proportion of sustainable investments?

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments. For funds with a sustainable investment objective:

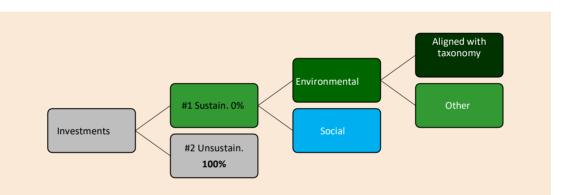

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 0% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities directly held are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors: SOVEREIGN, 100%

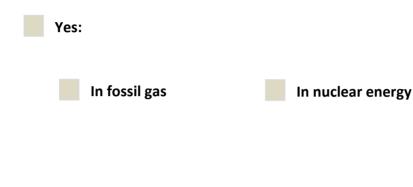

No

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

taxonomy, the criteria for fossil

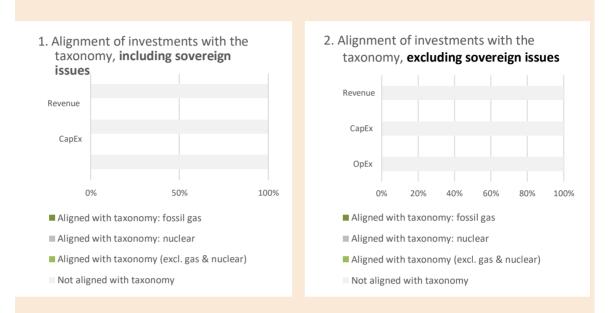

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive rules on

nuclear safety and waste

management.

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance. The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign issues^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign issues, while the second graph shows the alignment of all investments excluding sovereign issues.

*In the above charts, 'sovereign issues' include all sovereign exposures.

- **What proportion of investments were made in transitional and enabling activities?** NA
- How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 0%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 0%.

Investments aligned with the taxonomy Other investments

- Revenue, to measure the share of revenue obtained from the green activities of investee companies;
- Capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

What investments were included in the "Others" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the sustainable benchmark index?

NA

NA

- NA

CM-AM GLOBAL LEADERS

This fund of leading companies and brands managed to keep a steady course in turbulent markets and did slightly better than its benchmark index. The fund's RC, S, IC and ER unit classes posted returns of -3.01%, -2.23%, -2.03% and 3.01% respectively. In comparison, the MSCI ACWI NR index of global stock markets fell by 5.2%.

Just as supply chains were struggling to get back up and running, after triggering inflationary pressures in the semiconductor and other industries, the outbreak of war in Ukraine took the problem of supply shortages to another level. The political order that was established at the end of the Cold War is breaking up, as are the long-standing relationships between energy users and suppliers. Making the fight against inflation their main priority, central banks have tightened their monetary policies. In the United States, real interest rates rose above zero, after several years in negative territory.

This upward trend in interest rates is not good for long-duration financial assets, such as blue-chip and other high-quality equities, which underperformed over the first 9 months of the year, as investors turned their attention to the likely beneficiaries of the new world order—energy, defence and gold stocks—and to lesser valued securities, such as financials.

2023 began with some auspicious developments—such as the reopening of China, more attractive valuations and energy stimulus plans—although fears of recession are growing and encouraging investors to prefer companies that are most likely to meet their forecasts. The recovery of blue-chip stocks with strong balance sheets and high pricing power is consistent with our global leaders investment theme.

The three biggest detractors from the fund's performance over the year were Amazon, Alphabet and Adobe, while the French brands LVMH, Hermès and L'Oreal once again stood head and shoulders above the rest.

The investment team was very active throughout the year. After the relative underperformance incurred from the fund's absence from the defence, energy and utilities sectors, and the reduction of its exposure to technology leaders, such as Adobe, Netflix and Paypal, which were undergoing strategic changes that were difficult to understand, the fund also sold its positions in Carlsberg and Morgan Stanley, which were weakened by the new environment.

Taking advantage of lower valuations, we added to companies whose growth is driven by strong secular trends, such as automation for Schneider, or the fight against obesity for Eli Lilly and Novonordisk. In healthcare and water services, we favour United Health and the new Xylem–Evoqua group, while in the semiconductor segment our preference goes to ASML.

In July, the fund began to increase its positions in Asia, which is expected to grow more rapidly and with lower inflation over the coming years. This is being achieved not only through investment in Asian companies, but also via European luxury groups, such as LVMH and Moncler. In the consumer sector, brewer Budweiser Apac, restaurant operator Yum China and car manufacturer BYD were added to the portfolio. Among industrials, we invested in Daikin (air conditioning) and Fanuc (robotics), while our preference in the banking sector was India's leader HDFC. In addition to being led by top-quality management teams, all of these companies offer high pricing power, strong balance sheets and sustainable valuations.

The investment team continued to be very selective. Political skirmishes are proliferating, and the January 2024 elections in Taiwan and the November elections in the USA promise to be eventful. Finally, the Jackson Hole meeting of US central bankers in August 2023 will give the proponents of monetary orthodoxy and stock market complacency much to debate. More than ever, the investment team focuses on solid global leaders that are able to outperform under these market conditions. In addition, our SRI approach accentuates our focus on sustainable growth, which means being attentive to global challenges.

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. It also promotes environmental and social characteristics by aiming to outperform two of the key sustainability performance indicators of its ESG universe: carbon intensity and companies with a human rights policy.

What were the results of sustainability indicators?

This financial product's sustainability indicators are the ESG score, carbon intensity (performance indicator 1) and having a policy to improve gender diversity on the board of directors (performance indicator 2).

- The financial product's ESG score is 6.0/10
- The carbon intensity (scope 1+2) was 95.78 tCO2/€m of Rev. at the end of the period
- The governance indicator (i.e. the % of women on boards of directors) was 33.3% at the end of the period.
- The proportion of sustainable investments is 44.7%.

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

This financial product has a minimum investment requirement of 30% in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective: In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

Principal adverse

impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 31/03/2022 to 31/03/2023

_

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

What was the proportion of sustainable investments?

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments. For funds with a sustainable investment objective:

The financial product has committed to a minimum of 30% sustainable investments relative to total fund assets.

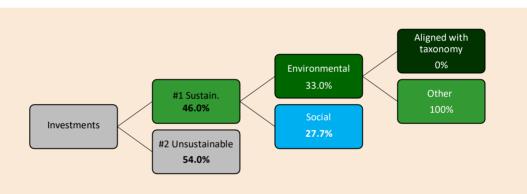

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

| Consumer discretionary | 26.79% |
|------------------------|--------|
| Technology | 16.14% |
| Financial | 14.52% |
| Consumer staples | 11.78% |
| Healthcare | 11.34% |
| Industrial | 8.61% |
| Communication | 4.38% |
| Industry | 3.78% |

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

taxonomy, the criteria for fossil

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive rules on

nuclear safety and waste

management.

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

X No

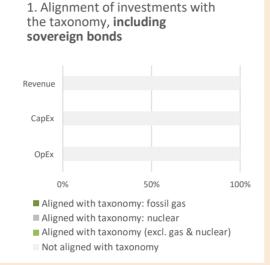

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

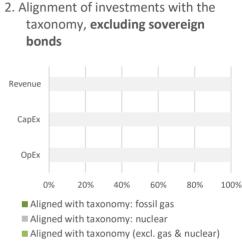

Investments aligned with the taxonomy Other investments

- Revenue, to measure the share of revenue obtained from the green activities of investee companies;
- Capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy.

Not aligned with taxonomy

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 27.7%.

What investments were included in the "Others" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the sustainable benchmark index?

How did the benchmark index differ from a relevant broad market index?

The fund's benchmark index is the MSCI All Country World index in euros with net dividends reinvested, which is a broad market index that is representative of all economic sectors and regions.

How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the environmental or social characteristics promoted?

- The financial product's ESG score is 6.0/10, vs. 5.5/10 for its index
- The carbon intensity (scope 1 and 2) is 95.78 tCO2/€m of Rev. at the end of the period, vs. 160.83 tCO2/€m of Rev. for its benchmark index.
- There were no red human rights controversies at the end of the period, vs. 12 for the benchmark index
- The proportion of sustainable investments at the end of the period was 44.7%, vs. 54% for its index.

How has this financial product performed relative to the benchmark index?

The CM-AM Global Leaders fund returned -3.0% (C unit class) over the period, vs. -6.78% for its benchmark index, the MSCI All Country World index in euros with dividends reinvested.

How has this financial product performed relative to the broad benchmark index?

NA

indices are used to measure whether the financial product achieves its sustainable investment objective.

Benchmark

CM-AM GREEN BONDS

The 2022-2023 financial year was marked by the outbreak of a war at the eurozone's borders that is still underway, a resurgence of inflation (particularly in energy and food prices), and the implementation of more restrictive monetary policy on the part of central bankers.

The trend observed in March continued into the second quarter of 2022, as monetary tightening was stepped up—with the Fed sending strong signals that a 50 bp hike was soon likely, and the ECB gradually unwinding its bond balance sheet and possibly initiating its first rate hike in 2022—and inflationary pressures intensified, despite fears of slowing growth and a deteriorating health situation in China. In this risk-averse environment, EU periphery bond spreads widened by about 20 bp over the month, particularly in Italy.

In the credit market, spreads widened across all rating categories, and particularly on the lowest rated issues. Faced with excessively high inflation, central bankers confirmed that they were no longer willing to postpone rate hikes, which pushed long-term interest rates up further in May. The US economy maintained its resilience despite economic headwinds and tighter financial conditions, which decreased the likelihood that the Fed would pause its rate hikes.

The ECB's sense of urgency was also heightened by the new upward surprise in headline and core inflation, a sign that the inflationary shock is spreading more and more widely through the economy, with ECB members increasingly speaking out in favour of a more rapid tightening of key rates. At the end of the quarter, weak consumer data intensified fears of a rapid and severe recession in the US, despite initial inflation figures that were still accelerating. European yields followed the downward trend in US yields, which shed 50 bp in a fortnight, however the German 10-year yield rose by a total of 0.79% over the quarter to 1.33%. Against this backdrop of risk aversion, credit was severely punished, as were peripheral spreads but to a lesser extent, with the French 10-year OAT also underperforming German sovereign debt by about 15 bp as the 2-to-10-year segment of Germany's yield curve steepened.

In the third quarter of 2022, sovereign yields did an about-face, as investors factored in fears of recession and began to expect a less lengthy cycle of monetary tightening. The German 10-year yield fell by 51 bp (to 0.82% on 29 July), after hitting a 2022 high of 1.77% on 21 June. EU periphery spreads widened over the period, particularly in Italy due to political uncertainty. According to our Cash indices, credit spreads eased significantly, by over 30 bp for Investment Grade and slightly less for High Yield, confirming investor caution with regard to lower-rated issuers. The ECB has now stopped its net purchases under both the APP and PEPP programmes. However, in early August robust economic data, a further surge in European energy prices, labour market tensions and anticipated wage rises, along with constant reminders from US central bankers at Jackson Hole that the fight against inflation was far from over, lessened investor fears of recession and expectations of falling inflation, which put pressure on the low levels to which long yields had sunk. Against this backdrop, sovereign yields continued to rebound, with the Bund reaching 1.54% and the spreads of Credit and other sovereigns widening against the Bund (+25 bp for Italy) as the yield curve flattened considerably. The market reversal intensified in September, as investor attention once again turned to Italy and its relations with European institutions, the now inevitable recession in Germany (and therefore in the eurozone), China's struggle to recover, further heightening of geopolitical risk, 10% inflation in the eurozone, 75 bp hikes by the ECB and the Fed and, to top it all off dissatisfaction with the UK's budget, which heightened credibility risk. Against this backdrop, the German 10-year yield ended the quarter at 2.10%, with country spreads stable against the Bund except for Italy (+5 bp) and Austria and Finland (+8 bp), unlike Credit, which continued to widen. Despite high volatility, the yield curve was stable over the month, except for the 10-30 year segment which flattened further.

The Q3 GDP figures reported in the last quarter of 2022, showed that economic growth was still resilient against increasingly powerful headwinds. This was mainly attributable to fewer supply chain disruptions and the post-COVID catch-up effect, particularly in Europe, which benefited from the recovery of tourism. In the US, however, weaker survey data and underlying demand implied that a

recession was still likely, although this did not prevent the Fed from raising interest rates by a further 75 bp. Inflation in the eurozone was still far too high and likely to force the ECB to pursue its monetary tightening. In China, further tightening of COVID-19-related restrictions pushed October PMI indices back into contraction territory. Risk appetite did, however, spread to the sovereign debt market as accumulating signs of recession in the eurozone, the UK and even the US lowered expectations of further key rate rises. Although the ECB did raise its key rates by 75 bp in October, the risk of recession no doubt encouraged it to adopt a less hawkish tone than expected. Against this backdrop, the German 10-year yield fell by 40 bp to 2.14%, with country spreads narrowing against Germany (notably Italy -25 bp), and Credit still doing well. After hitting new annual highs in October, yields fell sharply in November (with German 10-year yields down to 1.96% at the end of the month), thus causing yield curves to flatten further on both sides of the Atlantic and real yields to fall. This may be attributed to the actions of the Fed and the ECB which tended to confirm that they would slow down the pace of future rate hikes, and to the publication of US and eurozone inflation figures, which began to show signs of slowing. This environment continued to support the momentum in the credit market, with cash and synthetic spreads in the high-yield segment falling by as much as 100 bp, implying that investors had regained their appetite for risk. In the latter part of the quarter, however, financial markets over-reacted to the mid-December rate increases of the central banks, thus pushing sovereign yields sharply upward and bringing the German Bund to 2.56% at the end of the year. In the United States, the rise in yields was mainly due to heightened inflation expectations, while the increase in real yields in the eurozone, which brought the 10-year French sovereign yield to 3.10%, is attributable to the rebound in PMI indices and the continued preference of EU central bankers for very restrictive monetary policy in response to additional government aid measures. Following the announcement of reductions in ECB purchases, semi-core and peripheral spreads excluding Portugal widened against Germany, unlike credit spreads, and financial spreads in particular, which continued to narrow.

At the beginning of the last quarter of the 2022-2023 financial year, global yields began to fall sharply at the long end of the curve as the release of US inflation figures reassured investors that inflation had peaked, which brightened the outlook for future monetary tightening. The ECB was not immune to this easing of expectations, which contributed to a sharp fall in Italian spreads that was accentuated by an increasingly unlikely scenario of a severe recession in Europe. Although yield curves continued to flatten on both sides of the Atlantic, yields fell more sharply in the eurozone. The credit market was much more active than usual, with issues of over €80bn by financials and €43bn by corporates. Despite this abundance of issues, Investment Grade credit spreads narrowed somewhat, by about 10 bp. In February, the resilience of consumer spending and inflation, which were buoyed by wage rises, confirmed investor fears that monetary policy would have to be further tightened to fight inflation. This caused sovereign yields to return to their December 2022 highs, and even exceed them at the short end of the curve, as bond markets had to quickly factor in more rate hikes from the US and European central banks. Credit spreads continued to narrow, with High Yield outperforming Investment Grade. Near the end of the quarter, the collapse of Silicon Valley Bank, the rescue of Credit Suisse and the slowing US economy made the outlook for the global economy much more uncertain. This however did not prevent the Fed and the ECB from raising their key rates in March, as expected. Stress in the banking sector rekindled risk aversion and triggered a sharp fall in sovereign yields, against a backdrop of flight to quality and lower expectations of further monetary tightening. At the end of March, less fear of systemic risks benefited the riskier asset classes but contributed to an increase in sovereign yields that was underpinned by the still high level of core inflation in the eurozone. Peripheral spreads remained stable against Germany, unlike credit spreads, particularly for financial issuers, which widened sharply as the yield curve steepened. The German 10-year yield ended the 1st quarter at 2.29% with Investment Grade spreads at 92 bp.

Regarding our investment policy, we continued to select only green bonds for our portfolio. At 31 March 2022, they accounted for 92.91% of our fund's assets, with the remainder invested in cash and cash equivalents.

Interest rate risk remained high throughout the year, rising from 6.32 to 6.47; a level that is consistent with the long maturities associated with project financing.

The proportion of government securities declined somewhat, from 39.5% to 35.1% of the total.

Changes made to the portfolio as a result of ESG analysis, particularly with regard to environmental criteria:

Since the sub-fund's objective is to invest in the green bond market, its portfolio is almost exclusively invested in companies that finance projects that offer environmental benefits. Our investment decisions therefore prioritise environmental characteristics.

The sub-fund's unit classes posted the following returns:

- RC unit class: -9.36%
- IC unit class: -9.25%

ESG approach

Article 9 SFDR - taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

Product name: CM AM Green Bonds Legal entity identifier: 96950023VOG4Q9TONZ41

A sustainable

investment is an investment in an economic activity t hat contributes to an environme ntal or social objective, provi ded that Sustainable investment objective

the investment does no significant harm to either of these obj ectives and that the company in which the investment is made observes good governance practices.

The EU taxonomy is a classification system established under Regulation (EU) 2020/852, which lists environmentally sustainable economic activities. This regulation does not include socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

The sustainable investment objective is the ecological and energy transition. The Green Bonds selected, which are the fund's unique investment vehicle, allocate capital to projects that are consistent with this transition objective. The sustainability indicators employed are used to assess these bonds and their issuers. Over 90% of the portfolio was continuously invested in Green Bonds over the 2022-2023 financial year, the only exception being cash assets, which constituted less than 10% of the portfolio.

Sustainability indicators
measure to what extent
the financial product has
achieved its
sustainability objectives.The sustainable investme
are the fund's unique inv
objective. The sustainabil
the portfolio was continu

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are:

- The proportion of sustainable investments
- The ESG score.

The proportion of sustainable investments in the portfolio at 31 March 2023 was 92.91%. These investments were exclusively in Green Bonds. Their weighting in the portfolio always exceeded 90% throughout the financial year. The rest of the portfolio consisted of cash assets.

Green Bonds are selected on the basis of a dual analysis of issuers and the securities issued (i.e. the projects financed).

Issuers and securities are scored on a scale of 1 to 4. No Green Bond may enter the portfolio with a score of less than 2.

A strict selection of Green Bonds has been made. As a result, on 31 March 2023 the average score was 3.37 and no bond scored less than 3.

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

This financial product has a minimum investment requirement in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How are adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective: In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 01/04/2022 to 31/03/2023

| The largest investments | Sector | % of assets | Country |
|-------------------------------|----------------|-------------|---------------|
| The Kingdom of Belgium | Sovereign | 6.81% | Belgium |
| The Republic of Ireland | Sovereign | 6.27% | Ireland |
| European Union | Supranational | 5.89% | Supranational |
| The Kingdom of Netherlands | Sovereign | 4.87% | Netherlands |
| The Kingdom of Spain | Sovereign | 4.66% | Spain |
| The Republic of France | Sovereign | 3.83% | France |
| RATP | Transportation | 3.35% | France |
| Alliander | Utilities | 3.23% | Netherlands |
| Icade | Real estate | 2.95% | France |
| BBVA | Banking | 2.85% | Spain |

What was the proportion of sustainable investments?

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments. For funds with a sustainable investment objective: **For funds with a sustainable investment objective:** The financial product has committed to a minimum of 100% sustainable investments relative to total fund assets.

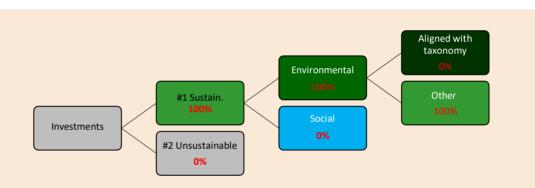

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

- Sovereigns
- Utilities
- Banking
- Transportation
- Real estate

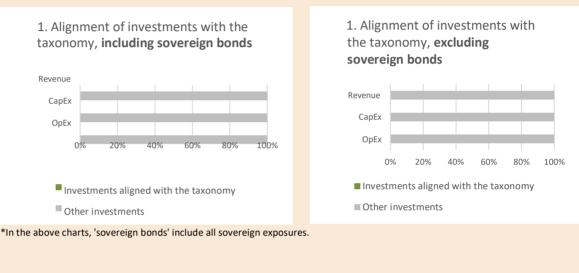

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 0%.

Enabling activities

directly enable other activities to make a substantial contribution to achieving an environmental objective.

Transitional activities are activities for which lowcarbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

This symbol

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

NA

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These controls ensure compliance with the scoring criteria for Green Bond selection.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the benchmark index?

NA

NA

NA

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

CM-AM ENTREPRENEURS EUROPE

Manager's report

Over the period, the sub-fund's C units (FR0013266624) returned -13.75%, its I units (FR0013266640) -12.93%, and its S units (FR0013298759) -13.14%. In comparison, the Europe Stoxx Small ex UK index dividends reinvested (Bloomberg code SCXG) was down 9.9%.

The sub-fund saw substantial redemptions, representing 18.6% of its assets under management.

On 31 March 2023, its assets under management totalled €266m.

The five largest contributors to performance

Moncler (+ 71.5%), thanks to the strong momentum of the luxury goods sector and the reopening of China.

- Sopra Stéria (+21.3%), largely due to investor recognition of the quality of its management.
- Fortnox (+25.8%), which has steadily increased its sales volume and prices. We have significantly reduced our position however, due to the company's high valuation.
- Royal Unibrew (+18.5%). Despite lagging other brewers in terms of financial performance, it should benefit from the recovery of profit margins.
- Interpump (+13.8%), which has continued to grow, both organically and through acquisition.

Other significant contributors were Sixt, Carel Industries, D'ieteren, Autogrill and Andritz.

The five largest detractors

- Nemetschek (-45.6%), with growth that failed to justify an excessively high valuation. We sold our position.
- Kingspan (-28.9%), which suffered from diminished revenue prospects in the second half of 2022. Kingspan continues to deal with rising materials costs quite effectively however and we still strongly believe in its potential.
- Tomra (-32.2%), mainly as a result of an excessively high valuation. We have reduced our position
- Sinch (-57.8%), which failed to confirm the strength of its business model and the successful integration of acquisitions. We sold our position.
- Amplifon (-20.6%), whose growth and margins were still strong, but was overvalued.

Other significant detractors were Alk Abello, Rovi, Nexy Reply and OVH Cloud.

Main changes to the portfolio

We continued to sell overvalued growth companies, such as Nemetschek, Evotec, Sinch, Belimo, Interroll and QT group. We initiated positions in Sopra Steria and Royal Unibrew in particular, whose growth prospects were undervalued.

Our largest holdings at 31/03/2023

Amplifon, Moncler, Kingspan, Bechtle, Reply, Barry Callebaut, Sraumann, Nexi, Sixt and Carl Zeiss Meditech.

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Sustainable It has made sustainable investments with an It promoted E/S features but did investments with a social environmental not make sustainable objective are not objective: % necessarily aligned investments with the taxonomy.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

This financial product promotes environmental and social characteristics by seeking to improve its ESG score. The portfolio's ESG score (weighted average by asset weight) must therefore exceed that of its benchmark universe, once the 20% of issuers with the lowest ESG scores are excluded.

The financial product's ESG score over the financial year was 5.3/10, while that of its benchmark universe was 5.0/10. The fund has therefore achieved the environmental and social characteristics it promotes via the ESG score.

What were the results of sustainability indicators?

The financial product's sustainability indicator is the ESG score.

The financial product's ESG score at 31/03/2023 was 5.3/10

The ESG score once again exceeded that of the benchmark universe.

... and in comparison with prior periods?

| - | Consumer | 11% |
| - | Utilities | 1% |
| - | Auto | 1% |
| - | Energy | 1% |
| | | |

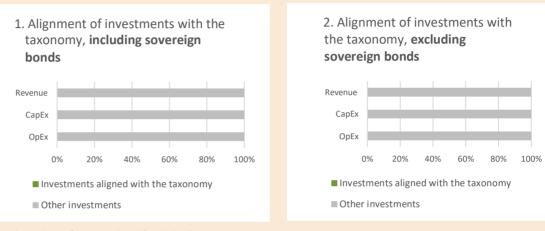

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 27.1%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 34.5%.

Enabling activities directly enable other

activities to make a substantial contribution to achieving an environmental objective.

Transitional activities are activities for which lowcarbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

This symbol

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

CM-AM GLOBAL INNOVATION

Manager's report

After years of excellent returns, your fund of innovative companies posted a loss for the year, as sharply rising interest rates weighed heavily on the valuation premiums of its high-growth stocks. The RC, S and IC unit classes respectively fell by 10.49%, 10.22% and 10.04%.

In comparison, the benchmark MSCI AC World index denominated in euros with dividends reinvested returned -5.20%.

Just as supply chains were struggling to get back up and running, after triggering inflationary pressures in the semiconductor and other industries, the outbreak of war in Ukraine took the problem of supply shortages to another level. The political order that was established at the end of the Cold War is breaking up, as are the long-standing relationships between energy users and suppliers. Making the fight against inflation their main priority, central banks have tightened their monetary policies. In the United States, real interest rates returned above zero, after several years in negative territory.

These conditions are highly unfavourable for innovative companies, which are characterised by strong revenue growth, but volatile earnings growth. The fund's under-performance is also attributable to the inherent allocation of its portfolio, which has little exposure to the more defensive energy, utilities, pharmaceuticals and consumer staples sectors.

After substantially underperforming over the last three quarters of 2022, our selection of innovative stocks began to recover in the first quarter of calendar 2023. This is no doubt explained by renewed investor enthusiasm in response to the reopening of China's economy, more attractive valuations and energy stimulus plans. Innovative companies are also less exposed to the risk of a recession, as their growth is mainly based on their capacity to innovate. When investors think that interest rates and inflation will increase over the long term they tend to avoid companies whose growth would suffer in the event of a recession.

The main detractors from the fund's performance over the year were those companies most exposed to the business cycle, such as Alphabet (advertising), Recruit (technology employment market), Xpeng (Chinese consumer spending), Cap Gemini (consulting) and Intuitive Surgical (higher financing costs for its Da Vinci robotic surgical systems). The biggest contributors to performance were companies that benefited from defensive or well-established growth trends, such as Synopsis (semiconductor design), Mercadolibre (Latin American e-commerce), Palo Alto Networks (cybersecurity), which was purchased during the year, Ansys (software design) and Enphase (solar energy).

The investment team was very active throughout the year. After reducing its positions in stocks that were deemed most vulnerable to a disruption in the market environment, the fund took advantage of falling valuations to seize specific opportunities. These included Siemens (exposure to business cycle), Adobe (after a dilutive acquisition), Medtronic (disappointing execution), Shopify and Netflix (new strategies).

In July, the fund increased its exposure to Asia, for which stronger growth and lower inflation are expected over the next few years. This involved purchasing Alibaba, TSMC, Keyence and Sea. The fund took advantage of buying opportunities to add to AMD (which took market share from Intel), Nvidia (good long-term prospects for GPUs) and Rockwell (after repatriation of production lines to the US). The additions to the portfolio were mainly companies with solid profits and growth that is fuelled by fundamental economic trends. In addition to cybersecurity group Palo Alto Networks, we invested in

IQVIA, whose health data is advancing global clinical research, and Motorola Solutions, whose comprehensive low-frequency radio solutions are effective in all environments.

The investment team is still very selective. Political skirmishes are proliferating, and the January 2024 elections in Taiwan and the November elections in the USA promise to be eventful. In the meantime, the Jackson Hole meeting of US central bankers in August 2023 will give the proponents of monetary orthodoxy and stock market complacency much to debate. Nevertheless, given the current trends of onshoring, digitalisation, decarbonisation and artificial intelligence the outlook for innovative companies is bright and we will patiently be looking for new opportunities.

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

Product name: Global Innovation Legal entity identifier: 969500N07VRAXOEYDA43

A sustainable Sustainable investment objective investment is an investment in an economic activity that contributes to an Does this financial product have a sustainable investment objective? environmental or social objective, provided that X No the investment does no Yes significant harm to It has made **sustainable** It promoted environmental and social (E/S) either of these objectives and that the investments with an characteristics and, although it did not have company in which the environmental objective: a sustainable investment objective, it had a investment is made % minimum proportion of 5% sustainable observes good governance practices. investments: with an environmental objective in economic in economic activities that are The EU taxonomy is activities that are considered considered environmentally a classification environmentally sustainable under the EU sustainable under the EU system established taxonomy taxonomy under Regulation (EU) 2020/852, in economic activities that are which lists environmentally not considered X with an environmental objective in sustainable environmentally sustainable economic activities that are not considered economic activities. under the EU taxonomy environmentally sustainable under the EU This regulation does taxonomy not include socially sustainable X economic activities. with a social objective Sustainable It has made sustainable investments with an investments with a social environmental It promoted E/S features but did objective are not objective: __% necessarily aligned not make sustainable with the taxonomy. investments

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. The ESG indicator used is the fund's average carbon score, which must be superior to that of its benchmark, the MSCI AC World Index.

What were the results of sustainability indicators?

This financial product's sustainability indicators are the ESG score, the portfolio's carbon score and the proportion of sustainable investments.

- The financial product's ESG score is 5.3/10
- The financial product's carbon score is 2.9/5.
- The proportion of sustainable investments at the end of the period is 62.4%.

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

This financial product has a minimum investment requirement of 5% in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective: In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding
 principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

Principal adverse impacts are the most

significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 31/03/2022 to 31/03/2023

What were the financial product's main investments?

| The largest investments | Sector | % assets | Country |
|-------------------------|--------------------|----------|---------|
| MICROSOFT | MEDIA&TECHNO | 4.77% | US |
| SYNOPSYS INC. | MEDIA&TECHNO | 4.13% | US |

| SERVICENOW | MEDIA&TECHNO | 2.98% | US |
| T-MOBILE US | TELECOMMUNICATION | 2.89% | US |
| ALPHABET CL.C | MEDIA&TECHNO | 2.84% | US |

_

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

What was the proportion of sustainable investments?

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments. For funds with a sustainable investment objective:

The financial product has committed to a minimum of 5% sustainable investments relative to total fund assets.

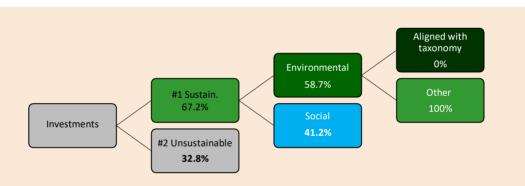

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

| Technology | 58.2% |
|------------------------|-------|
| Communication | 9.6% |
| Industrial | 9.0% |
| Healthcare | 7.9% |
| Consumer discretionary | 7.0% |
| Financial | 6.6% |
| Consumer staples | 1.7% |
| | |

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

the end of 2035.

management.

taxonomy, the criteria for fossil

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by

For **nuclear energy**, the criteria include comprehensive rules on

nuclear safety and waste

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

X No

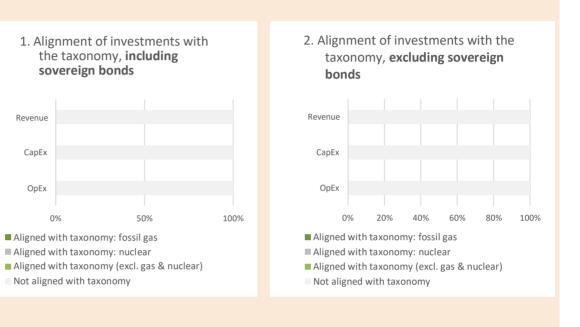

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

- Revenue, to measure the share of revenue obtained from the green activities of investee companies;
- Capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

- What proportion of investments were made in transitional and enabling activities? NA
- How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 41.2%.

What investments were included in the "Others" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second-and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the sustainable benchmark index?

How did the benchmark index differ from a relevant broad market index?

The fund's benchmark index is the MSCI All Country World index in euros with net dividends reinvested, which is a broad market index that is representative of all economic sectors and regions.

How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the environmental or social characteristics promoted?

- The financial product's ESG score is 5.3/10, vs. 5.5/10 for its index
- The financial product's carbon score is 2.9 vs. 3.1 for its index
- The carbon intensity (scope 1+2) is 20.68 tCO2/€m of Rev. at the end of the period, vs. 160.83 tCO2/€m of Rev. for its benchmark index.
- There were no red human rights controversies at the end of the period, vs. 12 for the benchmark index
- The proportion of sustainable investments at the end of the period is 62.4%, vs. 54% for the index.

How has this financial product performed relative to the benchmark index?

The CM-AM Global Innovation fund returned -10.5% (C unit class) over the period, vs. -5.2% for its benchmark index, the MSCI All Country World index in euros with dividends reinvested.

How has this financial product performed relative to the broad benchmark index?

indices are used to measure whether the financial product achieves its sustainable investment objective.

Benchmark

CM-AM HIGH YIELD 2024

Management commentary

Early in the year, the Russian army's invasion of Ukraine triggered a surge in energy and agricultural commodity prices that propelled inflation in the United States and Europe to levels not seen since the 1980s. Against this backdrop, European sovereign yields have risen significantly in anticipation of rapid monetary tightening, despite fears about the pace of growth, the health situation in China and the conflict in Ukraine. The markets are factoring in several rate hikes by the Fed and an initial increase of 25 bp by the ECB in July 2022.

Although fears of recession became the dominant concern in the second quarter of the year, the US Federal Reserve continued its aggressive monetary tightening to combat soaring inflation, raising its base rate by a further 75 bp to 2.25%. The ECB signalled the end of negative interest rates by increasing its key rate 50 bp, and not by 25 bp as announced in June, for its first rate hike in 10 years. US GDP contracted for the second consecutive quarter, marking a technical recession, while leading indicators in Europe deteriorated sharply. As a result, the market is anticipating fewer future rate hikes, and even rate cuts as early as 2023. This trend is benefiting Euro credit spreads, with the June spread on Investment Grade almost fully retraced and the High-Yield spread by about half. After reaching a low point at the beginning of August, long-term yields began to rebound on the back of good economic data, a further surge in energy prices in Europe, labour market tensions and the comments of central bankers, who, right up to the Jackson Hole meeting, were constantly reminding us that the fight against inflation was far from over. The month of September was marked by the return of Italian risk, with concerns over relations between Italy and EU institutions, an inevitable recession in Germany, China's struggle to revive its economy, mounting geopolitical risk, 10% inflation in the eurozone, and 75 bp rate hikes by the ECB and the Fed. GDP figures for the third quarter of 2022 show resilient growth, particularly in Europe which is benefiting from the recovery in tourism, although inflation is still too high. In the United States, a further 75 bp rise in the Fed's key rate is still expected, despite weakening survey data and demand, which heighten the risk of recession. Risk appetite is spreading to the bond market, as the accumulating signs of recession ease expectations of further increases in interest rates.

In third quarter of the year, although the ECB raised its key rate a further 75 bp in October, in light of the risks of recession it adopted a less hawkish tone than expected and made no further commitments to future rate hikes. After hitting new annual highs in October, yields fell sharply in November. The yield curve continued to flatten on both sides of the Atlantic and real yields declined, as investors expected the Fed and the ECB to ease the pace of rate hikes and inflation began to slow. This environment continued to support the credit market's strong momentum, as spreads compressed further, reflecting renewed investor appetite. At the end of December 2022, financial markets continued to digest the announcements of the leading central banks, which caused sovereign yields to surge. In Europe, the rebound in PMI indices and the still hawkish stance of central bankers pushed the German 10-year yield to its highest level of the year.

At the beginning of Q4, global yields began to fall sharply at the long end of the year, as the release of US inflation figures reassured investors that inflation had peaked and that monetary tightening would ease. The ECB was not immune to this lowering of expectations which contributed to a sharp fall in Italian spreads that was accentuated by an increasingly unlikely scenario of a severe recession in Europe. Although yield curves continued to flatten on both sides of the Atlantic, yields fell more sharply in the eurozone. The credit market was much more active than usual, with issues of over €80bn by financials and €43bn by corporates. Despite this abundant issuance, Investment Grade spreads narrowed slightly by about 10 bp. High-yield spreads narrowed by 35 bp overall, with compression between BB and B issuers. In February, economic indicators confirmed the resilience of consumer spending and inflation, both of which were buoyed by rising wages. This confirmed investor fears that more monetary tightening might still be needed to fight inflation. It was against this backdrop that sovereign yields retraced to their December 2022 highs, with short yields even exceeding them, as the market scrambled to factor in the prospect of more rate hikes from the US and European central

banks. In the credit market, the decrease in issuance relative to January is mainly attributable to the anticipation of corporate earnings releases rather than to a lack of investor interest. Credit spreads continued to narrow, with High Yield outperforming Investment Grade. At the end of the year, uncertainty about the global economic outlook increased sharply with the collapse of Silicon Valley Bank, the rescue of Credit Suisse and the slowdown in the US economy. This however did not prevent the Fed and the ECB from raising their key rates in March, as expected. Stress in the banking sector rekindled risk aversion and triggered a sharp fall in sovereign yields, against a backdrop of flight to quality and lower expectations of further monetary tightening. At the end of March, less fear of systemic risks benefited the riskier asset classes but contributed to an increase in sovereign yields that was underpinned by the still high level of core inflation in the eurozone. Peripheral spreads remained stable against Germany, unlike credit spreads, particularly for financial issuers, which widened sharply as the yield curve steepened.

At 31 March 2023, the German 10-year yield ended the year at 2.29% vs. 0.55% a year earlier. Investment Grade spreads ended the year at 92 bp vs. 63 bp at 31/03/2022. In the High Yield segment, spreads ended the year at 362 bp vs. 324 bp a year earlier.

The CM AM HIGH YIELD 2024 sub-fund is mainly invested in speculative grade private sector bonds with maturities that do not exceed 31 March 2025.

At 31 March 2023, 68.8% of the portfolio's net assets were invested in high-yield issuers or funds, 25.5% in investment grade issuers, and the remaining 5.7% in money market funds and cash.

A relatively high level of credit quality was maintained. The portfolio's direct bond investments were mostly BB-rated (54.4%), with B and CCC rated issues accounting for 14.1% and 0.3% respectively.

Geographically speaking, the fund invests solely in issuers of OECD member countries. French issuers dominate the portfolio, at 32.2%, followed by Italy (15.4%) and Germany (11.3%). Exposure outside of the euro zone is mainly concentrated in the United States (5.6%) and the United Kingdom (2.4%). Exposure to emerging OECD countries (Mexico) is incidental, accounting for only 1.7% of net assets.

In terms of sectors, 46% of the portfolio is invested in cyclical corporate issuers, 23% in defensive corporates and 21% in financial issuers other than financing vehicles.

Performance

Between 31 March 2022 and 31 March 2023, the fund posted the following returns:

- -1.4113% for IC units
- -1.6120% for RC units
- -1.6114% for RD units
- -1.4101% for S units

The benchmark index is the OAT 1.75% maturing on 25 November 2024 (FR0011962398). For comparison, the OAT's annual rate of return was 0.25% on 19/10/2018. The benchmark index returned -3.92% from 31 March 2022 to 31 March 2023.

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

Sustainable It has made sustainable investments with an It promoted E/S features but did environmental investments with a social not make sustainable objective are not objective: % investments necessarily aligned with the taxonomy.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

This financial product promotes environmental and social characteristics by seeking to improve its ESG score. This means that the portfolio's ESG score (the asset-weighted average) must therefore be superior to that of its benchmark investment universe.

The financial product's ESG score at the end of the financial year was 5.83/10, while that of its benchmark universe was 5.58/10. The fund has therefore achieved the environmental and social characteristics it promotes via the ESG score.

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are: - the ESG score.

For funds with a sustainable investment objective: *add the proportion of sustainable investments as a sustainability indicator.*

Although the fund does not have a sustainable investment objective, the proportion of sustainable investment is 23.90% of net assets.

The financial product's ESG score of 5.83/10 is a 33-point improvement over the period. This is attributable to a more selective approach to issuers.

The ESG score once again exceeded that of the benchmark universe, mainly due to overexposure issuers who are more committed to ESG practices.

... and in comparison with prior periods?

Issuer selection was improved.

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

For funds with a sustainable investment objective: This financial product has a minimum investment requirement in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

For funds without a sustainable investment objective: NA

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective:

In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

For funds without a sustainable investment objective: NA

Principal adverse

impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 01/04/2022– 31/03/2023

| The largest investments | Sector | % of assets | Country |
|----------------------------|---------------------------|----------------|---------|
| UNION + | Money-market funds | 4.47 | FRANCE |
| BFCM | Finance | 2.65 | FRANCE |
| TELECOM ITALIA SPA | Communication services | 2.25 | ITALY |
| ITALIAN REPUBLIC | Other | 2.18 | ITALY |
| RENAULT SA | Consumer discretionary | 2.13 | FRANCE |
| BNP PARIBAS | Finance | 2.12 | FRANCE |
| ILIAD SA | Communication services | 2.11 | FRANCE |
| LEONARDO SPA | Industry | 2.00 | ITALY |
| THYSSENKRUPP AG | Materials | 1.95 | GERMANY |
| SAIPEM SPA | Energy | 1.89 | ITALY |

What was the proportion of sustainable investments?

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of: **revenue**, to

measure the share of revenue obtained from the green activities of investee companies;

capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;

operating expenditure (OpEx) to measure the green activities of the investee companies

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

For funds with a sustainable investment objective: The financial product has committed to a minimum of 5% sustainable investments relative to total fund assets.

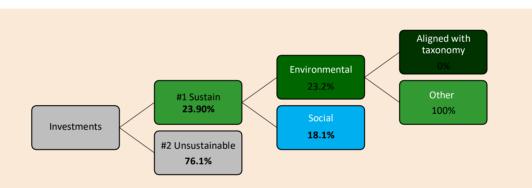

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

- Industry
- Finance
- Consumer discretionary
- Communication services
- Materials

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds*, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

40%

60%

80%

100%

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 18.1%.

directly enable other activities to make a substantial contribution to achieving an

environmental objective.

Enabling activities

Transitional activities are activities for which lowcarbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

CM-AM SHORT TERM BONDS

Management commentary

Post-COVID pandemic supply shortages and the war in Ukraine sent the entire global economy into an inflationary spiral. In Europe, this triggered a gradual increase in swap rates throughout the year. In the first half of the year, the ECB sent a number of signals to the market, making clear its firm intention to raise its key rates in July. With prices steadily rising and growth resilient, the ECB surprised investors with an initial rate hike of 50 bp, which brought the money-market rate close to zero. The summer of 2022 signalled the end of seven years of negative returns on money market funds. The last quarter of 2022 was marked by approximately 10% inflation in the eurozone. Christine Lagarde regularly stated that fighting inflation was her main priority. Unprecedented monetary tightening then followed from July 2022 until March 2023, with six successive rate hikes. This brought the ECB's deposit rate to 3% at the end of the year.

In this inflationary environment, we maintained a low average maturity and relative low exposure to credit. We continued to prefer investments that offered the most liquidity.

Over the year, the fund returned 0.88% vs. 0.69% for Compounded ESTER, the benchmark index.

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

This financial product promotes environmental and social characteristics by seeking to improve its ESG score. This means that the portfolio's ESG score (the asset-weighted average) must therefore be superior to that of its benchmark investment universe.

The financial product's ESG score at the end of the financial year was 6.3/10, while that of its benchmark universe was 5.7/10. The fund has therefore achieved the environmental and social characteristics it promotes via the ESG score.

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are:

- The financial product's ESG score is 6.3/10
- The financial product's ESG score is 5.7/10

The ESG score once again exceeded that of the benchmark universe, mainly due to overexposure to engaged, "best-in-class" issuers.

. and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

For funds without a sustainable investment objective: NA

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds without a sustainable investment objective: NA

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for

human rights and the prevention of

corruption and bribery.

The **investment strategy** ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

What was the proportion of sustainable investments?

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

For funds with a sustainable investment objective: The financial product has committed to a minimum of 5% sustainable investments relative to total fund assets.

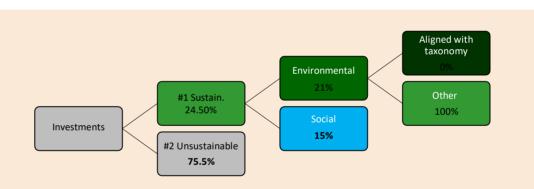

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

- Finance
- Consumer discretionary
- Industry
- Healthcare
- Materials
- Information technologies
- Communication services
- Utilities
- Real estate
- Consumer staples
- Sovereign

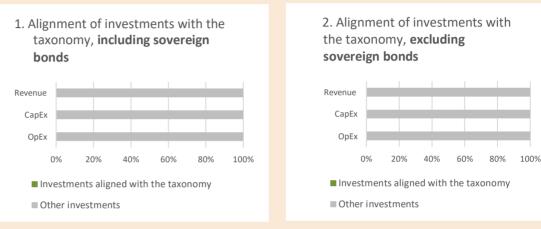

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 21%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 15%.

Enabling activities directly enable other activities to make a

activities to make substantial contribution to achieving an environmental objective.

Transitional activities are activities for which lowcarbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

CM-AM CONVICTIONS EURO

Management commentary

Market performance

Market performance is measured over 12 months and is broken down into the following two periods:

1/ from 31 March 2022 to 31 December 2022

2/ from 31 December 2022 to 31 March 2023

1st period: 2022 was a chaotic year that saw a sharp rise in inflation and interest rates.

After surging 23% in the wake of the post-pandemic rebound of 2021, the EURO STOXX index continued its ascension in the first quarter of 2022. However, this was foiled by geopolitical turmoil and macroeconomic developments. In February, markets were chilled by Russia's invasion of Ukraine and the resulting economic sanctions against Russia. This war accelerated inflation—which had already raised its head in the United States during the recovery that followed the COVID-19 crisis—and triggered a surge in the price of natural gas in Europe.

In response, the main central banks on both sides of the Atlantic began to tighten their monetary policies a few months later. In mid-March, the Federal Reserve raised interest rates for the first time since 2008 (six further rate hikes were to follow). The European Central Bank followed suit in July, with its first rate hike since 2011. At the end of the first half of the year, eurozone equity markets had fallen significantly, as investors increasingly feared the risk of recession. This fear was exacerbated by China's strict restrictions in the name of its government's "zero-Covid" policy, which had been hampering economic activity for several months. After a summer buoyed by solid half-year corporate earnings and upward revisions to full-year earnings forecasts, the EURO STOXX index began to decline under the weight of macroeconomic stress factors, reaching a year-to-date low on 29 September.

It wasn't until after the third quarter, when companies had confirmed their pricing power with earnings that exceeded expectations, that equity markets rallied. But it was above all the prospect of Beijing easing up on its fight against the spread of the COVID-19 virus and the subsequent confirmation that it would abandon its zero-Covid policy that enabled equity markets to recover. In the fourth quarter, the EURO STOXX index regained 13%, after three consecutive quarters in the red, to end this turbulent year with a 12.3% loss, which is still much better than US equity markets, which suffered from the predominance of technology and growth stocks, which are highly exposed to rising interest rates. In 2022, the S&P 500 and Nasdaq Composite indices fell by 19% and 33% respectively.

Against this gloomy backdrop in 2022, defence and energy stocks, which have a small presence in the SRI-labelled fund, clearly topped the performance charts. Growth companies, which include the technology sector, significantly underperformed, due to the sharp rise in interest rates.

2nd period: the first quarter of 2023 saw a recovery in risk assets

European markets closed the 1st quarter of 2023 sharply higher, buoyed by fairly reassuring economic figures, the effective reopening of China and a season of better-than-expected corporate earnings reports. The fall in the prices of commodities, and energy in particular, augurs well for lower inflation and therefore a pause in the cycle of central bank rate rises. However, the market's recovery was limited by the crisis in US regional banks resulting from the collapse of SVB and UBS's hasty takeover of Crédit Suisse in Europe. CM-AM Convictions Euro did well over the quarter, but failed to match the performance of its benchmark index. The best performers among our main holdings were technology, industrial and luxury goods companies exposed to global growth, such as STMicroelectronics (+48.6%), Infineon (+33.7%), LVMH (+24.3%), Thalès (+14.3%) and SPIE (+9.8%). The performance

of financial companies was quite mixed, varying with the strength of balance sheets and between regions, with some positions switched for others. For example, BBVA and Unicredit posted strong gains of 16.6% and 31.2% respectively, while Bankinter returned -15.2%. We are maintaining our positions in this sector in anticipation of the forthcoming dividend payout

Investment from 31 March 2022 to 31 March 2023

In this environment, the fund took advantage of attractive entry points to increase its positions in longstanding holdings that are set to benefit from their exposure to the following long-term trends and sectors:1) the sustainable economy and energy transition (SIEMENS, SCHNEIDER, SAINT-GOBAIN and SPIE); 2) health and life sciences (ASTRA-ZENECA); 3) innovation and new technologies (INFINEON, STM, DASSAULT SYSTEMES, ALTEN and SAP); 4) luxury and well-being (LVMH, HERMES and L'OREAL). In the second half of 2022, the fund increased its exposure to financial stocks that are benefiting from the new paradigm in interest rates and in particular the increase in long-term interest rates, which include BNP, UNICREDIT, BBVA, SANTANDER, AXA, ALLIANZ and MUNICH RE.

Over the 12 months from 31 March 2022 to 31 March 2023, the IC, S and RC unit classes have returned 2.30%, 1.87% and 1.00% respectively. In comparison, the EURO STOXX NET Return index returned 7.70% over the period, which is mainly attributable to the strong performance of the energy and defence sectors.

Portfolio allocation at 31/03/2022

- Equities and funds: 97.5%
- Liquid assets: 2.5%

ESG approach

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation).

Based on the currently available issuer data, the minimum percentage of alignment with the European Union Taxonomy is 0%.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a controversy-monitoring policy to detect companies/securities that are involved in controversies and assess whether they may be maintained in the portfolio or must be excluded;
- A strict sector-based exclusion policy, which among other things excludes controversial weapons.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Sustainable investment objective

A sustainable

investment is an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does no significant harm to either of these objectives and that the company in which the investment is made observes good governance practices.

The EU taxonomy is a classification system established under Regulation (EU) 2020/852, which lists economic activities that are environmentally sustainable. This regulation does not apply to socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

Sustainability indicators are used to measure to what extent the financial product has achieved its sustainability objectives. This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. It also promotes environmental and social characteristics by aiming to outperform two of the key sustainability performance indicators of its ESG universe: carbon intensity and the percentage of women on boards of directors.

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are the ESG score, carbon intensity (performance indicator 1) and the percentage of women on the board of directors (performance indicator 2).

- The financial product's ESG score of 6.4/10 improved by 10 points over the financial year from 31/03/2022 to 31/03/2023. This is attributable to an increased proportion of high-quality companies with good ESG scores.
- Carbon intensity was 128.0% at the end of the financial year. This sustainability indicator had not yet been monitored the previous year.
- The percentage of women on boards of directors was 44.7% at the end of the period. This sustainability indicator had not yet been monitored the previous year.
- The proportion of sustainable investments was 51.8% at the end of the period.

What was the proportion of sustainable investments?

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

The financial product has committed to a minimum of 30% sustainable investments relative to total fund assets.

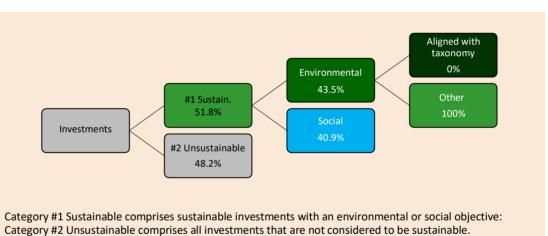

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

In which economic sectors have investments been made?

The investment team mainly looks for companies with solid positions in dynamic markets that are underpinned by major trends that accelerate their growth.

It has identified four major global structural trends:

- Technological innovation and the digitalisation of economic activities, with the development of e-commerce, autonomous cars, industry 4.0, cybersecurity, 5G technology, etc.
- The quest for wellness and improved quality of life, notably through exercise, healthier foods and more comfortable home environments
- The sustainable economy, which includes the energy transition, the circular economy and sustainable mobility, for example by developing renewable energies, smart and interconnected electricity grids, new and greener means of transportation, etc.
- Life sciences and medical progress, with fast-growing niche markets, such as medical tests, hearing aids and ophthalmic surgery.

The **asset allocation** indicates the proportion of investments in specific assets.

Taxonomy-aligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating
 expenditure
 (OpEx), to measure
 the green activities
 of the investee
 companies

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

taxonomy, the criteria for fossil

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive rules on

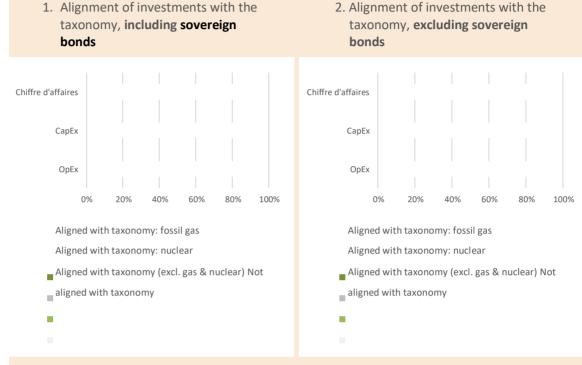

nuclear safety and waste

management.

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

X No

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? $\ensuremath{\mathsf{N/A}}$

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

N/A

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

Socially sustainable investments accounted for 79% of all sustainable investments.

Taxonomy-aligned activities are expressed as a percentage of:

- Revenue, to measure the share of revenue obtained from the green activities of investee companies;
- Capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "Other" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to the various categories. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the benchmark index?

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

How did the benchmark index differ from a relevant broad market index?

The reference universe is consistent with the fund's eurozone omni-cap equity strategy (with all market capitalisations above €200m).

How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the environmental or social characteristics promoted?

The fund holds 51.8% of its total assets in sustainable investments, vs. 42.3% for its benchmark universe. The fund's carbon intensity was 128.0 at the end of the period, vs. 169.8 for its benchmark universe. The percentage of women on the boards of directors of investee companies was 44.7%, vs. 37.0% for the benchmark universe.

How has this financial product performed compared to the benchmark index?

The fund's ESG score exceeded that of its benchmark universe over the period.

How has this financial product performed relative to the broad benchmark index?

The reference universe is consistent with the fund's eurozone omni-cap equity strategy (with all market capitalisation above €200m). The fund's ESG score exceeded that of its benchmark universe over the period.

CM-AM SMALL & MIDCAP EURO

Management commentary

Market performance

Market performance is measured over 12 months and is broken down into the following two periods:

1/ from 31 March 2022 to 31 December 2022

2/ from 31 December 2022 to 31 March 2023

First period: 2022 was a chaotic year that saw a sharp rise in inflation and interest rates

After the post-pandemic rebound of 2021, European equity indices continued their ascension in the first quarter of 2022. However, this bull market was disrupted by geopolitical turmoil and macroeconomic developments. In February, markets were chilled by Vladimir Putin's invasion of Ukraine and the resulting economic sanctions against Russia. This war accelerated inflation—which had already raised its head in the United States during the recovery that followed the Covid crisis— and triggered a surge in the price of natural gas in Europe.

In response, the main central banks on both sides of the Atlantic began to tighten their monetary policies a few months later. In mid-March, the Federal Reserve raised interest rates for the first time since 2008 (six further rate hikes were to follow). The European Central Bank followed suit in July, with its first rate hike since 2011. At the end of the first half of the year, eurozone equity markets had fallen significantly, as investors increasingly feared the risk of recession. This fear was exacerbated by China's strict restrictions in the name of its government's "zero-Covid" policy, which had been hampering economic activity for several months. After a summer buoyed by good half-year corporate earnings and upward revisions to full-year earnings forecasts, European equity indices began to decline under the weight of macroeconomic stress factors.

It wasn't until after the third quarter, when companies had confirmed their pricing power with earnings that exceeded expectations, that equity markets rallied. But it was above all the prospect of Beijing easing up on its fight against the spread of Covid and the subsequent confirmation that it would abandon its zero-Covid policy was to be abandoned that boosted equity markets. In the fourth quarter, European equity indices were thus able to recover some of their losses.

Against this gloomy backdrop in 2022, defence and energy stocks, which are under-represented in the SRI-labelled fund, clearly posted the largest gains, while technology companies and other grow stocks significantly underperformed due to the sharp increase in interest rates.

Second period: the first quarter of 2023 saw a recovery in risk assets.

European markets ended the 1st quarter of 2023 substantially higher, buoyed by generally reassuring economic data, the reopening of China's economy, and an earnings season that once again beat expectations. The fall in the prices of commodities, and energy in particular, augurs well for lower inflation and therefore a pause in the cycle of central bank rate hikes. However, the market's recovery was limited by the crisis in US regional banks resulting from the collapse of SVB and UBS's hasty takeover of Crédit Suisse in Europe. CM-AM SMALL & MIDCAP EURO posted a gain over the quarter. The best performers among our main holdings were technology, industrial and luxury goods companies exposed to global growth, such as ASMI (+57.8%), MONCLER (+28.4%), ALTEN (+25.8%) and MTU AERO ENGINES (+14.1%). In contrast, companies involved in the energy transition came under pressure, as fears of possible shortages in Europe over the winter gradually subsided: ERG (-3.5%), GTT (-5.6%) and ALFEN (-13.2%).

Investment from 31 March 2022 to 31 March 2023

In this environment, the fund took advantage of attractive entry points to increase its positions in its long-standing holdings that are set to benefit from their exposure to the following long-term trends and sectors: 1) the sustainable economy and energy transition (SPIE); 2) the health and life sciences sector (AMPLIFON); 3) innovation and new technologies (GEA, BESI and KRONES); 4) the luxury and well-being sectors (BRUNELLO CUCINELLI and SEB).

From 31 March 2022 to 31 March 2023, the IC, S and RC unit classes returned -9.31%, -9.55% and - 10.29% respectively.

In comparison, the benchmark EURO STOXX Small Net Return - SCXT index declined -4.28% over the period.

ESG APPROACH

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy. Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded,

- A strict sectoral exclusion policy concerning controversial weapons in particular,

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Sustainable investment objective

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators are used to measure to what extent the financial product has achieved its sustainability objectives.

A sustainable

investment is an

This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. It also promotes environmental and social characteristics by aiming to outperform two of the key sustainability performance indicators of its ESG universe: carbon intensity and the percentage of women on boards of directors.

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are the ESG score, carbon intensity (*performance indicator 1*) and the percentage of women on the board of directors (*performance indicator 2*).

- The financial product's ESG score of 5.7/10 improved by 10 points over the financial year from 31/03/2022 to 31/03/2023. This is attributable to an increased proportion of high-quality companies with good ESG scores.
- Carbon intensity was 58.7 at the end of the financial year. This sustainability indicator had not yet been monitored the previous year.
- The percentage of women on boards of directors was 44.3% at the end of the period. This sustainability indicator had not yet been monitored the previous year.
- The proportion of sustainable investments was 40.2% at the end of the period.

... and in comparison with prior periods?

N/A

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

N/A

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

N/A

impacts are the most significant negative impacts of investment decisions on sustainability

factors related to environmental, social

Principal adverse

and human resources issues, respect for human rights and the prevention of corruption and bribery.

The **investment strategy** ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

| | The largest investments | Sector | % of assets | Country |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------|-----------------------------|-------------|-------------|
| This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 31/03/2022 to 31/03/2023 | EURO | Liquidités | 6.43 | |
| | ASM INTERNATIONAL NV | Information technologies | 6.00 | NETHERLANDS |
| | ALTEN | Information technologies | 5.30 | FRANCE |
| | SPIE SA | Industry | 4.07 | FRANCE |
| | SARTORIUS STEDIM BIOTECH | Healthcare | 4.05 | FRANCE |
| | SOITEC | Information technologies | 3.81 | FRANCE |
| | CARL ZEISS MEDITEC AG | Healthcare | 3.39 | GERMANY |
| | FINECOBANK SPA | Finance | 3.26 | ITALY |
| | MTU AERO ENGINES AG | Industry | 3.11 | GERMANY |
| | AMPLIFON SPA | Healthcare | 3.03 | ITALY |

What was the proportion of sustainable investments?

How were assets allocated?

The **asset allocation** indicates the proportion of investments in specific assets.

Taxonomy-aligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital
 expenditure
 (CapEx), to
 measure the green
 investments made
 by the investee
 companies, for
 example for the
 green transition;
- operating expenditure (OpEx), to measure the green activities of the investee companies

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

The financial product has committed to a minimum of 30% sustainable investments relative to total fund assets.

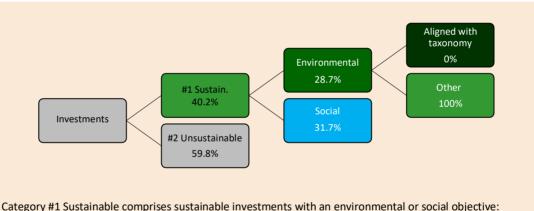

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category #2 Unsustainable comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

The investment team mainly looks for companies with solid positions in dynamic markets that are underpinned by major trends that accelerate their growth.

It has identified four major global structural trends:

- Technological innovation and the digitalisation of economic activities, with the development of e-commerce, autonomous cars, industry 4.0, cybersecurity, 5G technology, etc.
- The quest for wellness and improved quality of life, notably through exercise, healthier foods and more comfortable home environments
- The sustainable economy, which includes the energy transition, the circular economy and sustainable mobility, for example by developing renewable energies, smart and interconnected electricity grids, new and greener means of transportation, etc.
- Life sciences and medical progress, with fast-growing niche markets, such as medical tests, hearing aids and ophthalmic surgery.

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

the end of 2035.

What proportion of investments were made in transitional and enabling activities? $\ensuremath{\mathsf{N/A}}$

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

N/A

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

Socially sustainable investments accounted for 78.9% of all sustainable investments.

What investments were included in the "Other" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to the various categories. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the benchmark index?

How did the benchmark index differ from a relevant broad market index?

The reference universe is consistent with the fund's eurozone small and mid-cap strategy (with market capitalisation ranging from €200m to €10bn).

How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the environmental or social characteristics promoted?

The fund holds 40.2% of its total assets in sustainable investments, vs. 40.3% for its benchmark universe. The fund's carbon intensity was 58.7 at the end of the period, vs. 161.4 for its benchmark universe. The percentage of women on the boards of directors of investee companies was 44.3%, vs. 36.2% for the benchmark universe.

How has this financial product performed compared to the benchmark index?

The fund's ESG score exceeded that of its benchmark universe over the period.

How has this financial product performed relative to the broad benchmark index?

The reference universe is consistent with the fund's eurozone small and mid-cap strategy (with market capitalisation ranging from €200m to €10bn).

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

CM-AM FLEXIBLE EURO

Market performance

Market performance is measured over 12 months and is broken down into the following two periods:

1/ from 31 March 2022 to 31 December 2022

2/ from 31 December 2022 to 31 March 2023

First period: 2022 was a chaotic year that saw a sharp rise in inflation and interest rates

After the post-pandemic rebound of 2021, European equity indices continued their ascension in the first quarter of 2022. However, this was foiled by geopolitical turmoil and macroeconomic developments. In February, markets were chilled by Russia's invasion of Ukraine and the resulting economic sanctions against Russia. This war accelerated inflation—which had already raised its head in the United States during the recovery that followed the COVID-19 crisis—and triggered a surge in the price of natural gas in Europe.

In response, the main central banks on both sides of the Atlantic began to tighten their monetary policies a few months later. In mid-March, the Federal Reserve raised interest rates for the first time since 2008 (six further rate hikes were to follow). The European Central Bank followed suit in July, with its first rate hike since 2011. At the end of the first half of the year, eurozone equity markets had fallen significantly, as investors increasingly feared the risk of recession. This fear was exacerbated by China's strict restrictions in the name of its government's "zero-Covid" policy, which had been hampering economic activity for several months. After a summer buoyed by good half-year corporate earnings and upward revisions to full-year earnings forecasts, European equity indices began to decline under the weight of macroeconomic stress factors.

It wasn't until after the third quarter, when companies had confirmed their pricing power with earnings that exceeded expectations, that equity markets rallied. But it was above all the prospect of Beijing easing up on its fight against the spread of the COVID-19 virus and the subsequent confirmation that it would abandon its zero-Covid policy that boosted equity market. In the fourth quarter, European equity indices were thus able to recover some of their losses.

Against this gloomy backdrop in 2022, defence and energy stocks, which are under-represented in the SRI-labelled fund, clearly posted the largest gains, while technology companies and other grow stocks significantly underperformed due to the sharp increase in interest rates.

Second period: the first quarter of 2023 saw a recovery in risk assets.

European markets ended the 1st quarter of 2023 substantially higher, buoyed by generally reassuring economic data, the reopening of China's economy, and an earnings season that once again beat expectations. The fall in the prices of commodities, and energy in particular, augurs well for lower inflation and therefore a pause in the cycle of central bank rate hikes. However, the market's recovery was limited by the crisis in US regional banks resulting from the collapse of SVB and UBS's hasty takeover of Crédit Suisse in Europe. CM-AM Flexible Euro posted a substantial gain over the quarter. Among the best performers among our main holdings were technology, industrial and luxury goods companies exposed to global growth, such as STM (+48.6%), INFINEON (+33.7%), HERMES (+29.3%), LVMH (+24.2%), L'OREAL (23.3%), SAP (20.4%), SIEMENS (+18.5%) and SAFRAN (16.8%). The performance of financial companies was quite mixed, varying with the strength of balance sheets and between regions. Some positions were accordingly switched for others. For

example, BBVA and Unicredit posted strong gains of 16.6% and 31.2% respectively, while Bankinter returned -15.2%. We are maintaining our positions in this sector in anticipation of the forthcoming dividend payout.

Investment from 31 March 2022 to 31 March 2023

In this environment, the fund took advantage of attractive entry points to increase its positions in its long-standing holdings that are set to benefit from their exposure to the following long-term trends and sectors: 1) the sustainable economy and energy transition (SIEMENS and SCHNEIDER); 2) The health and life sciences sector (SANOFI); 3) innovation and new technologies (SAP, INFINEON, STM and DASSAULT SYSTEMES); 4) the luxury and the pursuit of well-being sectors (LVMH, HERMES, L'OREAL).

In the second half of 2022, the fund increased its exposure to financial stocks that are benefiting from the new paradigm in interest rates and in particular the increase in long-term interest rates, which include: BNP PARIBAS, AXA, ALLIANZ, UNICREDIT, BBVA, BANCO SANTANDER, AXA and MUNICH RE.

The fund's exposure to equity markets fluctuated between 35% and 55% over the period. At the end of March 2023, it stood at 53%.

From 31 March 2022 to 31 March 2023, the IC and RC unit classes returned 0.85% and 0.2% respectively.

In comparison, the benchmark index composed of 50% Compounded ESTER and 50% EUROSTOXX LARGE Net returned 5.70% the period.

ESG APPROACH

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy. Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded,

- A strict sectoral exclusion policy concerning controversial weapons in particular,

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The **investment strategy** ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance. NA

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

NA

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 31/03/2022 to 31/03/2023

| The largest investments | Sector | % of assets | Country |
|----------------------------|---------------------------|----------------|-------------|
| LVMH | Consumer discretionary | 7.03 | FRANCE |
| ASML HOLDING NV | Information technologies | 6.65 | NETHERLANDS |
| HERMES | Consumer discretionary | 4.26 | FRANCE |
| SCHNEIDER ELECTRIC | Industry | 4.20 | FRANCE |
| LOREAL | Consumer staples | 3.65 | FRANCE |
| SIEMENS AG | Industry | 3.54 | GERMANY |
| EURO | Liquidités | 3.32 | |
| SAP SE | Information technologies | 3.12 | GERMANY |
| DEUTSCHE TELEKOM AG | Communication services | 3.08 | GERMANY |
| BNP PARIBAS | Finance | 3.03 | FRANCE |

What was the proportion of sustainable investments?

How were assets allocated?

The **asset allocation** indicates the proportion of investments in specific assets.

Taxonomy-aligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating
 expenditure
 (OpEx), to measure
 the green activities
 of the investee
 companies

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

The financial product has committed to a minimum of 30% sustainable investments relative to total fund assets.

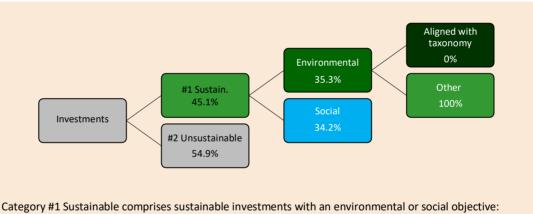

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category #2 Unsustainable comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

The investment team mainly looks for companies with solid positions in dynamic markets that are underpinned by major trends that accelerate their growth.

It has identified four major global structural trends:

- Technological innovation and the digitalisation of economic activities, with the development of e-commerce, autonomous cars, industry 4.0, cybersecurity, 5G technology, etc.
- The quest for wellness and improved quality of life, notably through exercise, healthier foods and more comfortable home environments
- The sustainable economy, which includes the energy transition, the circular economy and sustainable mobility, for example by developing renewable energies, smart and interconnected electricity grids, new and greener means of transportation, etc.
- Life sciences and medical progress, with fast-growing niche markets, such as medical tests, hearing aids and ophthalmic surgery.

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

taxonomy, the criteria for fossil

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive rules on

nuclear safety and waste

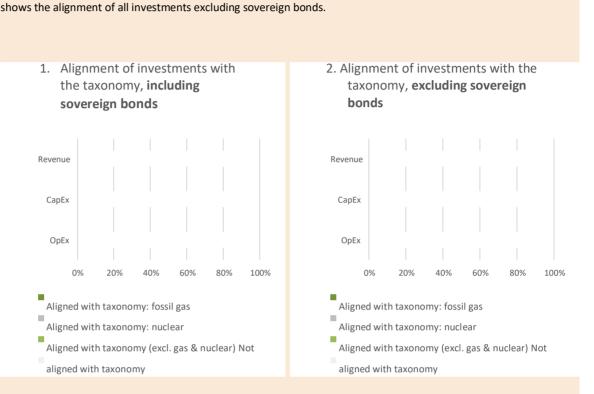

management.

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

Taxonomy-aligned activities are expressed as a percentage of:

- Revenue, to measure the share of revenue obtained from the green activities of investee companies;
- **Capital expenditure** (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds*, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NΑ

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

sustainable under the EU taxonomy.

This symbol

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investments was 75.8% of total sustainable investments (see the asset allocation table).

What investments were included in the "Other" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to the various categories. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second-and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the benchmark index?

How did the benchmark index differ from a relevant broad market index?

The reference universe is consistent with the fund's eurozone omni-cap strategy (with market capitalisation above €200m).

How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the environmental or social characteristics promoted?

The fund holds 45.1% of its total assets in sustainable investments, vs. 42.3% for its benchmark universe. The fund's carbon intensity was 88.5 at the end of the period, vs. 169.8 for its benchmark universe. The percentage of women on the boards of directors of investee companies was 46.4%, vs. 37.0% for the benchmark universe.

How has this financial product performed compared to the benchmark index?

The fund's ESG score exceeded that of its benchmark universe over the period.

How has this financial product performed relative to the broad benchmark index?

The reference universe is consistent with the fund's eurozone omni-cap strategy (with market capitalisation above €200m). The fund's ESG score exceeded that of its benchmark universe over the period.

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

CM-AM CONVERTIBLES EURO

2022 saw the end of the COVID-19 pandemic and its restrictions. However, it was also the year that war returned to Europe, and just some 3000 km from Paris. In response, financial markets went on a rollercoaster ride in which higher interest rates also played a large part.

Following Russia's "special mission" into Ukraine's independentist provinces, Europeans and Americans implemented severe sanctions against Russia, some of which proved to be costly to Europe. Indeed, Europe, and Germany in particular, are dependent on cheap energy to maintain the competitiveness of their industries, and in particular on Russian natural gas transported by the Nord Stream I and Nord Stream II pipelines, which due to sabotage and sanctions have essentially stopped supplying Europe. To compensate for this, Europe must use LNG tankers to import fracked gas from the United States, which poses the two-fold environmental problem of extraction and production. Furthermore, Europe no longer purchases Russian oil directly from Russia but through India and some North African countries, which means paying an intermediary and the cost of additional transport. In addition, since Europe's energy costs are dependent on the price of natural gas, the explosion of the latter has caused the price of electricity to soar. This is even the case in France, which should not be affected by this due to the large share of nuclear energy in its energy mix. Although the sanctions were intended to weaken Russia's economy, it is Europe that has seen sharply slower growth, higher inflation, and, above all, almost record trade deficits. Another factor that is scarcely apparent in economic statistics yet is of critical importance for Europe, and for France in particular, is the number of bankruptcies of small businesses and shops, which is exploding largely as a result of the sharp rise in energy costs. These various factors were the second spark that ignited inflation-the first being the disruptions and impediments to economic activity resulting from COVID-19 lockdowns-which governments can't really complain about, given their record VAT receipts, the devaluation of debt, and more or less stable and even positive nominal GDP growth, and which has also been beneficial to large companies with pricing power.

The impact of this inflationary shock has been amplified in financial markets by surging interest rates (causing the German 10-year yield to increase by almost 300 bp) and inappropriate responses by the European Central Bank. The ECB's first mistake was not to put an end to negative interest rates in the summer of 2021 when the first signs of inflation appeared in the wake of economic disruptions. Its second and biggest mistake was to maintain the position it announced in January 22 of not raising its key rates before terminating its QE programme. Following the outbreak of the Ukrainian war, the ECB should have revised its policy and followed the example of central banks, i.e. start raising its key rates while unwinding QE. Errare humanum est, perseverare diabolicum. These mistakes have done considerable damage to the euro, which fell to 0.95 against the US dollar on 30 September. Although the euro exchange rate is not an official ECB concern, any first-year economics student can understand that weakening the euro when energy imports are paid for in dollars effectively imports inflation. Incidentally, wasn't it for just the reverse reason that the ECB entered negative rate territory in September 2014?

Interest rates have been rising steadily since December 21, accelerating sharply from March to June 2022, and continuing upward in fits and starts from July 22 to March 23, at which time the German 10year yield almost reached its highest level in quite a long time (2.70 at the beginning of March 23, compared to 0.55 on 31 March 22). Increasing interest rates have had serious consequences for companies with high debt and/or with a relatively low credit rating. Accordingly, both IG and HY bonds have performed very poorly over the last three quarters of 2022. Equities behaved similarly until late September and early October 2022, when they fell fairly sharply. The difference between equities and other assets is that the reopening of China's economy and inflation (which benefits companies with pricing power) enabled them to enjoy a magnificent rebound that surprised the many investors who found themselves underinvested in risk-on assets. This renewed appetite for these assets became quite strong in the last quarter of 2022 and continued into 2023, until 10 March, when equity investors rediscovered banking risk with the collapse of SVB and two other regional banks in the United States, in less than five days as a result of bank runs. Equity markets then resumed their bullish trend, as investors were reassured by the intervention of the Federal Reserve and Janet Yellen. But the problem of the regional banks is far from resolved and it is quite likely that over the next few quarters or in 2024 other banks may also default as a result of higher interest rates and their consequences on the depreciation of their real estate assets and bonds, which could trigger a credit crunch and a possibly severe economic crisis, as seen in 2008 or 1929. For the time being, no eurozone bank is showing signs of excessive weakness. However, Switzerland did find it necessary to oversee UBS' takeover of Crédit Suisse.

During this very eventful financial year, we have had to manage our portfolio quite actively, both in terms of stock-picking and our allocation to equities, bonds and also foreign exchange. This is attributable to the major changes in our investment framework and policy resulting from new benchmark indices and the integration of ESG criteria. With the plunge in primary market issuance and the shrinking of its investment universe, the Exane Euro index was becoming a bit too narrow. In April 2022, we therefore replaced this benchmark index with the Exane Convertible Europe index. But when BNP took over Exane it stopped publishing these indices, which had been in use since 1996. So on 1 January 2023, we switched to the Refinitiv Convertible Europe index, which is quite similar to the Exane index.

Perhaps the year's most important event is the fund's recognition as an Article 8 fund, which means that it excludes 20% of its investable universe on the basis of ESG criteria. Although this change was not official until the summer of 2022, the fund has been managed in accordance with the Article 8 criteria since March 2022. So this new investment methodology has been observed for a full year. But the exclusion of some equities has sometimes been costly in terms of relative performance, particularly during bull markets, when companies like Delivery Hero—which was excluded because of its rating, but was a major component of the benchmark index with seven convertibles—did very well.

With bond prices falling in general (due to rising interest rates), speculative bonds falling in particular (due to widening credit spreads), and equities falling sharply, the fund's absolute performance was soon in the red. Although our strongly underweight exposures enabled us to outperform our benchmark by about 400 bp over the first half of the year, the sharp recovery of equity markets in the second half, and of value and low-quality stocks in particular, significantly reduced this outperformance.

Over the year, IC units (FR0013384617) returned -3.30%, RC units (FR0013384591) -3.84, RD units (FR0013481074) -3.79%, and S units (FR0013481082) -3.43%, while the three benchmark indices posted an aggregate return of -3.92% over the period.

ESG APPROACH

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy. Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded,

- A strict sectoral exclusion policy concerning controversial weapons in particular,

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

Product name: CM-AM Convertibles Euro Legal entity identifier: 969500JZ90BM2JZ20K17

A sustainable Sustainable investment objective investment is an investment in an economic activity that contributes to an Does this financial product have a sustainable investment objective? environmental or social objective, provided that × No the investment does no Yes significant harm to It has made sustainable It promoted environmental and social (E/S) either of these objectives and that the investments with an characteristics and, although it did not have company in which the environmental a sustainable investment objective, it had a investment is made objective:__% minimum proportion of 5% sustainable observes good governance practices. investments: with an environmental objective in economic in economic activities that are The EU taxonomy is activities that are considered considered environmentally a classification environmentally sustainable under the EU sustainable under the EU system established taxonomy under Regulation taxonomy (EU) 2020/852, with an environmental objective in in economic activities that are which lists economic activities that are not considered environmentally not considered X environmentally sustainable under the EU sustainable environmentally sustainable economic activities. taxonomy under the EU taxonomy This regulation does not include socially with a social objective sustainable X economic activities. Sustainable It has made sustainable It promoted E/S features but did investments with an environmental investments with a social not make sustainable objective are not objective: % investments necessarily aligned with the taxonomy.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

This financial product promotes environmental and social characteristics by seeking to improve its ESG score. This means that the portfolio's ESG score (the asset-weighted average) must therefore be superior to that of its benchmark investment universe.

The financial product's ESG score at the end of the financial year was 6.3/10, while that of its benchmark universe was 5.7/10. The fund has therefore achieved the environmental and social characteristics it promotes via the ESG score.

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are: The proportion of sustainable investments, which was 33.20%.

The financial product's ESG score, which was 6.3/10, an improvement of 10 points over the period. This is attributable to a more selective approach to issuers.

The ESG score once again exceeded that of the benchmark universe, mainly due to overexposure to engaged, "best-in-class" issuers.

... and in comparison with prior periods?

Issuer selection was improved.

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

For funds with a sustainable investment objective: This financial product has a minimum investment requirement in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

For funds without a sustainable investment objective: N/A

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective:

In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the **proportion of revenue aligned with** the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

For funds without a sustainable investment objective: N/A

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 01/04/2022 to 31/03/2023

| The largest investments | Sector | % of assets | Country |
|----------------------------|------------------|----------------|---------|
| SAFRAN | Industry | 7.28 | FRANCE |
| SCHNEIDER ELECTRIC | Industry | 6.39 | FRANCE |
| WORLDLINE | Technologies | 6.27 | FRANCE |
| STMICROELECTRONIC S | Technologies | 5.92 | FRANCE |
| AMADEUS IT | Technologies | 5.65 | ITALY |
| CARREFOUR | Consumer staples | 3.89 | FRANCE |
| CM-AM DOLLAR CASH | CIU | 3.68 | FRANCE |
| PRYSMIAN | Industry | 3.66 | ITALY |
| EDENRED | Technologies | 3.47 | FRANCE |
| NEXI CAPITAL | Technologies | 2.87 | ITALY |

What was the proportion of sustainable investments?

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

For funds with a sustainable investment objective: The financial product has committed to a minimum of 5% sustainable investments relative to total fund assets.

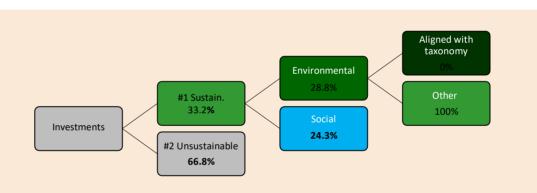

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

- Information technology
- Industry
- Consumer staples
- Consumer discretionary
- Utilities

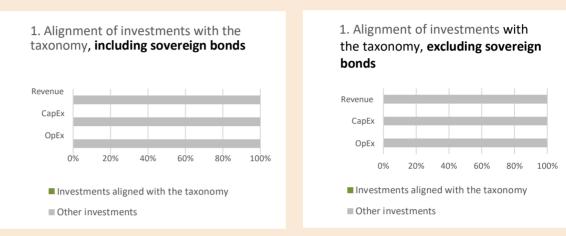

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds*, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? $\ensuremath{\mathsf{N/A}}$

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

N/A

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 24.3%.

Enabling activities directly enable other

activities to make a substantial contribution to achieving an environmental objective.

Transitional activities are activities for which lowcarbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

This symbol represents environmentally sustainable investments that **do not take into account the criteria** applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's **two mandatory sustainability indicators**.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How did this financial product perform as measured by the sustainability indicators used to determine the benchmark index's alignment with the sustainable investment objective?

If the financial product has no benchmark index: NA

If the financial product has a benchmark index: NA - with comparison of sustainability indicators (including the Sustainable Investment percentage if possible) between the portfolio and the benchmark index.

How has this financial product performed compared to the benchmark index? If the financial product has no benchmark index: NA
If the financial product has a benchmark index: NA

How has this financial product performed relative to the broad benchmark index?

If the financial product has no benchmark index: NA

If the financial product has a benchmark index: NA

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

CM-AM GLOBAL CLIMATE CHANGE

2022-2023 financial year: Although fundamental factors were positive for the theme, equity markets had a mixed year.

During the fiscal year from March 2022 to March 2023, financial markets were characterised by high volatility and abrupt changes in investment styles.

The year may be broken down into two distinct periods.

2022: Equity markets were highly uncertain, as a result of the energy crisis, inflation, the risk of recession and restrictive monetary policy.

The year was a poor one for equity markets, with the MSCI All Country index losing 14.9% (in USD) from the end of March to December 2022 (and 19.8% in USD over the full calendar year). Share prices continued to fall until the beginning of the summer in the wake of the energy crisis, persistent inflation and rising interest rates.

After some respite over the summer, fuelled by hopes of an end to monetary tightening, equity markets plunged in autumn after Jerome Powell's pessimistic speech in Jackson Hole. This was followed by a technical rebound in late October and another correction in the winter on fears of recession.

In this environment, only the energy and defence sectors showed some resilience, posting returns of 8.9% and -0.5% respectively from the end of March to December 2022.

The year was marked by the announcement of ambitious investment plans by various governments to accelerate decarbonisation and strengthen their energy independence. Europe led the way with its "Repower EU" plan, backed by €251bn of public funding. This plan has raised the initial targets of the "Fit for 55" plan to accelerate the European Union's decoupling from Russian gas.

But it was on the other side of the Atlantic that objectives were most drastically increased, when the Biden administration announced a \$370bn investment plan to accelerate the country's energy transition and achieve its target of reducing greenhouse gases by 55% by 2030.

Early 2023: Equity markets recovered on the hope that the worst was over.

Equity markets rebounded early in the year, with the World index gaining 6.8%, rallying strongly in January on the back of China's reopening, lower energy prices and better-than-expected macroeconomic indicators in Europe and the US.

Over the next two months, markets showed some resilience despite the banking sector's problems, persistent inflationary pressures and the risk of slower growth and possibly recession. Investors generally focused on the prospects of no more interest rate hikes and a soft landing for the economy without recession. Over the first quarter growth companies and quality companies outperformed the market, returning 9.5% and 6.7% respectively in USD.

The news most relevant for the investment theme was the announcement of the "Net Zero Industry Act", the European version of the US Inflation Reduction Act. The European Commission unveiled its plan for facilitating permits and national subsidies for renewable energy projects.

How the fund did

Since its inception on 21 June 2021, the CM-AM Global Climate Change SICAV fund has been financing global companies that actively contribute to the climate transition. It focuses on the following four themes: 1) renewable energies & energy efficiency; 2) sustainable mobility; 3) ecosystem preservation; and 4) change agents.

CM-AM Global Climate Change is an impact fund, in compliance with SFDR Article 9, which means that 100% of its investments are sustainable.

Over the period under review, from 7 September 2022 to 31 March 2023, the I, S and R unit classes respectively returned -5.68%, -5.80% and -6.21%. For comparison, the MSCI AC World index denominated in euros with dividends reinvested returned -1.66%.

The fund underperformed its benchmark index for the following reasons:

- Exposure to interest-rate-sensitive sectors

The fund's 'growth bias', which is inherent to its theme, suffered from the rotation to value stocks and to certain sectors such as energy, to which the fund has little or no exposure. For example, its Greenfin label presents it from investing in fossil fuels, and the MSCI ACWI Energy index gained 6.3% (in euros) over the period under review.

The fund was also disadvantaged by its exposure to utilities (16% of AUM), which were negatively impacted by rising interest rates and their bond-like behaviour. The sector lost 3.66% (in euros) over the period under review.

- Exposure to Europe (33%)

CM AM Global Climate Change suffered from its exposure to Europe, which was the epicentre of investor fears about the economy and the energy crisis in 2022. This resulted in a negative allocation effect despite the selection of high-quality companies that are leaders in the buoyant sectors of electrification, insulation and renewable energy. The rebound that began in 2023 has yet to compensate for this decline.

- Investor disaffection with small-caps

CM AM Global Climate Change also maintains an average 30% exposure to companies with less than US\$10bn in market capitalisation, which were particularly hard hit, causing the MSCI World Small Cap index to fall 7.14% (in euros with dividends reinvested) over the period, while the MSCI All Country World lost only 5.21% (in euros with dividends reinvested). All small-caps were down regardless of their fundamentals. The fund is monitoring its exposure to small-caps carefully, but is maintaining it to support innovative companies committed to the energy transition.

In an environment that is dominated by macroeconomic factors, CM AM Global Climate Change has decided to stick to its roadmap of investing in quality companies that contribute to the energy transition. The fund considers these bearis equity markets, which weigh on all stocks indiscriminately, to be buying opportunities. Selectivity is key.

The top contributors to performance over the period were:

- Yadea, a \$7.6bn company that is China's leading maker of electric scooters. Yadea is enjoying robust sales growth that is driven by a competitive product offering, international expansion and a regulatory environment that encourages the adoption of electric scooters.

- LG Chem, South Korea's leading chemicals company with a market capitalisation of \$43bn. LG Chem's share price was boosted by the successful IPO of its electric battery subsidiary, LG Energie, and improved prospects for its Petrochemicals and Cathodes divisions.

- Enphase Energy, a \$26bn US company that is a leading maker of micro-inverters and has profited from the strong growth of the US solar market.

The main detractors were:

- Plug Power, a \$5.5bn US company and a leader in green which and seeks to establish itself along most of the value chain. The company has had difficulty executing its strategy due to logistics problems and setbacks with service contracts that were not indexed to energy prices.

- Ball Corp, a \$15bn US company that makes metal packaging (cans, aerosol bottles). Ball Corp. has been impacted by raw material inflation and slowing demand in its end markets.

- OVH, a \$2.3bn French server hosting company. Although the company lived up to expectations, its share price underperformed due to investor fears about the growth of cloud computing, the lack of profits, and the lack of investor interest in small-cap companies.

Main transactions

The fund held 49 stocks at the end of March 2023. This is consistent with its stock-picking approach and targeted range of 40 to 60 holdings. The fund has a solid cash reserve that enables it to initiate new positions and add to those we believe offer the best potential.

The main positions we sold were:

- Infineon Technologies, a leading German maker of power semiconductors. This position was liquidated in 2022 when the energy crisis clouded the outlook for Germany's economy.

- Ball Corp, which was sold due to its inability to pass on higher materials costs to its customers.

- Hannon Armstrong, a US financial company that finances projects to fight climate change. This company was sold due to the risk that rising interest rates would diminish its returns.

CM-AM Global Climate Change also initiated the following new positions:

- Kurita Waters, a Japanese wastewater treatment company that is well positioned to benefit from structural trends in the water sector, boasts consistent earnings growth, and has successfully migrated its business to a service model.

- China Yangtze, a Chinese utility that operates the Three Georges hydroelectric dam. Hydroelectricity will play a key role decarbonising in China's economy.

- Vinci, a French company and a world leader in construction, transportation infrastructure concessions, and energy. Vinci has a resilient business with little exposure to economic cycles. It is also a key player in reducing the carbon footprint of transportation and other infrastructure.

Outlook

Despite a turbulent year in equity markets, the fundamental factors that underpin the investment theme are stronger than ever. This is largely attributable to the plans of national governments to invest large sums to stimulate the development of new industries (such as hydrogen) and improve the cost-effectiveness of renewable energies. Reassurance as to the future availability of subsidies and tax credits gives stability for these industries, which require long-term development.

In addition, the war in Ukraine has raised awareness of the key roles that renewable energies and energy efficiency play in gaining energy independence. Higher prices for fossil fuels have automatically made renewable energies more competitive. For example, solar power is now the most competitive source of electricity, with an overall cost of \$42/MWh in December 2022. In comparison, a gas-fired power station had a production cost of \$75/MWh.

CM AM Global Climate Change is well positioned to benefit from these trends. The fund is 45.40% invested in renewable energies and energy efficiency, 16.40% in sustainable mobility, 20.80% in the preservation of ecosystems and 11.70% in change agents. The fund is also well exposed to both the IRA and European investment plans, with 31% invested in the United States and 33% in Europe.

The weighted average revenue growth of the fund's portfolio companies for 2023 is estimated at 11.0% and earnings per share growth at 13.0%. In comparison, the weighted average growth of the MSCI All Country World index is expected to be 1.40% with 0.04% earnings per share growth.

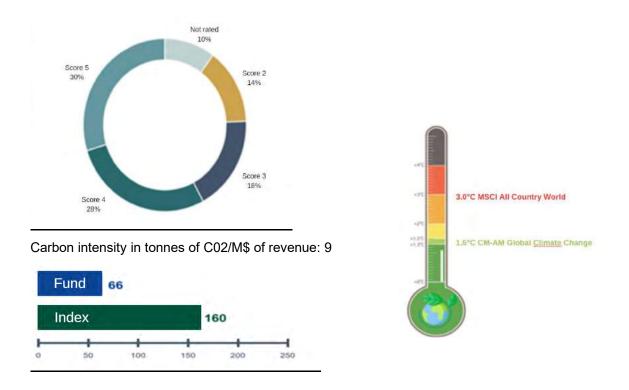

ESG characteristics

CM-AM Global Climate Change invests in global companies listed on regulated markets and which actively contribute, either directly or indirectly, to the prevention of global warming, to the energy and climate transition, and to sustainable development.

The fund takes carbon scores into account when selecting securities. It also calculates various ex-post ESG indicators, and most notably the portfolio's temperature and alignment with the Paris Agreement.

Breakdown by carbon score (% of total portfolio)

Fund temperature: 10

CM-AM Global Climate Change is an impact fund, in compliance with SFDR Article 9, which means that 100% of its investments are sustainable.

This fund's investment strategy employs a **methodology** developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management

makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy. Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded,

- A strict sectoral exclusion policy concerning controversial weapons in particular,

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Sector policies:

One of Crédit Mutuel Asset Management's strategic objectives is to develop sectoral policies that are aligned with Crédit Mutuel Alliance Fédérale's Social and Mutualist Responsibility Policy ⁽¹⁾. More information on CM-AM's sector policies are available on Crédit Mutuel Asset Management website.

Observation of these policies is monitored and enforced in three ways:

- with a pre-trade procedure that prevents investment in securities that are prohibited by the sector policies ⁽²⁾;

- with a post-trade procedure that identifies any securities that should be excluded pursuant to the sectoral policies and which are present in the portfolio (other than index funds and formula funds created before November 2019)

- by the CSR Committee, which meets quarterly with General Management and is responsible for supervising and monitoring the observance of sector policies. Among other things, this committee takes note of the Responsible and Sustainable Finance department's qualitative analyses of the issuers subject to the sector policies.

Ex-post Addendum to the SFDR Annual Report

Product name: CM-AM GLOBAL CLIMATE CHANGE Legal entity identifier: 969500ID8JKXPYIWJB38

Sustainable investment objective investment is an investment in an economic activity that contributes to an Does this financial product have a sustainable investment objective? environmental or social objective, provided that X Yes the investment does no No significant harm to It promoted environmental and social (E/S) x It has made sustainable either of these objectives and that the investments with an characteristics and, although it did not have company in which the environmental objective: a sustainable investment objective, it had a investment is made 100% minimum proportion of observes good governance practices. % sustainable investments in economic activities that are with an environmental objective in economic X The EU taxonomy is a activities that are considered environmentally considered environmentally classification system sustainable under the EU taxonomy sustainable under the EU established under Regulation (EU) taxonomy 2020/852, which lists in economic activities that are with an environmental objective in economic activities that are not considered economic activities that are not considered environmentally environmentally sustainable under the EU environmentally sustainable sustainable. This taxonomy under the EU taxonomy regulation does not include socially sustainable economic with a social objective activities. Sustainable investments with an It has made sustainable environmental objective are not investments with a social It promoted E/S features but did necessarily aligned objective: 90% not make sustainable with the taxonomy. investments

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

A sustainable

To what extent has the objective of this financial product been achieved?

This financial product adopts a selective approach that eliminates from its investable universe 20% of the most carbon-intensive issuers as determined using an internal carbon scoring model. Similarly, the companies selected for the portfolio are active in at least one of the eight 'eco-activity' areas recognised by the Greenfin label and which contribute to the decarbonisation of economies, the energy transition and sustainable development. These eco-activity areas are: energy, construction, circular economy, industry, transportation, information and communication technologies, agriculture (including forestry) and climate change adaptation.

An ex-post analysis of the portfolio's temperature shows that is aligned with a global warming scenario of 1.5° C by 2050. This compares with a temperature increase of 3° C for its benchmark index.

1

What were the results of sustainability indicators?

This financial product's sustainability indicators are the carbon score, carbon intensity (performance indicator 1), portfolio breakdown by eco-activity and the proportion of sustainable investment.

- The financial product's carbon score is 3.24/5.
- The carbon intensity (scope 1+2) is 66 tCO2/€m of Rev. at the end of the period
- The portfolio's breakdown by eco-activity is 49.2% for type I issuers (50-100% eco-activity), 34.7% for type II issuers (10-50% eco-activity) and 16.1% for type III issuers (0-10% eco-activity).
- The proportion of sustainable investments (excluding cash and money market funds) is 100%.

... and in comparison with prior periods?

NA

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective? How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective: In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs). The following were used to assess the potential for significant harm:

Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.

Normative exclusion rules involving controversial weapons and respect for human rights

The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)

Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of non-compliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

Principal adverse

impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The **investment strategy** ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

What is this financial product's investment strategy?

What rules must be observed in selecting investments that will achieve the sustainable investment objective?

The fund was awarded the French Ministry of the Environment's Greenfin label in recognition of its compliance with its sustainability theme. Accordingly, the fund may only invest in companies that work to promote sustainable development and prevent global warming. The Greenfin label has defined eight so-called eco-activities in which the fund must invest. It requires the fund to invest at least 20% of its assets in type I issuers (50-100% eco-activities) and no more than 25% in type III issuers (0-10% eco-activities). The Greenfin label prohibits investment in companies that obtain more than 5% of their revenue from the production and/or distribution of fossil fuels or nuclear energy.

The fund also aims to invest in the least carbon-intensive companies in their respective economic sector and excludes class 1 issuers, as determined by CM AM's proprietary methodology. The fund is also committed to maintaining lower carbon intensity than its benchmark index. The fund tracks the proportion of investee companies that are SBTi signatories.

What were the financial product's main investments?

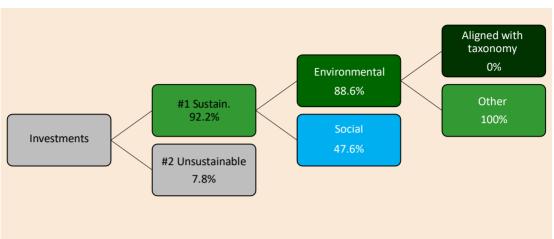

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from **31/03/2022 to 31/03/2023**

| The largest investments | Sector | % assets | Country |
|-------------------------|--------------------|----------|---------|
| ALFEN N.V. | INDUSTRY | 1.69% | NE |
| ALSTOM REGROUPT | INDUSTRY | 1.89% | FR |
| AMERICAN WAT.WORKS | UTILITIES | 2.48% | US |
| APTIV | AUTOMOBILE | 1.50% | IR |
| ARRAY TECHNOLOGIES | ENERGY | 0.30% | US |
| AVERY DENNISON | INDUSTRY | 1.80% | US |
| BENTLEY SYSTEMS B | MEDIA&TECHNO | 2.29% | US |
| BUREAU VERITAS | FINANCIAL SERVICES | 1.77% | FR |
| CADENCE DESIGN SYS | MEDIA&TECHNO | 1.83% | US |
| CARRIER GLOBAL | CONSTRUCTION | 1.26% | US |

What was the proportion of sustainable investments?

How were assets allocated?

The **asset allocation** indicates the proportion of investments in specific assets.

Category #1 Sustainable comprises sustainable investments with an environmental or social objective: Category #2 Unsustainable comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

| 39.9% |
|-------|
| 17.7% |
| 17.0% |
| 12.8% |
| 9.7% |
| 3.0% |
| |

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy ¹?

| Yes | |
|---------------|-------------------|
| In fossil gas | In nuclear energy |
| X No | |

¹ Fossil gas and/or nuclear activities are only considered to be compliant with the EU taxonomy if they contribute to limiting climate change ("climate change mitigation") and do not cause significant harm to any objective of the EU taxonomy (see the explanatory note in the left margin). The various criteria that determine the compliance of reconomic activities in the fossil gas and nuclear energy sectors with the EU taxonomy are set out in the Commission Delegated Regulation (EU) 2022/1214.

To comply with the EU taxonomy, the criteria for fossil gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by the end of 2035. For nuclear energy, the criteria include comprehensive rules on nuclear safety and waste management.

Enabling activities

directly enable other activities to make a substantial contribution to achieving an environmental objective.

Transitional activities are activities for which low-

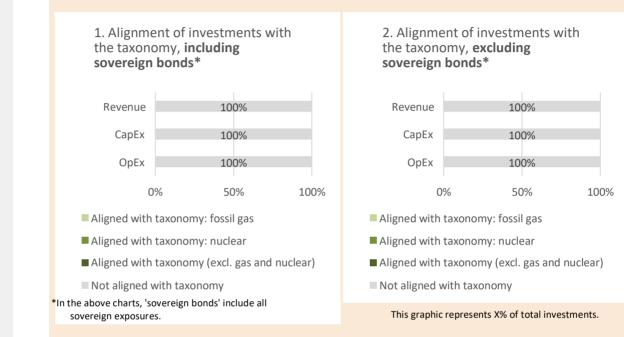

carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

To what extent were sustainable investments with an environmental objective aligned with the EU taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF). None of our investments are therefore considered to be aligned with the EU taxonomy.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

What proportion of investments were made in transitional and enabling activities?

NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What was the minimum proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

NA

What was the minimum proportion of sustainable investments with a social objective?

The proportion of socially sustainable investment was 47.6%.

Taxonomy-aligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "#2 Unsustainable" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

The fund is 100% invested in sustainable assets. This does not include liquid assets (i.e. cash and money market funds which constituted 5.7% of the fund on 31/03/2023).

What measures were taken to achieve the sustainable investment objective during the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure carbon scoring of at least 90% of assets and that 20% of the lowestrated companies/issuers within the investment universe are excluded. For Greenfin-labelled funds, these controls also monitor the portfolio's breakdown by eco-activity.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the precontractual documents is complied with at all times.

How has this financial product performed compared to the benchmark index?

How did the benchmark index differ from a relevant broad market index?

The fund's benchmark index is the MSCI All Country World index in euros with net dividends reinvested, which is a broad market index that is representative of all economic sectors and regions.

How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the sustainable investment objective?

- The financial product's carbon score is 3.24/5, vs. 3.09 for its index
- The carbon intensity (scope 1+2) is 66.0 tCO2/€m of Rev. at the end of the period, vs. 160.8 tCO2/€m of Rev. for its benchmark index
- The percentage of eco-activity is only broken down for the portfolio (see previous response).
- The proportion of sustainable investment is 100%, compared with 54.0% for the fund's index.
- How has this financial product performed relative to the benchmark index?

The CM-AM Global Climate Change fund returned -7.4% (C unit class) over the period, vs. -5.2% for its benchmark index, the MSCI All Country World index in euros with **dividends reinvested**.

How has this financial product performed relative to the broad benchmark index?

NA

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

CM-AM GLOBAL EMERGING MARKETS

A tough year for the emerging countries

Queen Elizabeth 2 described 1992 as an "annus horribilis". This may also be said of the 2022/2023 financial year with respect to equity markets, and to emerging markets in particular.

The main reasons that emerging markets underperformed over the period from March 2022 to October 2022 are:

- The COVID-19 pandemic in China weighed heavily on growth, with the March-April and October-November lockdowns bringing the economy to veritable standstills.

- The ongoing collapse of the Chinese property market, which also slowed growth.

- The maintenance of regulatory pressure by Chinese authorities on the Internet and other sectors.

- The risk that Chinese companies may be delisted from US stock markets if they refuse to be audited.

- Sino-American relations remained tense.

- The correction in the semi-conductor sector, which depressed the Korean and Taiwanese markets.

- Rising central bank policy rates and the US dollar's appreciation, which were headwinds for emerging markets.

- A part from Mexico, many Latin American countries were affected by political changes.

From November 2022 onwards, the following factors enabled emerging markets to outperform global equities:

- China's abandonment of its zero-Covid policy, which brightened its growth prospects considerably.

- The completion of the auditing of Chinese companies listed in the United States to the satisfaction of the US authorities.

- China's measures in support of its property market.

- Inflation was stabilised in most emerging countries, and even declined in some, as in Brazil.

Emerging markets ended the year down -13.3% (in USD) and underperformed global equities (-8.6% for the MSCI World index). Investor disaffection with long-duration securities also impacted emerging markets.

The emerging countries still offer good long-term growth potential. Their overall GDP growth in 2023 is expected to be 4.0% (source: HSBC, March 2023). This is significantly higher than the 2.0% global growth and the 0.5% growth forecast for the developed countries. The 24 emerging countries—which span 4 continents and include China, India, Russia, South Africa and Brazil—continue to offer many investment opportunities.

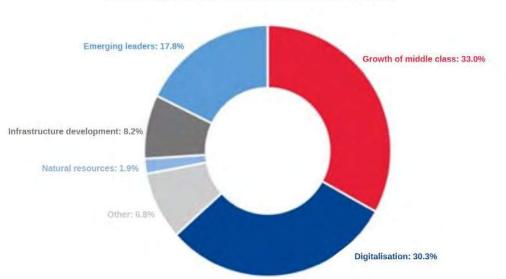

How the fund did

Regarding Russia, it should be noted that the fund began reducing its exposure to Russian companies at the end of 2021, by taking profits on various holdings. Exposure to Russia was further reduced in response to geopolitical risk, until 24 February when all remaining positions in Russia were sold before prices collapsed and securities ceased to be traded. The fund's has had no exposure whatsoever to Russia as of 25 February 2022.

In fiscal 2022, the fund's RC units lost 10.92%, IC units fell 22.5%, ER units 23.0%, and S units 22.5%. The fund underperformed its benchmark index, the MSCI Emerging Markets, which was down 9.6% over the period (from 1 July 2021 to 31 March 2022), in euros and with net dividends reinvested. Unit class and index returns are expressed in euros.

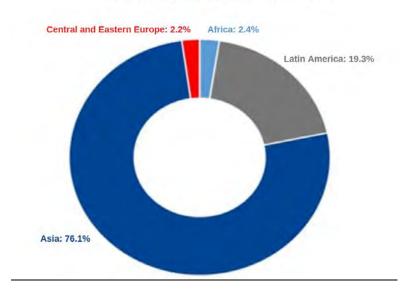

The fund's underperformance is mainly attributable to its exposure to China, Hong Kong and Mexico, and to the industrials, IT, property and consumer goods sectors. Accordingly, the main detractors from performance were Longfor Group Holdings (-1.1 pts), Globant (-0.9 pts, Techtronic Industries (-0.8 pts, Atacadao (-0.8 pt) and GDS Holdings (-0.8 pt).

Since the fund is strongly growth oriented, it aims to profit from the dynamism of emerging markets. Accordingly, the weighted average revenue growth of the fund's portfolio companies in fiscal 2023 is estimated at 15% and earnings per share growth at +16% (source: Factset consensus at 31/03/2023). CM AM Global Emerging Markets' five investment themes are based on structural growth factors that are found in all of the emerging countries. The primary theme is the growth of the middle class in these countries, which will expand by over one billion people from 2018 to 2027, including the impact of the COVID-19 pandemic. This is a formidable growth driver. These new consumers will need consumer products, education and health services. This first theme will also have an impact on three others: the development of infrastructure, the digitalisation of the economy and the advent of new market leaders. The fifth investment theme is natural resources (e.g. oil, metals, water, etc.), which are prevalent in these emerging countries (see the charts below of the fund's portfolio investments by investment theme and geographic region, at 31 March 2023).

Funds by investment theme at 31 March 2023

Funds by geographic region at 31 March 2023

At the end of the financial year, at 31 March 2022, the fund had 45 securities in its portfolio (not counting three funds), compared with 47 (not counting five funds). The fund's decision to limit its investments to 40 to 60 securities is consistent with its selective stock-picking approach and facilitates their monitoring.

The main positions we sold were:

- GDS Holdings, which operates data centre property infrastructure in China, as it failed to live up to expectations and was adversely affected by the tightening of Internet regulations in China.
- Brazilian oil company Petrobras was sold after its CEO was replaced by the country's new President, and in view of the risk of price controls at the pump.
- We sold Xinjiang Goldwind, China's leading maker of wind turbines, in response to a dimmer outlook for its market.
- Atacadao, Brazil's leading food retailer, which is facing increased competition and is taking longer to integrate Grupo Big than expected.

Cm AM Global Emerging Markets also initiated the following new positions:

- China Tourism Duty Free Group, which is the country's leading seller of duty-free products. This position was initiated to gain exposure to China's reopening and to the growth of consumer spending.
- Budweiser APAC, which is number one in premium beers in China and Korea. China's reopening and the structural trend in favour of premium beers are two strong growth drivers.
- BYD, a pioneer in the development of electric and hybrid cars in China, with a broad range of popular vehicles. Its distribution strategy encompasses not only the country's metropolises but also its mid-sized cities.
- HDFC Bank, one of India's leading private banks. Following its merger with Housing Development Finance Corporation, HDFC Bank's share price had returned to a more attractive level. In addition, the synergies arising from the merger should enable HDFC Bank to enlarge its coverage of the mortgage market and attract new deposits.
- Yum China, which operates such US brands as KFC, Pizza Hut and Taco Bell, as well as its own Chinese cuisine franchises. Yum China is profiting from the reopening of its Chinese operations and the continued expansion of its restaurant network.

The outlook for the new financial year has improved. China is making fundamental changes by reopening its economy and adopting pro-business measures. The fund should benefit from this, as it significantly increases its exposure. At the end of October, China accounted for 28% of the portfolio. By selling some positions and using its 8.5% cash reserve, the investment team substantially beefed up its exposure to China to 40% at 31 March 2023. We initiated or added to our positions in consumer discretionary (JD.com, Li Ning, BYD and China Tourism Group), consumer staples (Budweiser APAC and China Resources Beer) and communications services (Tencent and Kuaishou). We are investing in companies that are not only benefiting from the reopening, but which also have a catalyst for structural growth.

The other Asian countries are expected to also benefit from this recovery, as also is Brazil. Attractive valuations in emerging countries are another catalyst. The fund is invested in quality growth companies that offer good upside potential.

ESG APPROACH

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy. Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded

- A strict sectoral exclusion policy concerning controversial weapons in particular

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

Sustainability indicators measure to what extent the financial product has achieved its sustainability objectives.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

This financial product limits its holdings in issuers having the lowest internal ESG scores (class 1) to 10%. In addition, the fund's carbon score, which is based on an internal rating, must be lower than that of its benchmark index. The fund's portfolio includes no company involved in a major ESG controversy as determined by the management company.

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are the ESG score, the percentage of women on boards of directors, (performance indicator #1), the human rights policy (performance indicator #2) and the proportion of sustainable investments.

- The financial product's ESG score is 4.7/10
- The carbon intensity (scope 1+2) is 96.75 tCO₂/€m of Rev. at the end of the period
- The proportion of sustainable investments is 44.1%.

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

This financial product has a minimum investment requirement of 5% in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

For funds with a sustainable investment objective: In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 31/03/2022 to 31/03/2023

| The largest investments | Sector | % of assets | Country |

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital
 expenditure
 (CapEx), to
 measure the
 green
 investments made
 by the investee
 companies, for
 example for the
 green transition;
 operating
 expenditure
- (OpEx) to measure the green activities of the investee companies

What was the proportion of sustainable investments?

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments. For funds with a sustainable investment objective:

The financial product has committed to a minimum of 5% sustainable investments relative to total fund assets.

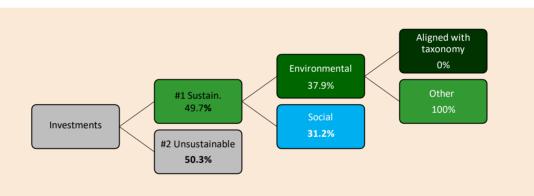

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category #1 Sustainable comprises sustainable investments with an environmental or social objective: Category #2 Unsustainable comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

| Consumer discretionary | 27.2% |
|------------------------|-------|
| Technology | 22.8% |
| Consumer staples | 12.5% |
| Industrial | 11.5% |
| Financial | 11.2% |
| Communication | 8.9% |
| Industry | 3.8% |
| Energy | 1.5% |
| Utilities | 0.6% |
| | |

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

the end of 2035.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy (see the asset allocation table).

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 31.2%.

Investments aligned with the taxonomy Other investments

- Revenue, to measure the share of revenue obtained from the green activities of investee companies;
- **Capital expenditure** (CapEx), to measure the green investments made by the investee companies, for example for the green transition:
- Operating expenditure (OpEx) to measure the green activities of the investee companies

This symbol represents

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there

What investments were included in the "Others" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to either category. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the sustainable benchmark index?

How did the benchmark index differ from a relevant broad market index?

The fund's benchmark index is the MSCI Emerging Markets index in euros with net dividends reinvested, which is a broad market index that is representative of all economic sectors and regions.

Benchmark indices are used to measure whether the financial product achieves its sustainable investment objective.

How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the environmental or social characteristics promoted?

- The financial product's ESG score is 4.7/10, vs. 4.6/10 for its index
- The carbon intensity (scope 1+2) is 96.75 tCO2/€m of Rev. at the end of the period, vs. 316.96 tCO2/€m of Rev. for its benchmark index.
- There were no red human rights controversies at the end of the period, vs. 1 for the benchmark index
- The proportion of sustainable investments at the end of the period is 44.1%, vs. 32.9% for the index.

How has this financial product performed relative to the benchmark index?

Over the period the CM-AM Global Emerging Market fund returned -10.9% (C unit class) vs. -8.6% for its benchmark index.

How has this financial product performed relative to the broad benchmark index?

NA

CM-AM EUROPE GROWTH

Over the financial year that ended on 31 March 2023, financial markets posted significant gains, despite a succession of unfavourable events. Just as the COVID-19 crisis had come to an end, the conflict between Russia and Ukraine further destabilised markets. This war, together with China's health policy, severely disrupted global supply chains and contributed to a record rise in inflation. The year also marked the end of an exceptional period of zero interest rates, as central banks were forced to end their ultra-accommodative monetary policies against a backdrop of rising inflation. Although the ECB began its cycle of rate hikes after the Federal Reserve, it made record increases in September and October.

This caused much suffering in financial markets over the first half of the year. The key concerns for investors were spiralling inflation and its corollary, the accelerated tightening of monetary policy.

In this environment, the fund incurred losses over the period from its exposure to highly indebted companies, such as Cellnex (-18.06% over the year) and Neoen (-18.59%). On the other hand, our SRI approach prevented us from investing in such companies as Prosus, which saw its share price rebound 48.45% due to its exposure to China via its stake in Tencent. We also adopted underweight exposure to semi-conductor makers, fearing that the end of production bottlenecks would depress chip prices, but this had no impact on their share prices.

Lastly, sector rotation crushed the valuation multiples and depressed the share prices of healthcare and other defensive growth stocks.

The strongly positive contributors to the fund, which compensated for the detractors, were luxury goods and other consumer companies, which are exposed to China's recovery and benefited from solid demand in the US and Europe at the start of the year. Hermès, for example, gained 45.3% over the year, while LVMH saw its share price rise 32.44%.

One of the major beneficiaries of inflation was Edenred, which gained 23.85% over the year after convincing investors of the solidity of its double-digit growth over the medium term.

The recovery of financial markets was often driven by sectors from which the fund was absent, such as banking and the cyclical hotel and leisure sectors.

The fund's ER units returned -1.81%, IC units -1.06%, R units -2.54%, RC units -1.80% and S units - 1.41%.

• ESG APPROACH

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy.

Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded,

- a strict sectoral exclusion policy concerning controversial weapons in particular.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

Product name: CM-AM EUROPE GROWTH Legal entity identifier: 969500HGIT8IEBFSS259

A sustainable

investment is an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does no significant harm to either of these objectives and that the company in which the investment is made observes good governance practices.

The EU taxonomy is a classification system established under Regulation (EU) 2020/852, which lists economic activities that are environmentally sustainable. This regulation does not apply to socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

| Does this financial product have a sustainable investment objective? | | | | | |

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators are used to measure to what extent the financial product has achieved its sustainability objectives. This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. It also promotes environmental and social characteristics by aiming to outperform two of the key sustainability performance indicators of its ESG universe: carbon intensity and the number of human rights related controversies.

Sustainable investment objective

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are the ESG score, carbon intensity (performance indicator 1), the number of human rights controversies (performance indicator 2) and the proportion of sustainable investments.

- The financial product's ESG score is 6.1/10, with no previous comparison.
- Carbon intensity was $93.9tCO^2/M$ € CA at the end of the period, with no previous comparison.
- There were no human rights controversies at the end of the period, with no previous comparison.
- The proportion of sustainable investments at the end of the period was 57.4%, with no previous comparison

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

This financial product has a minimum investment requirement of 30% in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How are adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding
 principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 31/03/2022 to 31/03/2023

| The largest investments | Sector | % of assets | Country |
|-------------------------------------------|-----------------------------|----------------|-------------|
| SAP SE | Information technologies | 5.52 | GERMANY |
| L OREAL SA | Consumer staples | 4.40 | FRANCE |
| LVMH MOET HENNESSY LOUIS VUITTON SE | Consumer discretionary | 4.10 | FRANCE |

| SYMRISE AG | Materials | 2.99 | GERMANY |

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

What was the proportion of sustainable investments?

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

The financial product has committed to a minimum of 30% sustainable investments relative to total fund assets.

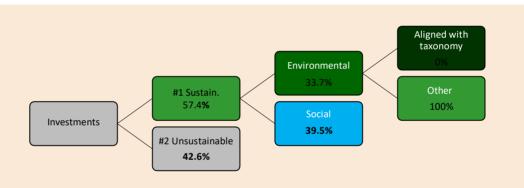

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

| Healthcare | 25.88 | |
|--------------------------|-------|--|
| Information technologies | 23.73 | |
| Industry | 13.38 | |
| Consumer discretionary | 10.83 | |
| Materials | 10.73 | |
| Consumer staples | 7.97 | |
| Utilities | 1.21 | |
| Communication services | 1.19 | |
| Finance | 1.06 | |

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

taxonomy, the criteria for fossil

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive rules on

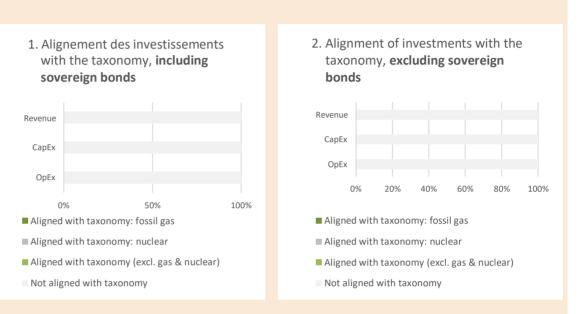

nuclear safety and waste

management.

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

X No

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy.

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 39.5%.

Taxonomy-aligned activities are expressed as a percentage of:

- Revenue, to measure the share of revenue obtained from the green activities of investee companies;
- Capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "Other" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to the various categories. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

CM-AM DOLLAR CASH

The end of the previous year saw the Fed's first rate hike of 25 bp. This marked the beginning of a series of increases that punctuated the year. Attitudes about Inflation were completely turned around, as it is no longer seen as just a temporary factor.

In early May, the Fed raised its key rate by 50 bp and kept raising it at each of its meetings throughout the year. It even made four particularly aggressive rate hikes of 75 bp. At its most recent meetings in early 2023, it tempered its monetary tightening to two 25 bp rises. Over the course of its eight meetings it therefore increased its target range from 0.25/0.50% in March 2022 to 4.75/5.00% in March 2023. Never before have interest rates been increased so much and so fast. Ultimately, it is the pace of this monetary tightening that is the chief concern.

The energy and food sectors have been particularly exposed to the war in Ukraine. The strict sanctions against the Russian Federation imposed by the Western countries before the United Nations have been widely condemned, with many countries refusing to lend their support. Only the West is showing unconditional support for Ukraine, by delivering arms and equipment, granting loans and imposing multiple and increasingly severe sanctions on Russia. This war has also been a key concern over the year. Another development on the global front was China's decision to finally abandon its "zero-Covid" policy. The reopening of the country's economy is one of the factors driving the inflation in commodities and energy. In addition, China's support of Russia and firm stance on Taiwan are heightening tensions with the US.

Toward the end of the year, the results of the US mid-term elections proved to be unfavourable to the Democrats. Although they retained control over the Senate, they lost the House of Representatives by a narrow margin. Is this shift in the political balance of power likely to affect US support for Ukraine in its fight against Russia? Furthermore, the former president Donald Trump, who has already been involved in two impeachment proceedings, is now under threat of criminal prosecution as he considers running in the next presidential election.

The year closed with fears of a replay of the 2008 financial crisis. The Federal Reserve and the Treasury were forced to step in after several US banks failed, and most notably Silicon Valley Bank (SVB), which mainly funds the tech sector. Major financial groups, such as JPM, Citi, BoA and GS, came to their rescue and succeeded in saving First Republic. These events underscored the role that digitalisation can now play in a liquidity crisis. Investors feverishly turned their attention to the solvency of Crédit Suisse. This time it was the Suisse National Bank that went into action and oversaw UBS' takeover of the embattled bank. Markets are now expecting a pause in monetary tightening, and possibly some unwinding.

The fund's assets under management peaked at USD 529m in September. This coincided with the EUR/USD exchange rate's low point of 0.9550, which is attributable to the Fed's massive rate hikes and the ECB's hesitation to follow suit. The fund's NAV was USD 318m at the end of the year.

As we indicated in the previous report, we were able to benefit from the cycle of rate hikes by maintaining a short average maturity. At the end of the year, our exposure indicators are still extremely short, with WAL at 70 days and WAM at 37 days. The use of swaps enables us to contain interest rate risk by reducing the WAM. We also continue to prefer a high average level of asset quality. The turbulence of recent weeks has prompted us to stay this course and over 50% of the portfolio is A-rated. We are also holding a majority of negotiable debt securities, which are inherently less volatile than bonds.

The fund returned 2.94% net of fees over the year, compared with 2.80% for the SOFR.

ESG APPROACH

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the

lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy.

Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded,

- a strict sectoral exclusion policy concerning controversial weapons in particular.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle—which applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088—is based on the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

Ex-post Addendum to the SFDR Annual Report

Product name: CM-AM DOLLAR CASH Legal entity identifier: 969500GHFQRCFUUAHZ69

Does this financial product have a sustainable investment objective?

A sustainable

investment is an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does no significant harm to either of these objectives and that the company in which the investment is made observes good governance practices.

The EU taxonomy is a classification system established under Regulation (EU) 2020/852, which lists economic activities that are environmentally sustainable. This regulation does not apply to socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

× No Yes It has made sustainable It promoted environmental and social (E/S) investments with an characteristics and, although it did not have environmental objective: a sustainable investment objective, it had a % minimum proportion of 5% sustainable investments: in economic activities that are considered environmentally with an environmental objective in economic sustainable under the EU activities that are considered environmentally taxonomy sustainable under the EU taxonomy in economic activities that are with an environmental objective in not considered X economic activities that are not considered environmentally sustainable environmentally sustainable under the EU under the EU taxonomy taxonomy with a social objective X It has made sustainable It promoted E/S features but did investments with a social not make sustainable objective: __% investments

Sustainable investment objective

Sustainability indicators are used to measure to what extent the financial product has achieved its

sustainability objectives.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. It also promotes environmental and social characteristics by aiming to outperform two of the key sustainability performance indicators of its ESG universe: carbon intensity and having a human rights compliance policy.

What were the results of sustainability indicators?

- The financial product's ESG score is 6.47/10, vs. 4.88 for the money-market universe.
- Carbon intensity was 39.75% at the end of the financial year.
- The human rights indicator revealed no controversy. aucune controverse n'est à déplorer

decisions on sustainability factors

related to

2

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 01/01/2022 to 31/12/2022

| The largest investments | Sector | % of assets | Country |
|---------------------------------|-----------|----------------|---------|
| STANDARD CHARTERED BANK | Finance | 3.23 | US |
| BARCLAYS BANK PLC | Finance | 3.20 | RU |
| MIZUHO BANK LTD (SYDNEY BRANCH) | Finance | 3.19 | AU |
| SWEDBANK AB | Finance | 3.19 | SW |
| ABN AMRO BANK NV | Finance | 3.17 | NL |
| OP CORPORATE BANK PLC | Finance | 3.17 | RU |

| LLOYDS BANK PLC | Finance | 3.14 | RU |
| JYSKE BANK AS | Finance | 3.12 | DK |
| AMCOR UK FINANCE PLC | Materials | 2.60 | RU |

What was the proportion of sustainable investments?

The asset allocation indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

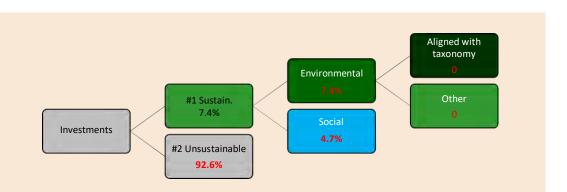

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

| Finance | |
|------------------------|--|
| Materials | |
| Energy | |
| Consumer discretionary | |

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Yes: In fossil gas In nuclear energy

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

taxonomy, the criteria for fossil

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive rules on

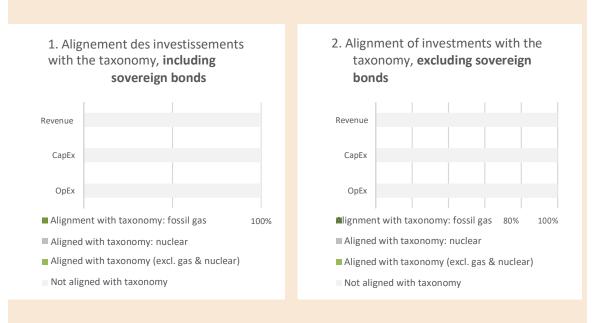

nuclear safety and waste

management.

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

7.40%

What proportion of investments were socially sustainable?

4.70%

- Taxonomy-aligned activities are expressed as a percentage of:

 of revenue
 obtained from the
 green activities of
 investee
 companies;
- Capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

What investments were included in the "Other" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to the various categories. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

Ð

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second-and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

CM-AM PIERRE

2022 was marked by one of the most severe crises in the property sector of the last thirty years. To counter inflation, which had literally exploded, central banks were forced to tighten their monetary policy by sharply raising interest rates. After stagnating at an annual rate of 1% to 2%, inflation surged to more than 5%, with peaks of over 10% in some sectors and in some countries, such as the UK and Belgium. The sharp, unpredictable and unprecedented increased in interest rates depressed the entire property sector. With a fall of 36.5%, the EPRA index posted one of its worst performances of the last 30 years, while the European index was down by only about 10%.

Within the listed property sector, the residential segment fell most sharply, particularly in Germany. Property companies in this segment are highly leveraged and have low profit margins. With a capitalisation rate of around 3% and caps on rents, this segment cannot compete with almost equivalent German ten-year bond yields. Falling transaction volumes and a wait-and-see attitude on the part of investors add to the sector's gloomy outlook. Buyers now have the upper hand in this market, where heavily indebted property companies are forced to reduce or liquidate their portfolios. Logistics companies have also suffered from rising yields, which had fallen to just 4%, compared with over 7% 10 years ago. Furthermore, the risk of recession sparked fears of a decline in shipping volumes. Indeed, such major players as Amazon had announced their intention to cut back on logistics investment, after years of expanding their base in Europe. There was also a drop in online sales against a very high post-Covid base effect. The healthcare sector was hurt by the Orpéa scandal, which has cast doubt on profit margins. Rising energy bills, rents and regulatory constraints are cutting into the profits of nursing home operators. In response to these factors and the rising cost of debt investors are requiring higher returns. Finally, the office segment of the property market has suffered from Covid-19's impact on the traditional office and work habits, as the spread of teleworking has decreased the demand for office space. The segment is seeing divergence between offices in major city centres, which offer superior working environments, and office buildings of lesser quality on city outskirts. However, the low yields of city centres mean that even the most sought-after assets are losing value. Shopping centres are the only segment of the industry that is holding up. This segment recovered in 2022 as consumers gradually returned to shops after the series of Covid lockdowns in 2020 and 2021. Tenants are posting strong revenue growth and sales have returned to their pre-crisis levels. This segment has also invested relatively less over the past few years, which gives it less debt than the rest of the property sector.

The plunge in returns is dizzying, with Vonovia losing 54.6%, VGP 67.65%, Instone 51.5%, Segro 49.64%, CTP 41%, Gecina 22.58%, Intervest 31.77%, Aedifica 34% and Shurgard 25.5%. The only companies to post a gain were Mercyalis (14%) and Klepierre (3.26%).

Management policy

The fund had one of its worst years ever, with RC units plunging 40.25%, IC units 39.78% and RD units 40.24%. This debacle is mainly attributable to the exceptional rise in interest rates resulting from the actions of central bankers to contain surging inflation. As the property sector carries the most debt of all, it has suffered most extensively. The benchmark index fell 36.44%. CM-AM Pierre was disadvantaged by its overweight exposure to the German property market (with positions in LEG, TAG and Instone, for example), and by its positions in Sweden (e.g. K-Fast, K2A and John Mattson), which is a particularly vulnerable market. Finally, the fund suffered from its exposure to the logistics segment, which saw sharp corrections despite higher rent indexation than in other segments of the market. Although the interest-rate shock should be behind us, the weak balance sheets of many property companies and the halt in construction mean that we must be very cautious and selective. Public authorities will play a particularly important role since the demand for housing is still quite strong.

In December, the fund lost 0.74% when interest rates rose at the end of the year after the leading central banks reaffirmed their intention to tighten monetary policy to fight inflation. The resilience of such holdings as Mercialys, CTP and Xior enabled the fund to outperform its index by about 0.9%.

Over the course of the month, we reduced our exposure to Vonovia, Intervest and Care Property (which carry excessive debt) and to KMC Properties and Self Storage, which we feel have risky profiles. On the other hand, we added to in Klepierre and Shurgard, given the quality of their portfolios and resilience.

• ESG APPROACH

SFDR Article 8 - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy.

Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded,

- a strict sectoral exclusion policy concerning controversial weapons in particular.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088 and to the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators are used to measure to what extent the financial product has achieved its sustainability objectives. This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. It also promotes environmental and social characteristics by aiming to outperform two of the key sustainability performance indicators of its ESG universe: human rights policy and percentage of women on boards of directors.

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are the ESG score, the percentage of women on boards of directors, (performance indicator #1), the human rights policy (performance indicator #2) and the proportion of sustainable investments.

- The financial product's ESG score is 6.0/10, with no previous comparison.
- The percentage of women on boards of directors is 39.7%.
 - The proportion of investee companies with a human rights policy was 69.3%.
- The proportion of sustainable investments at the end of the period 79.7%, with no previous comparison.

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

This financial product has a minimum investment requirement of 5% in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding
 principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The investment

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

What were the financial product's main investments?

This table shows the investments that constitute the largest proportions of the financial product's assets over the financial year, i.e. from 31/03/2022 to 31/03/2023

| The largest investments | Sector | % of assets | Country |

_

The **asset allocation** indicates the proportion of investments in specific assets.

The taxonomyaligned activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

What was the proportion of sustainable investments?

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

The financial product has committed to a minimum of 5% sustainable investments relative to total fund assets.

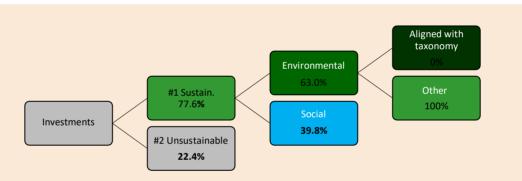

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

Real estate

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

the end of 2035.

management.

X No

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 64%, were not aligned with the EU taxonomy.

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 40.0%.

Taxonomy-aligned activities are expressed as a percentage of:

- Revenue, to measure the share of revenue obtained from the green activities of investee companies:
- Capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "Other" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to the various categories. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

How has this financial product performed compared to the benchmark index?

How did the benchmark index differ from a relevant broad market index?

The fund's benchmark index is the EPRA index, which is a broad market index that is representative of all geographic regions of the market.

How has this financial product performed as measured by the sustainability indicators used to assess the benchmark index's alignment with the environmental or social characteristics promoted?

- The financial product's ESG score is 6.0/10, vs. 5.0 for its index.
- The proportion of investee companies with a human rights policy is 69.3%, vs. 63.1% for the fund's benchmark index.
 - There were 39.7% women on boards of directors, vs. 34.9% for the benchmark index.
- At the end of the year, 79.7% of investments were sustainable, vs. 84.6% for the benchmark index.

How has this financial product performed compared to the benchmark index?

The fund returned -40.3%, vs. -36.2% for its benchmark index.

How has this financial product performed relative to the broad benchmark index?

objective.

Benchmark

CM-AM EUROPE VALUE

Financial markets posted significant gains over the year, despite a succession of unfavourable events. Just as the COVID-19 crisis had come to an end, the conflict between Russia and Ukraine further destabilised markets. This war, together with China's health policy, severely disrupted global supply chains and contributed to a record rise in inflation. The year also marked the end of an exceptional period of zero interest rates, as central banks were forced to end their ultra-accommodative monetary policies against a backdrop of rising inflation. Although the ECB began its cycle of rate hikes after the Federal Reserve did, it made record increases in September and October.

This caused much suffering in financial markets over the first half of the year. The key concerns for investors were spiralling inflation and its corollary, the accelerated tightening of monetary policy. Due to its under-exposure to the energy sector, which benefited greatly from geopolitical factors, the CM-AM Europe Value fund lost almost 15%, slightly underperforming the Value indices. Exposure to the energy sector was increased however over the year, while the most cyclical industrial positions were reduced. Exposure to telecoms was also increased, to augment the portfolio's defensive holdings.

In the second half of the year, the fund gained over 20%, with a particularly vigorous rebound of cyclical stocks starting in October. Markets were complacent in Q1 2023, which ended with substantial gains made possible by fairly reassuring economic data, the reopening of China's economy and a season of better-than-expected corporate earnings. Banks benefited from rising interest rates and better-than-expected results, but suffered from the collapse of SVB in the United States and the fall of Crédit Suisse. The banking sector's underperformance had little impact on the portfolio, which is underweight in financial equities.

During this period, we took profits on the strong gains of our energy positions and added to financials and industrials which benefited from the appreciation of the US dollar.

Over the full year as a whole, the fund's RC units gained 5.06%, RD units 5.06%, IC units 5.85%, S units 5.48% and R units 4.28%.

Industry (+2.8 points) was the biggest contributing sector to the fund's performance, with Siemens, Vinci and Elis posting gains of 2.4%, 17.7% and 28.6% respectively. These three companies have particularly strong business models, pricing power and low debt, all of which are critical to survival and success in an inflationary environment.

The energy and financial sectors also made significant contributions of 1.9 and 1.4 points respectively. Positions in BP (+36.58%) and Total (+26.4%), which benefited from the geopolitical context and the energy crisis, were especially profitable. Banking equities were highly volatile over the year, with a particularly sharp rebound in the first two months of 2023. The main contributors to performance were BBVA (+47.8%), BNP (+13.8%) and Intesa (+22.2%), while Société Générale lost 9.4%.

In a volatile environment, Telecoms (+1.2 points) played its defensive role (D.Telekom and Orange were up 36.9% and 9.4% respectively), as did the Health sector (+0.33 points), while Materials (-1.6 points)—which suffered from higher oil, gas and materials prices—detracted substantially from performance. The most energy-intensive companies (Arcelor, Stora and Wacker) fell by almost 15%, while Solvay gained 22.5% on the back of its ongoing restructuring.

ESG APPROACH

Article 8 SFDR - Taxonomy

This fund's investment strategy employs a methodology developed by Crédit Mutuel Asset Management's ESG analysis department that uses non-financial criteria to exclude securities with the lowest environmental, social and governance ratings, which reduces the fund's sustainability risk exposure.

In making its investment decisions the investment team makes sure to take into consideration the European Union's criteria for determining economic activities that may be deemed sustainable pursuant to EU regulation 2020/852 (the Taxonomy Regulation). Crédit Mutuel Asset Management makes sure to identify all issuers in the fund's portfolio whose activities are eligible for the Taxonomy.

Work is underway to determine a minimum percentage of alignment with the Taxonomy.

The investment strategy also takes principal adverse impacts into account.

Crédit Mutuel Asset Management observes the following policies for all of its funds:

- a policy of monitoring controversies aimed at detecting values on which controversies appear. Based on the analysis performed, the values concerned are maintained or excluded,

- a strict sectoral exclusion policy concerning controversial weapons in particular.

These policies are available on the Crédit Mutuel Asset Management website.

The Do No Significant Harm (DNSH) principle applies only to investments that qualify as sustainable investments under the SFDR Regulation (EU) 2019/2088 and to the European Union's criteria for environmentally sustainable economic activities.

The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

SECTOR POLICIES OBSERVED BY ALL OF THE FUND'S SUB-FUNDS

One of Crédit Mutuel Asset Management's strategic objectives is to develop sector policies that are aligned with Crédit Mutuel Alliance Fédérale's Social and Mutualist Responsibility Policy.

More information on CM-AM's sector policies are available on the Crédit Mutuel Asset Management website.

Observation of these policies is monitored and enforced in three ways:

- with a pre-trade procedure that prevents investment in securities that are prohibited by the sector policies
- with a post-trade procedure that identifies any securities that should be excluded pursuant to the sectoral policies and which are present in the portfolio (other than index funds and formula funds created before November 2019)
- by the CSR Committee, which meets quarterly with General Management and is responsible for supervising and monitoring the observance of sector policies. Among other things, this committee takes note of the Responsible and Sustainable Finance department's qualitative analyses of the issuers subject to the sector policies.

Coal sector policy

Over the past year the fund has implemented NGO Urgewald's updated Global Coal Exit List, which is the benchmark for our sector exclusion policy.

The list now includes a total of 3,091 securities issuers broken down into the following categories:

- 1,124 coal developers
- 1,967 issuers which fail to comply with one or more of the following four criteria of our sector exclusion policy:
- Annual coal production < 10 MT
- Installed coal-fired capacity < 5 GW
- Proportion of revenue from thermal coal < 20%
- Proportion of coal in the energy mix < 20%.

The CSR Committee, a governance body which monitors compliance with our sector policies, has confirmed the "Authorised" status of 10 issuers on the 2022 GCEL which have committed to a plan to phase out coal by 2030.

Our sector policy thus excludes 99.7% of the issuers on the 2022 GCEL. One of the reasons this percentage is so high is the automatic exclusion of the entire group to which an excluded issuers belongs.

Defence and security sector policy

The objectives of the defence and security sector exclusion policy are to:

- exclude companies involved in controversial weapons, non-conventional weapons and weapons of mass destruction; and
- monitor controversies involving companies that are associated with military combat weapons.

With regard to conventional weapons activities, Crédit Mutuel Asset Management's Responsible and Sustainable Finance department pays particular attention to companies with activities that are associated with military combat weapons and which are involved in severe defence and security related controversies. Its assessment may result in exclusion.

Over the last 18 months, the fund management company has excluded no new issuers nor placed any under review.

Hydrocarbon sector policy

In 2022, CM-AM was busy preparing a hydrocarbon sector policy to be deployed on 1 January 2023, in compliance with Crédit Mutuel Alliance Fédérale's sector policies.

Among other things this policy freezes investments in issuers which appear on Urgewald's Global Oil and Gas Exit List (GOGEL) and for which unconventional hydrocarbons account for over 25% of total production as of 1 January 2023.

The following hydrocarbons are considered unconventional in accordance with Urgewald's definition:

- shale oil or gas
- oil from tar sands
- heavy and extra-heavy oil
- deepwater oil
- oil extracted in the Arctic
- coalbed methane.

As of 1 January 2023, the application of this sector policy will exclude 481 issuers out of a total of 789 on the 2022 GOGEL, for an exclusion rate of 61%.

Sustainable investment objective

A sustainable

investment is an investment in an economic activity that contributes to an environmental or social objective, provided that the investment does no significant harm to either of these objectives and that the company in which the investment is made observes good governance practices.

The EU taxonomy is a classification system established under Regulation (EU) 2020/852, which lists economic activities that are environmentally sustainable. This regulation does not apply to socially sustainable economic activities. Sustainable investments with an environmental objective are not necessarily aligned with the taxonomy.

| Does this financial product have a sustainable investment objective? | | | | | |

To what extent has this financial product achieved the environmental and/or social characteristics promoted?

Sustainability indicators are used to measure to what extent the financial product has achieved its sustainability objectives. This financial product adopts a selective approach that eliminates 20% of the investment universe issuers having the lowest ESG ratings on the basis of an internal ESG scoring methodology. It also promotes environmental and social characteristics by aiming to outperform two of the key sustainability performance indicators of its ESG universe: the percentage of women on boards of directors and the number of human rights related controversies

What were the results of sustainability indicators?

The sustainability indicators used by this financial product are the ESG score, the percentage of women on the board of directors (performance indicator 1), number of human rights controversies (performance indicator 2) and the proportion of sustainable investments.

- The financial product's ESG score is 6.5/10, with no previous comparison.
- The percentage of women on boards of directors is 42.9%, with no previous comparison
- There were no human rights controversies at the end of the period, with no previous comparison.
- The proportion of sustainable investments at the end of the period was 62.2%, with no previous comparison

... and in comparison with prior periods?

NA

What were the sustainable investment objectives targetted by the financial product and how did sustainable investment contribute to these objectives?

This financial product has a minimum investment requirement (30%) in companies and/or issuers which Crédit Mutuel Asset Management has identified as "sustainable" on the basis of its internal methodology. The United Nations' Sustainable Development Goals are used to determine which investments contribute to an environmental or social objective.

To what extent have the financial product's sustainable investments not caused significant harm to an environmentally or socially sustainable investment objective?

How were adverse impact indicators used?

Were the sustainable investments in line with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights?

In accordance with its policy of identifying sustainable investments, Crédit Mutuel Asset Management has assessed the principal adverse impacts that could cause significant harm and thus weaken the proposed positive environmental and/or social contributions, which are initially measured as the proportion of revenue aligned with the Sustainable Development Goals (SDGs).

The following were used to assess the potential for significant harm:

- Sectoral exclusion rules for investment activities in sectors with high environmental and social risks, such as coal and mining.
- Normative exclusion rules involving controversial weapons and respect for human rights
- The exclusion of companies that violate the principles of the United Nations Global Compact and the guiding
 principles of the Organisation for Economic Co-operation and Development (OECD)
- Crédit Mutuel Asset Management's proprietary ESG methodology and rating system, which addresses principal adverse impacts (PAI).

All PAI indicators (see table 1 of SFDR RTS annex 1) are thus accounted for, either directly (with indicators of noncompliance with UN Global Compact and OECD principles), or using the data underlying Crédit Mutuel Asset Management's proprietary ESG score as a proxy. In the latter case, each PAI was associated with a sub-pillar of its corresponding proprietary ESG score.

Crédit Mutuel Asset Management's Sustainable Investment model can therefore take into consideration adverse impacts and the guiding principles of the OECD and the United Nations before an investment decision is made and thus avoid exposure to a company or issuer identified as possibly causing significant harm to the environment or society.

Principal adverse impacts are the most significant negative impacts of investment decisions on sustainability factors related to environmental, social and human resources issues, respect for human rights and the prevention of corruption and bribery.

The **investment**

strategy ensures that investment decisions are aligned with such factors as investment objectives and risk tolerance.

How has this financial product addressed the principal adverse impacts on sustainability factors?

In conjunction with the proportion of revenue contributing to the SDGs, the principal adverse impacts were used to determine whether or not investments were sustainable (see previous question). The financial product's manager was also able to obtain the raw data underlying the sustainability indicators from the data provider ISS. The principal adverse impacts were therefore addressed both directly (by using and monitoring the raw data) and indirectly (by including them in the proprietary methodology for determining sustainable investment).

This table shows the investments that constitute **the largest proportions of the financial product's assets** over the financial year, i.e. from 31/03/2022 to 31/03/2023

What were the financial product's main investments?

| The largest investments | Sector | % of assets |
|----------------------------|---------------------------|----------------|
| SANOFI | Healthcare | 3.8 % |
| VINCI | Industry | 3.7 % |
| DEUTSCHE TELEKOM | Communication services | 3.7 % |
| SIEMENS | Industry | 3.5 % |
| BNP PARIBAS ACT.A | Finance | 3.2 % |
| STELLANTIS | Consumer discretionary | 3.1 % |
| BP | Energy | 3.0 % |
| RENAULT | Consumer discretionary | 2.7 % |
| VEOLIA ENVIRONNEMENT | Utilities | 2.7 % |
| ELIS | Industry | 2.6 % |

The **asset allocation** indicates the proportion of investments in specific assets.

The **taxonomyaligned** activities are expressed as a percentage of:

- revenue, to measure the share of revenue obtained from the green activities of investee companies;
- capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- operating expenditure (OpEx) to measure the green activities of the investee companies

What was the proportion of sustainable investments?

How were assets allocated?

The graphic below shows the allocation between sustainable investments (environmental or social) and unsustainable investments.

The financial product has committed to a minimum of 30% sustainable investments relative to total fund assets.

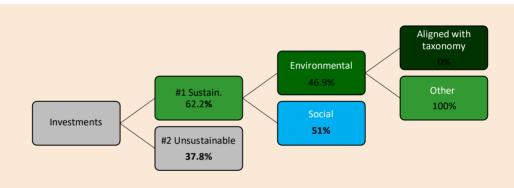

The indicator used to determine the percentage of sustainable investment is derived from Crédit Mutuel Asset Management's proprietary methodology for determining the "sustainability" of investments.

This methodology is composed of the following three steps:

- identifying companies and other issuers that obtain over 5% of their revenue from activities that contribute to sustainable development goals
- assessing the principal impacts that may adversely affect the proposed positive contributions
- assessing corporate governance practices.

This methodology enables companies and other issuers to be classified as 'sustainable' or 'unsustainable'.

Excluding ancillary cash assets and derivatives (which may constitute up to 10% of the fund's assets as per its prospectus), all securities (i.e. 90% of assets) are thus considered to be 'sustainable' on the basis of the aforementioned methodology.

Category **#1 Sustainable** comprises sustainable investments with an environmental or social objective: Category **#2 Unsustainable** comprises all investments that are not considered to be sustainable.

In which economic sectors have investments been made?

Most investments have been in the following sectors:

| Healthcare | 9.4 |
|--------------------------|------|
| Information technologies | 2.4 |
| Industry | 23.5 |
| Materials | 8 |
| Consumer discretionary | 9.5 |
| Consumer staples | 5 |
| Finance | 17.3 |
| Communication services | 6.1 |
| Utilities | 6.2 |

To what extent were sustainable investments with an environmental objective aligned with the EU Taxonomy?

The vast majority of data relating to the proportion of the activities of companies and other issuers that are aligned with the taxonomy (i.e. revenue, CapEx and OpEx) are estimates provided by ESG data providers. Since these data are not provided directly by the companies/issuers but extrapolated by external parties, we have chosen not to publish EU taxonomy related estimates, as recommended by the Autorité des Marchés Financiers (AMF).

None of our investments are therefore considered to be aligned with the EU taxonomy.

Has the financial product invested in fossil gas and/or nuclear energy activities that comply with the EU taxonomy?

Enabling activities directly enable other activities to make a substantial contribution to achieving an environmental objective.

To comply with the EU

taxonomy, the criteria for fossil

gas include emission limits and a switch to 100% renewable electricity or low-carbon fuels by the end of 2035.

For **nuclear energy**, the criteria include comprehensive rules on

nuclear safety and waste

management.

Transitional activities are activities for which low-carbon alternatives do not yet exist and with greenhouse gas emission levels that represent the current best achievable performance.

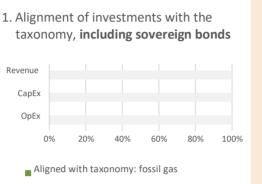

The two graphs below show in green the minimum percentage of investments aligned with the EU taxonomy. As there is no appropriate methodology for determining the taxonomy-alignment of sovereign bonds^{*}, the first graph shows the alignment of all of the financial product's investments, including sovereign bonds, while the second graph shows the alignment of all investments excluding sovereign bonds.

Taxonomy-aligned

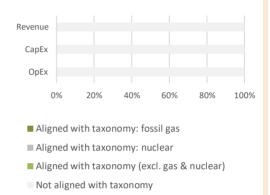

activities are expressed as a percentage of:

- Revenue, to measure the share of revenue obtained from the green activities of investee companies;
- Capital expenditure (CapEx), to measure the green investments made by the investee companies, for example for the green transition;
- Operating expenditure (OpEx) to measure the green activities of the investee companies

- Aligned with taxonomy: nuclear
- Aligned with taxonomy (excl. gas & nuclear)
- Not aligned with taxonomy

Alignment of investments with the taxonomy, excluding sovereign bonds

*In the above charts, 'sovereign bonds' include all sovereign exposures.

What proportion of investments were made in transitional and enabling activities? NA

How does the percentage of investments aligned with the EU taxonomy compare with previous years?

NA

What proportion of sustainable investments with an environmental objective were not aligned with the EU taxonomy?

All sustainable investments with an environmental objective, i.e. 100%, were not aligned with the EU taxonomy.

What proportion of investments were socially sustainable?

The proportion of socially sustainable investment was 51%.

This symbol represents environmentally sustainable investments that do not take into account the criteria applicable to environmentally sustainable economic activities under the EU taxonomy.

What investments were included in the "Other" category, what was their purpose and were there any applicable minimum environmental or social guarantees?

This financial product could invest in French and foreign UCITS funds, within the limits set out in the prospectus. Wherever possible, the 'sustainable' characteristics of underlying assets were identified transparently and the assets were then allocated to the various categories. The fund manager made sure to select funds that have received the French SRI label (or an equivalent) and/or which incorporate non-financial or sustainability considerations, so as to ensure that environmental, social and governance issues are addressed and to minimise the sustainability risks of exposure to the underlying funds.

A proportion of cash assets was held to ensure sufficient liquidity and accommodate subscriptions and redemptions. Since cash assets do not have a sustainable characteristic, they were included in the 'Unsustainable' category. Wherever possible, the underlying assets of money-market and other funds were reviewed transparently and allocated in either the 'Sustainable' or 'Unsustainable' category using Crédit Mutuel Asset Management's Sustainable Investment model. Similarly, where possible some derivatives identified as 'unsustainable' were also included in these other 'unsustainable' investments.

What steps were taken to comply with environmental and/or social characteristics over the reference period?

A series of first-level controls is implemented by the investment teams. These controls ensure compliance with the sustainability constraints set out in the pre-contractual documents. These controls are supplemented with second- and third-level controls.

These various controls ensure ESG scoring of at least 90% of assets and that 20% of the lowest-rated companies/issuers within the investment universe are excluded. For SRI-labelled funds, the aforementioned controls also include coverage rates and the financial product's two mandatory sustainability indicators.

Lastly, we check that investments are sustainable and that the minimum percentage stated in the pre-contractual documents is complied with at all times.

3. Broker fees

Pursuant to the AMF's General Regulations, the report on the fund's broker fees is available on CM-AM's website at www.creditmutuel-am.eu and/or from CREDIT MUTUEL ASSET MANAGEMENT, 4 rue Gaillon, 75002 Paris.

4. Voting policy

Pursuant to the AMF's General Regulations, information on CM-AM's voting policy and a report on its voting are available on its website and/or at its registered office. The voting policy is inline with the investment policy, the objective of which is to seek consistent long-term performance in accordance with the fund's investment guidelines. It takes into account the specific requirements of each country's company law and corporate governance regulations.

The fundamental principles of CREDIT MUTUEL ASSET MANAGEMENT's voting policy:

- Respect for minority shareholder rights and the equitable treatment of shareholders
- Quality and transparency of information provided to shareholders
- Balance of power between management bodies
- Sustainability and integration of long-term investee strategies
- Supporting best practices in corporate governance. In employee share ownership funds, the Supervisory Board exercises the voting rights attached to the company's shares.

5. <u>Procedure for selecting and evaluating brokers and</u> <u>counterparties</u>

The list of selected brokers is reviewed at least once a year by the management company. Each broker is selected on the basis of an overall annual score, which determines whether or not the broker is kept on the list of authorised brokers. The score obtained is based on what are considered to be the most pertinent factorrs, which are in descending order of importance: the broker's commitment to trading volumes and delivery, quality of execution, responsiveness when receiving/placing orders, the

number of settlement/delivery incidents, and the relevance of the information provided. Compliance with the fees negotiated is essential to remaining on the approved brokers list.

6. Environmental, social and governance (ESG) criteria

CM-AM INSTITUTIONAL SHORT TERM

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM GLOBAL GOLD

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM SUSTAINABLE PLANET

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe; stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the above-mentioned approaches.

CM-AM INFLATION

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM GLOBAL LEADERS

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the aforementioned approaches.

CM-AM GREEN BONDS

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the aforementioned approaches.

CM-AM ENTREPRENEURS EUROPE

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM GLOBAL INNOVATION

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM HIGH YIELD 2024

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM SHORT TERM BONDS

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM CONVICTIONS EURO

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the aforementioned approaches.

CM-AM SMALL & MIDCAP EURO

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the aforementioned approaches.

CM-AM FLEXIBLE EURO

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the above-mentioned approaches.

CM-AM CONVERTIBLES EURO

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the above-mentioned approaches.

CM-AM GLOBAL CLIMATE CHANGE

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the above-mentioned approaches.

CM-AM GLOBAL EMERGING MARKETS

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM EUROPE GROWTH

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the above-mentioned approaches.

CM-AM DOLLAR CASH

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM PIERRE

This fund is managed using measurable targets that address non-financial criteria. Although these criteria are a component of the investment process, they do not have a predetermined weight in the final investment decision process. These non-financial or ESG criteria are observed by applying an ESG rating or indicator that exceeds the average rating or indicator of the investment universe.

CM-AM EUROPE VALUE

This fund is managed using measurable targets that address non-financial criteria. The fund's commitment to sustainable investment is quite significant and is implemented through one or more of the following approaches: rating-upgrade relative to the investable universe, stricter selectivity relative to the investable universe, ESG indicator improvement relative to the investable universe, and any other documented and material approach, including any combination of the above-mentioned approaches.

7. <u>Remuneration policy</u>

Crédit Mutuel Asset Management's remuneration policy complies with the remuneration principles of Crédit Mutuel Alliance Fédérale (see the Banque Fédérative du Crédit Mutuel website / Investor Relations / Financial/regulated information) and with regulatory requirements. Crédit Mutuel Alliance Fédérale has established a Remunerations Committee that oversees all of its subsidiaries.

The remuneration policy that applies to investment fund managers is subject to Directives 2014/91/EU of 23 July 2014 (UCITS V) and 2011/61/EU of 8 June 2011 (the AIFM Directive) and to their implementing legislation.

A. Application

Caisse Fédérale de Crédit Mutuel's Remuneration Committee conducts an annual review of the remuneration policy principles and expresses its opinion on senior management's proposals after consulting with the Risk and Compliance department.

For Crédit Mutuel Asset Management, an employee's remuneration is based on the following criteria in particular: the performance of the fund(s) managed by the employee, his or her contribution to the company's activities and compliance with risk and compliance rules. More information is available on Crédit Mutuel Asset Management's website.

B. Identified staff

Crédit Mutuel Asset Management identifies risk-takers on the basis of the following two criteria:

- Role and responsibility, to determine risk-takers at the Management Company level and for the funds managed;
- Remuneration.

Identified staff include:

- the Chief Executive Officer, the Deputy Chief Executive Officer, the Chief Investment officer, and the heads of the following functions and departments: the Investment and Responsible and Sustainable Finance functions, the Legal and Financial department, the Distributor Relations department, the Risk Management department, the Support Services department, the Human Resources department and the Chief Compliance and Internal Control Officer.
- Crédit Mutuel Asset Management's fund managers.

C. Remuneration

Some of Crédit Mutuel Asset Management's identified staff members receive discretionary bonuses in addition to their fixed remuneration. These people are mainly fund managers and senior managers. To limit risk-taking, discretionary remuneration arrangements must take into account both financial performance and risk management. Risk management, the observance of ethical principles and the client's interests must always take precedence over financial performance.

Crédit Mutuel Asset Management may decide not to grant these discretionary bonuses if circumstances so justify. These individual bonuses may be reduced or even entirely withheld under certain circumstances, notably if the clients' interests are infringed or in the event of a serious breach of ethics. Guaranteed bonuses are paid on an exceptional basis, and only when a new staff member is recruited and then only the first year.

In 2022, the gross remuneration paid to the 260 people employed during the year totalled $\in 18,048,053$, of which bonuses accounted for $\in 1,405,500$. Remuneration paid to staff having an impact on the management company's risk profile totalled $\in 7,434,093$.

Discretionary bonuses for a given year are paid in March of the following year when the year's results have been determined.

These bonuses are limited to a unitary annual amount of $\leq 100,000$ and must be paid in a single payment. If a review of the remuneration policy enables the payment of discretionary bonuses exceeding $\leq 100,000$, Crédit Mutuel Asset Management will inform the AMF in advance and will bring its remuneration policy into compliance with the UCITS V and AIFM directives, which includes specifying the terms by which the payment of the bonus is spread out over at least three years.

8. Calculation of overall risk exposure

CM-AM INSTITUTIONAL SHORT TERM

The overall risk on financial contracts is determined using the absolute value-at-risk method.

CM-AM GLOBAL GOLD

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM SUSTAINABLE PLANET

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM INFLATION

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM GLOBAL LEADERS

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM GREEN BONDS

The overall risk on financial contracts is determined using the absolute value-at-risk method.

CM-AM ENTREPRENEURS EUROPE

The overall risk exposure on financial contracts is determined using the commitment method.

CM-AM GLOBAL INNOVATION

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM HIGH YIELD 2024

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM SHORT TERM BONDS

The overall risk on financial contracts is determined using the absolute value-at-risk method.

CM-AM CONVICTIONS EURO

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM SMALL & MIDCAP EURO

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM FLEXIBLE EURO

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM CONVERTIBLES EURO

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM GLOBAL CLIMATE CHANGE

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM GLOBAL EMERGING MARKETS

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM EUROPE GROWTH

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM DOLLAR CASH

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM PIERRE

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM EUROPE VALUE

The overall risk exposure to derivatives contracts is determined using the commitment method.

CM-AM INSTITUTIONAL SHORT TERM

The VaRs in this table are calculated using the Monte Carlo method, with a 20-day horizon and a confidence interval of 99%.

| VAR method | | | |
|------------------------|---------|---------|---------|
| Leverage at 31/03/2023 | Minimum | Maximum | Average |
| 71% | 0.49% | 1.84% | 1.12% |

CM-AM GREEN BONDS

II. ALLOCATION OF DISTRIBUTABLE AMOUNTS

The consolidated earnings for the year totalled \in 36,618,123.27 and consisted of an annual net income of \in 43,692,234.43 and net accrued expenses of \in 7,074,111.15. In accordance with the Articles of Association, we propose that these amounts be allocated as follows:

• For the CM-AM INSTITUTIONAL SHORT TERM sub-fund, a distributable profit of €3,069,289.12, consisting of annual net income of €3,709,976.54, net accrued expenses of €640,696.76 and the previous year's retained earnings of €9.34 brought forward, allocated as follows:

IC unit class: Accumulation of €195,149.10.

RC unit class: Accumulation of €2,803,780.98.

El unit class: Accumulation of €45,076.34.

RD unit class: Partial distribution of €25,269.02, for a total net dividend per share of €10.73. **RD unit class:** Retention of €13.68.

In accordance with the French general tax code, we inform the reader that the following dividends were distributed over the past three financial years:

Year ended 31/03/2022: **RD unit class:** €0.42, with no tax credit. **RC unit class:** No dividend. **IC unit class:** No dividend. **El unit class:** No dividend. • For the CM-AM GLOBAL GOLD sub-fund, a distributable loss of €1,046,441.34, consisting of an annual net loss of €842,779.46 and net accrued expenses of €203,661.88, which was allocated as follows:

RC unit class: Accumulation of \in -1,359,008.31. **ER unit class:** Accumulation of \notin 2,073.37. **S unit class:** Accumulation of \notin 256,194.47. **IC unit class:** Accumulation of \notin 54,299.13.

No dividends have been paid out over the past three financial years.

• For the CM-AM SUSTAINABLE PLANET sub-fund, a distributable profit of €770,845.61, consisting of annual net income of €532,279.67 and net accrued income of €238,565.94, allocated as follows:

RC unit class: Accumulation of €366,556.73. **S unit class:** Accumulation of €399,149.12. **IC unit class:** Accumulation of €5,139.76.

No dividends have been paid out over the past three financial years.

• For the CM-AM INFLATION sub-fund, a distributable profit of €170,337.36, consisting of annual net income of €196,435.69 and net accrued expenses of €26,098.33, allocated as follows:

RC unit class: Accumulation of \in 141,011.49. **IC unit class:** Accumulation of \in 2.48. **S unit class:** Accumulation of \in 29,323.39.

No dividends have been paid out over the past three financial years.

• For the CM-AM GLOBAL LEADERS sub-fund, a distributable loss of €5,004,367.45, consisting of an annual net loss of €4,949,492.39 and net accrued expenses of €54,875.06, allocated as follows:

ER unit class: Accumulation of \in -127,490.50. **S unit class:** Accumulation of \in 25,396.86. **RC unit class:** Accumulation of \in -4,946,755.15. **IC unit class:** Accumulation of \in 44,481.34.

No dividends have been paid out over the past three financial years.

• For the CM-AM GREEN BONDS sub-fund, a distributable profit of €360,077.23, consisting of annual net income of €361,742.61 and net accrued expenses of €1,665.38, allocated as follows:

RC unit class: Accumulation of €20,271.06.

IC unit class: Accumulation of €339,806.17.

No dividends have been paid out over the past three financial years.

• For the CM-AM ENTREPRENEURS EUROPE sub-fund, a distributable loss of €1,662,577.72, consisting of an annual net loss of €1,665,210.05 and net accrued income of €2,632.33, allocated as follows:

RC unit class: Accumulation of €-1,665,744.46. **S unit class:** Accumulation of €2,654.43. **IC unit class:** Accumulation of €512.31.

No dividends have been paid out over the past three financial years.

• For the CM-AM GLOBAL INNOVATION sub-fund, a distributable loss of €955,073.35, consisting of an annual net loss of €1,009,457.87 and net accrued income of €54,384.52, allocated as follows:

S unit class: Accumulation of \in -118,635.61. **IC unit class:** Accumulation of \in -29,926.59. **RC unit class:** Accumulation of \in -806,511.15.

No dividends have been paid out over the past three financial years.

• For the CM-AM HIGH YIELD 2024 sub-fund, a distributable profit of €5,463,395.93, consisting of annual net income of €5,382,952.42, net accrued income of €80,369.05 and previous year retained earnings of €74.46 brought forward, allocated as follows:

IC unit class: Accumulation of €1,140,430.54. S unit class: Accumulation of €2,071,682.16. RC unit class: Accumulation of €2,185,694.31. RD unit class: Partial distribution of €65,384.34, for a total net dividend per share of €2.18. RD unit class: Retention of €204.58.

In accordance with the French general tax code, we inform the reader that the following dividends were distributed over the past three financial years:

Year ended 20/07/2020: **S unit class:** No dividend. **RD unit class:** €1.72, with no tax credit. **RC unit class:** No dividend. **IC unit class:** No dividend.

Year ended 31/03/2021: **S unit class:** No dividend. **RD unit class:** €1.52, with no tax credit. **RC unit class:** No dividend. **IC unit class:** No dividend.

Year ended 31/03/2022: **S unit class:** No dividend. **RD unit class:** €2.29, with no tax credit. **RC unit class:** No dividend. **IC unit class:** No dividend.

• For the CM-AM SHORT TERM BONDS sub-fund, a distributable profit of €2,733,561.50, consisting of annual net income of €2,994,295.33 and net accrued expenses of €260,733.83, allocated as follows:

IC unit class: Accumulation of €2,733,561.50.

No dividends have been paid out over the past three financial years.

• For the CM-AM CONVICTIONS EURO sub-fund, a distributable profit of €6,872,600.17, consisting of annual net income of €6,748,504.70 and net accrued income of €124,095.47, allocated as follows:

IC unit class: Accumulation of €1,420,254.46. S unit class: Accumulation of €1,551,305.13. RC unit class: Accumulation of €3,901,040.58. No dividends have been paid out over the past three financial years.

• For the CM-AM SMALL & MIDCAP EURO sub-fund, a distributable profit of €482,329.34, consisting of annual net income €681,999.88 and net accrued expenses of €199,670.54, allocated as follows:

RC unit class: Accumulation of \in -116,533.19. **IC unit class:** Accumulation of \in 520,203.31. **S unit class:** Accumulation of \in 78,659.22.

No dividends have been paid out over the past three financial years.

• For the CM-AM FLEXIBLE EURO sub-fund, a distributable profit of €4,394,535.93, consisting of an annual net loss of €40,445.18 and net accrued income of €4,434,981.11, allocated as follows:

IC unit class: Accumulation of €26.04.

RC unit class: Accumulation of €4,394,509.89.

No dividends have been paid out over the past three financial years.

• For the CM-AM CONVERTIBLES EURO sub-fund, a distributable loss of €332,959.11, consisting of an annual net loss of €346,656.80 and net accrued income of €13,697.69, allocated as follows:

RC unit class: Accumulation of €-317,393.04. **IC unit class:** Accumulation of €37,969.33. **RD unit class:** Accumulation of €-52,701.65. **S unit class:** Accumulation of €-833.75.

No dividends have been paid out over the past three financial years.

• For the CM-AM GLOBAL CLIMATE CHANGE sub-fund, a distributable loss of €379,518.85, consisting of an annual net loss of €379,556.02 and net accrued income of €37.17, allocated as follows:

S unit class: Accumulation of €-14,632.39. **RC unit class:** Accumulation of €-370,571.95. **IC unit class:** Accumulation of €5,685.49.

No dividends have been paid out over the past three financial years.

• For the CM-AM GLOBAL EMERGING MARKETS sub-fund, a distributable profit of €1,871,342.88, consisting of annual net income of €1,870,637.83 and net accrued income of €705.05, allocated as follows:

RC unit class: Accumulation of €1,468,818.81. **IC unit class:** Accumulation of €25,144.49. **S unit class:** Accumulation of €369,872.45. **ER unit class:** Accumulation of €7,507.13.

No dividends have been paid out over the past three financial years.

• For the CM-AM EUROPE GROWTH sub-fund, a distributable loss of €196,367.01, consisting of an annual net loss of €813,364.75 and net accrued income of €616,997.74, allocated as follows:

ER unit class: Accumulation of €-1,112.07. **S unit class:** Accumulation of €246,991.08.

RC unit class: Accumulation of €-441,964.02.

IC unit class: Accumulation of €5,556.83.

R unit class: Accumulation of €-5,838.8

No dividends have been paid out over the past three financial years.

• For the CM-AM DOLLAR CASH sub-fund, a distributable profit of \$8,279,640.60, consisting of annual net income of \$10,671,289.93 and net accrued expenses of \$2,391,649.33, allocated as follows:

IC unit class: Accumulation of \$8,279,640.60.

No dividends have been paid out over the past three financial years.

• For the CM-AM PIERRE sub-fund, a distributable profit of €3,568,226.76, consisting of annual net income of €3,645,438.74, net accrued expenses of €79,104.78, and prior year retained earnings brought forward of €1,892.80, allocated as follows:

RC unit class: Accumulation of €2,305,727.42.

No net capital gains have been distributed over the past three financial years.

• €2,974,967.09 For the CM-AM GLOBAL INNOVATION sub-fund, allocated as follows: **RC unit class:** Accumulation of €2,241,250.6.

IC unit class: Accumulation of €213,455.5.

S unit class: Accumulation of €520,260.8.

No net capital gains have been distributed over the past three financial years.

€-5,505,576.81 For the CM-AM HIGH YIELD 2024 sub-fund, allocated as follows:
IC unit class: Accumulation of €-1,109,474.0.
S unit class: Accumulation of €-2,015,449.1.
RC unit class: Accumulation of €-2,311,627.7.
RD unit class: Accumulation of €-69,025.9.

No net capital gains have been distributed over the past three financial years.

• €-1,780,496.41 For the CM-AM SHORT TERM BONDS sub-fund, allocated as follows: **IC unit class:** Accumulation of €-1,780,496.4.

No net capital gains have been distributed over the past three financial years.

€-9,150,551.72 For the CM-AM CONVICTIONS EURO sub-fund, allocated as follows:
 S unit class: Accumulation of €-1,353,928.0.
 RC unit class: Accumulation of €-6,805,712.0.
 IC unit class: Accumulation of €-990,911.6.

No net capital gains have been distributed over the past three financial years.

€-5,184,414.19 For the CM-AM SMALL & MIDCAP EURO sub-fund, allocated as follows:
 RC unit class: Accumulation of €-2,170,515.2.
 IC unit class: Accumulation of €-2,450,566.2.
 S unit class: Accumulation of €-563,332.6.

No net capital gains have been distributed over the past three financial years.

• €-25,363,830.97 For the CM-AM FLEXIBLE EURO sub-fund, allocated as follows: **RC unit class:** Accumulation of €-25,363,732.2. **IC unit class:** Accumulation of €-98.68.

No net capital gains have been distributed over the past three financial years.

• €-3,832,753.42 For the CM-AM CONVERTIBLES EURO sub-fund, allocated as follows: IC unit class: Accumulation of €-1,351,185.5. S unit class: Accumulation of €-187,614.1. RC unit class: Accumulation of €-2,360,535.6.

RD unit class: Retention of €66,581.8.

No net capital gains have been distributed over the past three financial years.

• €-7,613,355.76 For the CM-AM GLOBAL CLIMATE CHANGE sub-fund, allocated as follows:

S unit class: Accumulation of \in -1,591,356.4.

RC unit class: Accumulation of €-5,147,692.1.

IC unit class: Accumulation of €-874,307.2.

No net capital gains have been distributed over the past three financial years.

• €-18,887,611.48 For the CM-AM GLOBAL EMERGING MARKETS sub-fund, allocated as follows:

IC unit class: Accumulation of €-138,187.6.

RC unit class: Accumulation of €-16,522,860.0.

S unit class: Accumulation of €-2,142,120.3.

ER unit class: Accumulation of €-84,443.4.

No net capital gains have been distributed over the past three financial years.

€29,888,901.58 For the CM-AM EUROPE GROWTH sub-fund, allocated as follows:
S unit class: Accumulation of €1,065,747.7.
R unit class: Accumulation of €12,188.8.
IC unit class: Accumulation of €12,405.8.
RC unit class: Accumulation of €28,726,347.0.
ER unit class: Accumulation of €72,212.1.
No net capital gains have been distributed over the past three financial years.

• \in -1,104,292.62 For the CM-AM DOLLAR CASH sub-fund, allocated as follows: **IC unit class:** Accumulation of \in -1,104,292.62\$.

No net capital gains have been distributed over the past three financial years.

• €-32,297,886.81 For the CM-AM PIERRE sub-fund, allocated as follows: **RD unit class:** Accumulation of €-11,314,411.6. **RC unit class:** Accumulation of €-20,983,206.9. **IC unit class:** Accumulation of €-268.2.

The following net capital gains were distributed over the past three financial years: Year ended 20/07/2020: **RD unit class:** €0.4, with no tax credit. **RC unit class:** No dividend. **IC unit class:** No dividend.

Year ended 31/03/2021: **RD unit class:** No dividend. **RC unit class:** No dividend. **IC unit class:** No dividend.

Year ended 31/03/2022:

RD unit class: No dividend. **RC unit class:** No dividend.

IC unit class: No dividend.

€-17,537,105.44 For the CM-AM EUROPE VALUE sub-fund, allocated as follows:
RC unit class: Accumulation of €-11,440,256.4.
RD unit class: Accumulation of €-2,122,183.5.
R unit class: Accumulation of €-2,990.1.
S unit class: Accumulation of €-3,930,425.8.
IC unit class: Accumulation of €-41,249.4.

No net capital gains have been distributed over the past three financial years.

We propose to begin paying out these amounts on 28/07/2023. All holders of units paying dividends and outstanding at that date will be entitled to these distributions.

III. CORPORATE GOVERNANCE

Pursuant to Order 2017-1162 of 12 July 2017, Decree 2017-1174 of 18 July 2017 and Article L. 225-37 of the French commercial code, we provide you with the following information:

1. <u>Offices and positions held in all companies by each director</u> <u>during the financial year (as per Article L. 225-37-4-1° of the</u> <u>French commercial code)</u>

NOTES TO THE AGGREGATED ACCOUNTS OF CM-AM SICAV, A UCITS UMBRELLA FUND IN ACCORDANCE WITH CNC NOTICE NO 2005 - 08 OF 21 JUNE 2005

- <u>The accounts aggregation method:</u>

The balance sheet, off-balance sheet and income statement of a UCITS umbrella fund are prepared by aggregating its sub-funds. Units held in a sister sub-fund are eliminated from the balance sheet by reducing the "CIU units" and "Capital" items by the value of the units held.

- <u>The currency used to aggregate the sub-fund accounts is the EUR.</u>

- <u>The sub-funds, their currency of account, and the exchange rate used to aggregate the</u> <u>accounts are shown below:</u>

| Sub-fund | Currency of account | Exchange rate |
|--------------------------------|---------------------|-----------------|
| CM-AM INSTITUTIONAL SHORT TERM | EUR | |
| CM-AM GLOBAL GOLD | EUR | |
| CM-AM SUSTAINABLE PLANET | EUR | |
| CM-AM INFLATION | EUR | |
| CM-AM GLOBAL LEADERS | EUR | |

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

RD unit class: Income: distribution and/or accumulation Capital gains/losses: 100% accumulation

El unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

| • Tixed management lees and operating expenses (maximum rates) | | | |

| IC | FR0014007LZ3 | N/A. |

• Performance fees

FR0007033477 RC unit class

30%, including tax, of the return above the compounded €STR benchmark index + 0.15%, net of fixed management fees, even if this return is negative.

(1) The performance fee is calculated using the benchmark method.

The excess return to which the 30% tax-included rate applies is the difference between:

- the fund's net asset value, net of fixed management fees and before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return equivalent to that of the benchmark index over the calculation period and with the same variations in subscriptions and redemptions as the fund:

(2) As of the financial year beginning on 01/04/2024, all underperformance relative to the fund's benchmark index over the past five years must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

(4) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year.

FR0010290924 RD unit class

30%, including tax, of the return above the compounded €STR benchmark index + 0.15%, net of fixed management fees, even if this return is negative.

(1) The performance fee is calculated using the benchmark method.

The excess return to which the 30% tax-included rate applies is the difference between:

- the fund's net asset value, net of fixed management fees and before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return equivalent to that of the benchmark index over the calculation period and with the same variations in subscriptions and redemptions as the fund:

(2) As of the financial year beginning on 01/04/2024, all underperformance relative to the fund's benchmark index over the past five years must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year.

FR0013241452 EI unit class

30%, including tax, of the return above the compounded €STR benchmark index + 0.15%, net of fixed management fees, even if this return is negative.

(1) The performance fee is calculated using the benchmark method.

The excess return to which the 30% tax-included rate applies is the difference between:

- the fund's net asset value, net of fixed management fees and before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return equivalent to that of the benchmark index over the calculation period and with the same variations in subscriptions and redemptions as the fund:

(2) As of the financial year beginning on 01/04/2024, all underperformance relative to the fund's benchmark index over the past five years must be made up for before any performance fee may be paid.

For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year.

FR0014007LZ3 IC unit class

30%, including tax, of the return above the compounded €STR benchmark index + 0.15%, net of fixed management fees, even if this return is negative.

(1) The performance fee is calculated using the benchmark method.

The excess return to which the 30% tax-included rate applies is the difference between:

- the fund's net asset value, net of fixed management fees and before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return equivalent to that of the benchmark index over the calculation period and with the same variations in subscriptions and redemptions as the fund:

(2) As of the financial year beginning on 01/04/2024, all underperformance relative to the fund's benchmark index over the past five years must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year.

The table below provides an example of the application of the above rules to the following assumed returns over a period of 19 years:

| | Net over / under- performance * | Under-performance to be offset the following year | Performance fee paid |
|---------|------------------------------------|------------------------------------------------------|----------------------|
| YEAR 1 | 5% | 0% | YES |
| YEAR 2 | 0% | 0% | NO |
| YEAR 3 | -5% | -5% | NO |
| YEAR 4 | 3% | -2% | NO |
| YEAR 5 | 2% | 0% | NO |
| YEAR 6 | 5% | 0% | YES |
| YEAR 7 | 5% | 0% | YES |
| YEAR 8 | -10% | -10% | NO |
| YEAR 9 | 2% | -8% | NO |
| YEAR 10 | 2% | -6% | NO |
| YEAR 11 | 2% | -4% | NO |
| YEAR 12 | 0% | 0 %** | NO |
| YEAR 13 | 2% | 0% | YES |
| YEAR 14 | -6% | -6% | NO |
| YEAR 15 | 2% | -4% | NO |
| YEAR 16 | 2% | -2% | NO |
| YEAR 17 | -4% | -6% | NO |
| YEAR 18 | 0% | -4%*** | NO |
| YEAR 19 | 5% | 0% | YES |

Notes concerning the above example:

* Net" outperformance/underperformance is defined here as the fund's return above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (year 13) is 0% (and not -4%) since the residual underperformance of year 8 that is yet to be offset (-4%) is no longer relevant as the underperformance of year 8 is only offset until year 12 as the five-year period has elapsed.

*** The underperformance of year 18 to be carried forward to the following year (year 19) is -4% (and not -6%) since the residual underperformance of year 14 that is yet to be offset (-2%) is no longer relevant as the underperformance of year 14 is only offset until year 18 as the five-year period has elapsed.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "Management Fees Borne by the fund". Management fees are based on the average net assets determined when each net asset value is calculated and consist essentially of asset management, administrative, valuation, depositary and statutory auditor fees. They do not include transaction expenses.

1. Transaction expenses

Brokerage fees, commissions and related fees and expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities made using funds obtained from the sale or redemption of securities or income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage paid to | | | | |
|----------------------|-----------------------|-----------|-------------------------|--|--|
| Account activity fee | Management Company | Custodian | Other service providers | | |
| N/A. | | | | | |

2. Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily opening price

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the previous day's closing price.

South-American exchanges: the previous day's closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price:

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily opening price

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the previous day's closing price.

South-American exchanges: the previous day's closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve

Shares or units in UCITS, AIF and other investment funds

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds

Securitisation funds listed on a European market are valued at their daily opening price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term of the agreement will not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

• Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily opening price or the previous day's settlement price.

- Futures listed on North-American exchanges are valued using the previous day's closing price or settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily opening price or the previous day's settlement price.

- Options listed on North-American exchanges are valued using the previous day's closing price or settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

3. Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

4. Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

ER unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

• Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|------------------------------------------------------------|--------|
| RC | FR0007390174 | 2% inc. tax | Net |
| | | o/w asset management fee: 1.97% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.03% inc. tax | |
| IC | FR0012170512 | 1% inc. tax | Net |
| | | o/w asset management fee: 0.97% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.03% inc. tax | |
| ER | FR0013226362 | 2.25% inc. tax | Net |
| | | o/w asset management fee: 2.22% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.03% inc. tax | |
| S | FR0013295342 | 1.5% inc. tax | Net |

| ER | FR0013226362 | N/A. |
| S | FR0013295342 | N/A. |

• Performance fee

FR0007390174 RC unit class N/A.

FR0012170512 IC unit class N/A.

FR0013226362 ER unit class N/A.

FR0013295342 S unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

1. Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | | | | |
|----------------------------------------------------------------|--------------------------|-----------|-----------|--|--|--|
| Account activity fee | Management | Custodian | Other | | | |
| | Company | | service | | | |
| | | | providers | | | |
| 0 to 0.20% inc. tax on equities Charged on each transaction | 100 | | | | | |

2. Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price. The price used for valuation depends on the exchange where the security is listed: European exchanges: the daily closing price. Asian exchanges: the daily closing price. Australian exchanges: the daily closing price. North-American exchanges: the daily closing price. South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.
exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

3. Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

4. Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

| | | Fixed management fees and expenses | Base |
|----|--------------|------------------------------------------------------------|--------|
| RC | FR0000444366 | 2% inc. tax | Net |
| | | o/w asset management fee: 1.96% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.04% inc. tax | |

N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

1. <u>Transaction expenses</u>

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

2. Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed: European exchanges: the daily closing price. Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor
- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

3. Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

4. Collateral received and granted

Collateral received:

N/A.

Collateral granted:

N/A.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

• Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|--------------------------------------------------------------------------------------------------------------------------|---------------|
| RC | FR0011153378 | 0.6% inc. tax o/w asset management fee: 0.54% inc. tax o/w expenses of operation & other services: 0.06% inc. tax | Net assets |
| S | FR0013299393 | 0.50% inc. tax o/w asset management fee: 0.44% inc. tax o/w expenses of operation & other services: 0.06% inc. tax | Net assets |
| IC | FR0014006FV6 | 0.4% inc. tax o/w asset management fee: 0.34% inc. tax o/w expenses of operation & other services: 0.06% inc. tax | Net assets |

• Indirect management fees (on CIU)

| | | Indirect management fees |

| S | FR0013299393 | N/A. |
| IC | FR0014006FV6 | N/A. |

• Performance fee

FR0011153378 RC unit class N/A.

FR0013299393 S unit class N/A.

FR0014006FV6 IC unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

<u>Transaction expenses</u>

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

• Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

<u>Collateral received and granted</u>

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

CHANGES IN NET ASSETS

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

ER unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular. **Fixed management fees and operating expenses (maximum rates)**

| | ou management ree | s and operating expenses (maximum rates) | |
|----|-------------------|--------------------------------------------------------------------------------------------------------------------------|---------------|
| | | Fixed management fees and expenses | Base |

FR0012287423 IC unit class N/A.

FR0013224797 ER unit class N/A.

FR0013295615 S unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|-----------------------------------------------------------------------------------------------------------------------|---------------|
| RC | FR0013246543 | 0.8% inc. tax o/w asset management fee: 0.7% inc. tax o/w expenses of operation & other services: 0.1% inc. tax | Net assets |
| IC | FR0013246550 | 0.8% inc. tax o/w asset management fee: 0.7% inc. tax o/w expenses of operation & other services: 0.1% inc. tax | Net assets |

Indirect management fees (on CIU)

| | | Indirect management fees |
|----|--------------|--------------------------|
| RC | FR0013246543 | N/A. |
| IC | FR0013246550 | N/A. |

Performance fee

FR0013246543 RC unit class N/A.

FR0013246550 IC unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | | | | |
|----------------------|--------------------------|-----------|-------------------------------|--|--|--|
| Account activity fee | Management Company | Custodian | Other service providers | | | |
| N/A. | | | | | | |

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one

currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|------------------------------------------------------------|---------------|
| RC | FR0013266624 | 2.5% inc. tax o/w asset management fee: 2.46% inc. tax | Net assets |
| | | o/w expenses of operation & other services: 0.04% inc. tax | assels |
| IC | FR0013266640 | 1.5% inc. tax | Net |
| | | o/w asset management fee: 1.46% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.04% inc. tax | |

Performance fee

FR0013266624 RC unit class N/A.

FR0013266640 IC unit class N/A.

FR0013298759 S unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

1. Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | | | | | |
|-----------------------------------------------------------|----------------------------------------------|--|--|--|--|--|--|
| Account activity fee | Management Company Custodian Other service p | | | | | | |
| 0.35% inc. tax on equities Charged on each transaction | 100 | | | | | | |

2. Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor
- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

3. Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

4. Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|------------------------------------------------------------|---------------|
| RC | FR0013298338 | 2.4% inc. tax o/w asset management fee: 2.32% inc. tax | Net assets |
| | | o/w expenses of operation & other services: 0.08% inc. tax | |
| S | FR0013298346 | 1.2% inc. tax | Net |
| | | o/w asset management fee: 1.12% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.08% inc. tax | |
| IC | FR0013529534 | 1.2% inc. tax | Net |
| | | o/w asset management fee: 1.12% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.08% inc. tax | |

Indirect management fees (on CIU)

| | | Indirect management fees |
|----|--------------|--------------------------|
| RC | FR0013298338 | N/A. |
| S | FR0013298346 | N/A. |
| IC | FR0013529534 | N/A. |

• Performance fee

FR0013298338 RC unit class

15% including tax of the excess return over the MSCI AC WORLD index with dividends reinvested (1) The performance fee is calculated using the benchmark method.

The excess return to which the 15% tax-included rate applies is the difference between:

- the fund's net asset value before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return that is equivalent to the higher of:

o the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions and redemptions as the fund

o a return of 0% relative to the most recent closing net asset value (or the first net asset value if the fund is in its first year).

(2) As of the financial year beginning on 01/04/2022, all underperformance relative to the fund's benchmark index must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) The management company will be entitled to performance fees on units redeemed over the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year

Part FR0013298346 S

15% including tax of the excess return over the MSCI AC WORLD index with dividends reinvested(1) The performance fee is calculated using the benchmark method.

The excess return to which the 15% tax-included rate applies is the difference between:

- the fund's net asset value before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return that is equivalent to the higher of:

o the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions and redemptions as the fund

o a return of 0% relative to the most recent closing net asset value (or the first net asset value if the fund is in its first year).

(2) As of the financial year beginning on 01/04/2022, all underperformance relative to the fund's benchmark index must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) The management company will be entitled to performance fees on units redeemed over the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last

net asset value of the financial year

FR0013529534 ICunit class

15% including tax of the excess return over the MSCI AC WORLD index with dividends reinvested

(1) The performance fee is calculated using the benchmark method.

The excess return to which the 15% tax-included rate applies is the difference between:

- the fund's net asset value before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return that is equivalent to the higher of:

o the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions and redemptions as the fund

o a return of 0% relative to the most recent closing net asset value (or the first net asset value if the fund is in its first year).

(2) As of the financial year beginning on 01/04/2022, all underperformance relative to the fund's benchmark index must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) The management company will be entitled to performance fees on units redeemed over the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year

The table below provides an example of the application of the above rules to the following assumed returns over a period of 19 years:

| | Net over / under- performance * | Under-performance to be offset the following year | Performance fee paid |
|---------|------------------------------------|---------------------------------------------------|----------------------|
| YEAR 1 | 5% | 0% | YES |
| YEAR 2 | 0% | 0% | NO |
| YEAR 3 | -5% | -5% | NO |
| YEAR 4 | 3% | -2% | NO |
| YEAR 5 | 2% | 0% | NO |
| YEAR 6 | 5% | 0% | YES |
| YEAR 7 | 5% | 0% | YES |
| YEAR 8 | -10% | -10% | NO |
| YEAR 9 | 2% | -8% | NO |
| YEAR 10 | 2% | -6% | NO |
| YEAR 11 | 2% | -4% | NO |
| YEAR 12 | 0% | 0 %** | NO |
| YEAR 13 | 2% | 0% | YES |
| YEAR 14 | -6% | -6% | NO |
| YEAR 15 | 2% | -4% | NO |
| YEAR 16 | 2% | -2% | NO |
| YEAR 17 | -4% | -6% | NO |
| YEAR 18 | 0% | -4%*** | NO |
| YEAR 19 | 5% | 0% | YES |

Notes concerning the above example:

* Net" outperformance/underperformance is defined here as the fund's return above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (year 13) is 0% (and not -4%) since the residual underperformance of year 8 that is yet to be offset (-4%) is no longer relevant as the underperformance of year 8 is only offset until year 12 as the five-year period has elapsed.

*** The underperformance of year 18 to be carried forward to the following year (year 19) is -4% (and not -6%) since the residual underperformance of year 14 that is yet to be offset (-2%) is no longer relevant as the underperformance of year 14 is only offset until year 18 as the five-year period has elapsed.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

1. Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | |
|----------------------|--------------------------|-----------|-------------------------|
| Account activity fee | Management Company | Custodian | Other service providers |
| N/A. | | | |

2. Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

3. Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

4. Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

RD unit class: Income: distributed Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular. **Fixed management fees and operating expenses (maximum rates)**

| | | Fixed management fees and expenses | Base | | | | |
|----|--------------|-------------------------------------------------------------------------------------------------------------------------|---------------|--|--|--|--|
| RC | FR0013336773 | 0.6% inc. tax o/w asset management fee: 0.56% inc. tax o/w expenses of operation & other services: 0.04% inc. tax | Net assets | | | | |

FR0013336773 RC unit class N/A.

FR0013336765 RD unit class N/A.

FR0013371341 S unit class N/A.

FR0013472461 IC unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| Account activity fee | Management Company | Custodian | Other service providers | | | |
| N/A. | | | | | | |

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base | | | |
|-----------------------------------|--------------|--------------------------------------------------------------------------------------------------------------------------|---------------|--|--|--|
| IC | FR0013373206 | 0.50% inc. tax o/w asset management fee: 0.46% inc. tax o/w expenses of operation & other services: 0.04% inc. tax | Net assets | | | |
| Indirect management fees (on CIU) | | | | | | |

| | | Indirect management fees |
|----|--------------|--------------------------|
| IC | FR0013373206 | N/A. |

Performance fee

FR0013373206 IC unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "Management Fees Borne by the fund". Management fees are based on the average net assets determined when each net asset value is calculated and consist essentially of asset management, administrative, valuation, depositary and statutory auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and related fees and expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities made using funds obtained from the sale or redemption of securities or income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily opening price

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the previous day's closing price.

South-American exchanges: the previous day's closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price:

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily opening price

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the previous day's closing price.

South-American exchanges: the previous day's closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve

Shares or units in UCITS, AIF and other investment funds

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds

Securitisation funds listed on a European market are valued at their daily opening price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term of the agreement will not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

• Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily opening price or the previous day's settlement price.

- Futures listed on North-American exchanges are valued using the previous day's closing price or settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily opening price or the previous day's settlement price.

- Options listed on North-American exchanges are valued using the previous day's closing price or settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|------------------------------------------------------------|--------|
| RC | FR0013384963 | 2.25% inc. tax | Net |
| | | o/w asset management fee: 2.21% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.04% inc. tax | |
| S | FR0013384971 | 1.5% inc. tax | Net |
| | | o/w asset management fee: 1.46% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.04% inc. tax | |
| IC | FR0013384989 | 0.8% inc. tax | Net |
| | | o/w asset management fee: 0.76% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.04% inc. tax | |

Indirect management fees (on CIU)

| | | Indirect management fees |
|----|--------------|--------------------------|
| RC | FR0013384963 | N/A. |
| S | FR0013384971 | N/A. |
| IC | FR0013384989 | N/A. |

Performance fee

FR0013384963 RC unit class

15% including tax of the excess return above EURO STOXX Net Return benchmark index.

(1) The performance fee is calculated using the benchmark method.

The excess return to which the 15% tax-included rate applies is the difference between:

- the fund's net asset value before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return that is equivalent to that of the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions and redemptions as the fund.

(2) As of the financial year beginning on 01/04/2022, all underperformance relative to the fund's benchmark index must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) The management company will be entitled to performance fees on units redeemed over the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year. FR0013384971 S unit class

N/A.

FR0013384989 IC unit class N/A.

The table below provides an example of the application of the above rules to the following assumed returns over a period of 19 years:

| | Net over / under- performance * | Under-performance to be offset the following year | Performance fee paid |
|---------|------------------------------------|------------------------------------------------------|----------------------|
| YEAR 1 | 5% | 0% | YES |
| YEAR 2 | 0% | 0% | NO |
| YEAR 3 | -5% | -5% | NO |
| YEAR 4 | 3% | -2% | NO |
| YEAR 5 | 2% | 0% | NO |
| YEAR 6 | 5% | 0% | YES |
| YEAR 7 | 5% | 0% | YES |
| YEAR 8 | -10% | -10% | NO |
| YEAR 9 | 2% | -8% | NO |
| YEAR 10 | 2% | -6% | NO |
| YEAR 11 | 2% | -4% | NO |
| YEAR 12 | 0% | 0 %** | NO |
| YEAR 13 | 2% | 0% | YES |
| YEAR 14 | -6% | -6% | NO |
| YEAR 15 | 2% | -4% | NO |
| YEAR 16 | 2% | -2% | NO |
| YEAR 17 | -4% | -6% | NO |
| YEAR 18 | 0% | -4%*** | NO |
| YEAR 19 | 5% | 0% | YES |

Notes concerning the above example:

* Net" outperformance/underperformance is defined here as the fund's return above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (year 13) is 0% (and not -4%) since the residual underperformance of year 8 that is yet to be offset (-4%) is no longer relevant as the underperformance of year 8 is only offset until year 12 as the five-year period has elapsed.

*** The underperformance of year 18 to be carried forward to the following year (year 19) is -4% (and not -6%) since the residual underperformance of year 14 that is yet to be offset (-2%) is no longer relevant as the underperformance of year 14 is only offset until year 18 as the five-year period has elapsed.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | | | |
|----------------------|--------------------------|-----------|-------------------------------|--|--|
| Account activity fee | Management Company | Custodian | Other service providers | | |
| N/A. | | | | | |

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|------------------------------------------------------------|--------|
| RC | FR0013384997 | 2.25% inc. tax | Net |
| | | o/w asset management fee: 2.18% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.07% inc. tax | |
| S | FR0013385002 | 1.5% inc. tax | Net |
| | | o/w asset management fee: 1.43% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.07% inc. tax | |
| IC | FR0013385010 | 0.9% inc. tax | Net |
| | | o/w asset management fee: 0.83% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.07% inc. tax | |

Indirect management fees (on CIU)

| | | Indirect management fees |
|----|--------------|--------------------------|
| RC | FR0013384997 | N/A. |
| S | FR0013385002 | N/A. |
| IC | FR0013385010 | N/A. |

Performance fee

FR0013384997 RC unit class

15% including tax of the excess return above EURO STOXX Small Net Return

(1) The performance fee is calculated using the benchmark method.

The excess return to which the 15% tax-included rate applies is the difference between:

- the fund's net asset value before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return that is equivalent to that of the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions and redemptions as the fund.

(2) As of the financial year beginning on 01/04/2022, all underperformance relative to the fund's benchmark index must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) The management company will be entitled to performance fees on units redeemed over the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year. FR0013385002 S unit class

N/A.

FR0013385010 IC unit class N/A.

The table below provides an example of the application of the above rules to the following assumed returns over a period of 19 years:

| | Net over / under- performance * | Under-performance to be offset the following year | Performance fee paid |
|---------|------------------------------------|------------------------------------------------------|----------------------|
| YEAR 1 | 5% | 0% | YES |
| YEAR 2 | 0% | 0% | NO |
| YEAR 3 | -5% | -5% | NO |
| YEAR 4 | 3% | -2% | NO |
| YEAR 5 | 2% | 0% | NO |
| YEAR 6 | 5% | 0% | YES |
| YEAR 7 | 5% | 0% | YES |
| YEAR 8 | -10% | -10% | NO |
| YEAR 9 | 2% | -8% | NO |
| YEAR 10 | 2% | -6% | NO |
| YEAR 11 | 2% | -4% | NO |
| YEAR 12 | 0% | 0 %** | NO |
| YEAR 13 | 2% | 0% | YES |
| YEAR 14 | -6% | -6% | NO |
| YEAR 15 | 2% | -4% | NO |
| YEAR 16 | 2% | -2% | NO |
| YEAR 17 | -4% | -6% | NO |
| YEAR 18 | 0% | -4%*** | NO |
| YEAR 19 | 5% | 0% | YES |

Notes concerning the above example:

* Net" outperformance/underperformance is defined here as the fund's return above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (year 13) is 0% (and not -4%) since the residual underperformance of year 8 that is yet to be offset (-4%) is no longer relevant as the underperformance of year 8 is only offset until year 12 as the five-year period has elapsed.

*** The underperformance of year 18 to be carried forward to the following year (year 19) is -4% (and not -6%) since the residual underperformance of year 14 that is yet to be offset (-2%) is no longer relevant as the underperformance of year 14 is only offset until year 18 as the five-year period has elapsed.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | | | | |
|----------------------|--------------------------|-----------|-------------------------------|--|--|--|
| Account activity fee | Management Company | Custodian | Other service providers | | | |
| N/A. | | | | | | |

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|--------------------------------------------------------------------------------------------------------------------------|---------------|
| RC | FR0013384336 | 2.2% inc. tax o/w asset management fee: 2.05% inc. tax o/w expenses of operation & other services: 0.15% inc. tax | Net assets |
| IC | FR0013489390 | 1.1% inc. tax o/w asset management fee: 0.95% incl. tax o/w expenses of operation & other services: 0.15% inc. tax | Net assets |

Indirect management fees (on CIU)

| | | Indirect management fees |
|----|--------------|--------------------------|
| RC | FR0013384336 | N/A. |
| IC | FR0013489390 | N/A. |

Performance fee

FR0013384336 RC unit class

15% including tax of the excess return above a benchmark index composed of 50% Compounded €STR and 50% EURO STOXX Large Net Return

(1) The performance fee is calculated using the benchmark method.

The excess return to which the 15% tax-included rate applies is the difference between:

- the fund's net asset value before adjusting to account for the provision for the performance fee, and

- the value of a reference asset that has achieved a return that is equivalent to that of the benchmark index (or other index if necessary) over the calculation period and with the same variations in subscriptions and redemptions as the fund.

(2) As of the financial year beginning on 01/04/2022, all underperformance relative to the fund's benchmark index must be made up for before any performance fee may be paid. For this purpose, a rolling observation period extendible from 1 to 5 years is implemented, and the performance fee calculation is reset to zero whenever a performance fee is charged.

(3) At each net asset value calculation:

- If the fund's return exceeds the performance fee threshold, an allocation is made to the performance fee provision.

- If the fund's return is below the performance fee threshold, the performance fee provision is reversed within the limit of the available provision.

(4) The management company will be entitled to performance fees on units redeemed over the year.

(5) If the fund outperforms its benchmark, the performance fee shall be payable annually on the last net asset value of the financial year.

FR0013489390 IC unit class N/A.

The table below provides an example of the application of the above rules to the following assumed returns over a period of 19 years:

| | Net over / under- performance * | Under-performance to be offset the following year | Performance fee paid |
|---------|------------------------------------|---------------------------------------------------|----------------------|
| YEAR 1 | 5% | 0% | YES |
| YEAR 2 | 0% | 0% | NO |
| YEAR 3 | -5% | -5% | NO |
| YEAR 4 | 3% | -2% | NO |
| YEAR 5 | 2% | 0% | NO |
| YEAR 6 | 5% | 0% | YES |
| YEAR 7 | 5% | 0% | YES |
| YEAR 8 | -10% | -10% | NO |
| YEAR 9 | 2% | -8% | NO |
| YEAR 10 | 2% | -6% | NO |
| YEAR 11 | 2% | -4% | NO |
| YEAR 12 | 0% | 0 %** | NO |
| YEAR 13 | 2% | 0% | YES |
| YEAR 14 | -6% | -6% | NO |
| YEAR 15 | 2% | -4% | NO |
| YEAR 16 | 2% | -2% | NO |
| YEAR 17 | -4% | -6% | NO |
| YEAR 18 | 0% | -4%*** | NO |
| YEAR 19 | 5% | 0% | YES |

Notes concerning the above example:

* Net" outperformance/underperformance is defined here as the fund's return above/below the benchmark return.

** The underperformance of year 12 to be carried forward to the following year (year 13) is 0% (and not -4%) since the residual underperformance of year 8 that is yet to be offset (-4%) is no longer relevant as the underperformance of year 8 is only offset until year 12 as the five-year period has elapsed.

*** The underperformance of year 18 to be carried forward to the following year (year 19) is -4% (and not -6%) since the residual underperformance of year 14 that is yet to be offset (-2%) is no longer relevant as the underperformance of year 14 is only offset until year 18 as the five-year period has elapsed.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | | |
|----------------------|--------------------------|-----------|-------------------------------|--|
| Account activity fee | Management Company | Custodian | Other service providers | |
| N/A. | | | | |

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

RD unit class: Income: accumulation and/or annual distribution and/or retention Capital gains/losses: accumulation and/or distribution and/or retention.

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |

FR0013481082 S unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|------------------------------------------------------------|--------|
| RC | FR0014000YQ0 | 2.4% inc. tax | Net |
| | | o/w asset management fee: 2.31% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.09% inc. tax | |

| IC | FR0014000YR8 | N/A. |
| S | FR0014000YS6 | N/A. |

Performance fee

FR0014000YQ0 RC unit class N/A.

FR0014000YR8 IC unit class N/A.

FR0014000YS6 S unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| N/A. | | | | |

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk. For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

Additional information:

The non-recurring costs of debt collection on behalf of the fund or of legal proceedings to enforce a claim may be added to the ongoing fees charged to the fund listed above.

* The actual operating expenses and fees for other services may exceed the permissible maximum rate, in which case the management company will pay the excess.

The management company may also have to make a provision for the maximum permissible fee if the actual "operating expenses and fees for other services" are lower than this fee.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

R unit: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

ER unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

• Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|--------------------------------------------------------------------------------------------------------------------------|---------------|

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

1. Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | |
|----------------------------------------------------------------|--------------------------|-----------|-------------------------|
| Account activity fee | Management Company | Custodian | Other service providers |
| 0 to 0.10% inc. tax on equities Charged on each transaction | 100 | | |

2. Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

3. Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

4. Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in US dollars, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "Management Fees Borne by the fund". Management fees are based on the average net assets determined when each net asset value is calculated and consist essentially of asset management, administrative, valuation, depositary and statutory auditor fees. They do not include transaction expenses.

1. <u>Transaction expenses</u>

Brokerage fees, commissions and related fees and expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities made using funds obtained from the sale or redemption of securities or income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | |
|----------------------|--------------------------|-----------|-------------------------|
| Account activity fee | Management Company | Custodian | Other service providers |
| N/A. | | | |

2. Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily opening price

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the previous day's closing price.

South-American exchanges: the previous day's closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price:

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily opening price

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the previous day's closing price.

South-American exchanges: the previous day's closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve

Shares or units in UCITS, AIF and other investment funds

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds

Securitisation funds listed on a European market are valued at their daily opening price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term of the agreement will not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

NDS which have a residual maturity when acquired are marked to market.

• Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at yield to maturity or at the daily market price.

Securities for which prices are not regularly or realistically quoted will be valued using an actuarial method at the yield of a reference yield curve, with a margin to account for the issuer's credit spread or other intrinsic characteristics.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily opening price or the previous day's settlement price.

- Futures listed on North-American exchanges are valued using the previous day's closing price or settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily opening price or the previous day's settlement price.

- Options listed on North-American exchanges are valued using the previous day's closing price or settlement price.

Swaps:

Swaps are valued at their market price.

Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

3. Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

4. Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any given issuer must not exceed 15% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RD unit class: Income: Distributed Capital gains/losses: 100% accumulation

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |
|----|--------------|------------------------------------------------------------|--------|
| RD | FR0000984221 | 2% inc. tax | Net |
| | | o/w asset management fee: 1.92% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.08% inc. tax | |
| RC | FR0010444992 | 2% inc. tax | Net |
| | | o/w asset management fee: 1.92% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.08% inc. tax | |
| IC | FR0014007M09 | 1% inc. tax | Net |
| | | o/w asset management fee: 0.92% inc. tax | assets |
| | | o/w expenses of operation & other services: 0.08% inc. tax | |

Indirect management fees (on CIU)

| | | Indirect management fees |
|----|--------------|--------------------------|
| RD | FR0000984221 | N/A. |
| RC | FR0010444992 | N/A. |
| IC | FR0014007M09 | N/A. |

Performance fee

FR0000984221 RD unit class N/A.

FR0010444992 RC unit class N/A.

FR0014007M09 IC unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| Account activity fee | Percentage of allocation | | | | | |
|-----------------------------------------------------------------------------------|--------------------------|-----------|-----------|--|--|--|
| Account activity fee | Management | Custodian | Other | | | |
| | Company | | service | | | |
| On equities: 0.2392% inc. tax from 0 to €2,000,000 0.2196% inc. tax au-delà | 100 | | providers | | | |
| - On funds: 0% | | | | | | |
| - On bonds: 0% Charged on each transaction | | | | | | |

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

CHANGES IN NET ASSETS

| | 31/03/2023 | 31/03/2022 |

E.

ACCOUNTING RULES AND METHODS

The annual financial statements are presented in accordance with ANC Regulation No. 2014-01 as amended.

Accounting figures are indicated in euros, which is the fund's currency of account.

Income recognition

Financial accounts include any accrued interest that may be due.

The fund recognises income on a cash basis.

Recognition of securities transactions

The recognition of the fund's portfolio security transactions does not include trading expenses.

Allocation of distributable amounts

RC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

RD unit class: Income: distributed Capital gains/losses: 100% accumulation

R unit: Income: 100% accumulation Capital gains/losses: 100% accumulation

IC unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

S unit class: Income: 100% accumulation Capital gains/losses: 100% accumulation

Management fees and operating expenses

Management fees are indicated in the fund's full prospectus or information circular.

Fixed management fees and operating expenses (maximum rates)

| | | Fixed management fees and expenses | Base |

FR0012432565 IC unit class N/A.

FR0013295490 S unit class N/A.

Fee sharing

The management company determines the policy for recognising fees shared with funds held in the portfolio.

Shared fees are recognised after management fees are deducted. The fees which the fund actually bears are shown in the table entitled "MANAGEMENT FEES BORNE BY THE FUND". Management fees are calculated on the average net assets when each net asset value is calculated and include the expenses of investment management, administration, valuation, depositary fees and independent auditor fees. They do not include transaction expenses.

Transaction expenses

Brokerage fees, commissions and other expenses arising from the sale of securities in the fund's portfolio or from the purchase of securities using funds obtained either from the sale or redemption of securities or from income from the fund's assets, are charged against these assets and deducted from the fund's cash and cash equivalents.

| | Percentage of allocation | | | | |

| Account activity fee | Management Company | Custodian | Other service providers | | |
| From 0 to 0.10% inc. tax on equities Charged on each transaction | 100 | | | | |

Valuation method

The following rules apply to all valuations of the fund's assets:

Listed equities and equivalent securities (French and foreign):

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If a price for a security has not been quoted, the previous trading day's share price shall be used

Bonds and equivalent debt instruments (French and foreign) and EMTNs:

These securities are valued at their market price.

The price used for valuation depends on the exchange where the security is listed:

European exchanges: the daily closing price.

Asian exchanges: the daily closing price.

Australian exchanges: the daily closing price.

North-American exchanges: the daily closing price.

South-American exchanges: the daily closing price.

If no quote for a given security can be obtained the previous day's closing price will be used.

If the fund manager feels that the price quoted is not realistic, a price that more closely reflects actual market conditions will be estimated. Depending on the sources available, various methods may be used to estimate this price, such as one of the following, for example:

- a price from a price contributor

- an average price from two or more contributors

- a price calculated using an actuarial method, from a credit or other spread and a yield curve,

UCITS, AIF and other investment funds held in the portfolio:

These securities are valued on the basis of the fund's most recent net asset value.

Shares in securitisation funds:

Securitisation funds listed on a European market are valued at their daily closing price.

Temporary acquisitions of securities:

• Securities acquired under reverse repurchase agreements are valued at the contractual value. The term shall not exceed three months.

• Securities acquired under optional repurchase agreements are valued at the contractual value, since it is sufficiently certain that the seller will buy the securities back.

• Borrowed securities and the corresponding debt are valued at the market price of the securities.

Temporary disposals of securities:

• Securities disposed of under a repurchase agreement are valued at their market price. The liability associated with these securities is maintained at the contractual value.

• Lent securities are valued at their market price. The fund recovers the securities upon termination of the lending agreement.

Unlisted securities:

Unlisted securities are valued on the basis of net assets, cash flows and prices paid during recent significant transactions.

Negotiable debt securities:

• NDS that have a residual maturity of less than three months when acquired are valued on a straightline basis.

• NDS that have a residual maturity of more than three months when acquired are valued:

- at their market value, until three months and one day prior to their maturity.

- the difference between the market value observed three months and one day before maturity and the redemption value is valued on a straight-line basis over the last three months.

- exceptions : BTF and BTAN are valued at the market price until maturity.

Applicable market values:

- BTF and BTAN:

The yield to maturity at the daily rate published by the Banque de France.

- Other NDS:

NDS for which prices are regularly quoted will be valued at their yield to maturity or at the daily market price.

Securities for which prices are not regularly quoted will be valued using a proportional method at the rate of the reference yield curve, which is adjusted to account for the issuer's intrinsic credit quality.

Futures contracts:

The market prices used to value futures contracts must be consistent with the prices of the underlying securities. These prices depend on where the contracts are traded.

- Futures listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Futures listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Options:

The market prices used for options are determined using the same rules that apply to futures contracts and their underlying securities:

- Options listed on European exchanges are valued using the daily closing price or the daily settlement price.

- Options listed on North-American exchanges are valued using the daily closing price or the daily settlement price.

Swaps:

• Swaps with a residual life of three months or less are valued on a straight-line basis.

• Swaps with a residual life of more than three months are marked to market.

• Index swaps are valued at the price provided by the counterparty, this price being independently verified by the management company.

• When the quality and maturity of the securities swapped can be clearly determined, an overall assessment of these two factors is made.

Forward exchange contracts:

These contracts are used to hedge the currency risk of portfolio securities that are denominated in a currency other than the fund's currency, by exchanging the estimated price of the security in one currency for an equivalent amount in the other currency at an agreed exchange rate at a future date. Forward currency transactions are valued using the yield curve of the foreign currency.

Valuation of off-balance sheet transactions

• Futures and forward contract transactions are valued at their market value. The market value is the valuation price multiplied by the number of contracts and their nominal value. Forward contract transactions are valued at their nominal value, or in the absence of this at an equivalent amount.

• Option transactions are valued on the basis of the option's underlying equivalent. This involves multiplying the number of options by a delta value, which is determined using a Black-Scholes type mathematical model and the following parameters: the underlying price, the time until expiration, the short-term interest rate, the option's exercise price and the underlying's volatility. The presentation of the off-balance sheet option transaction reflects its economic nature and not the position taken in the transaction.

• Dividend swaps are recognised off the balance sheet at their nominal value.

• All swaps are recognised off the balance sheet at their nominal value.

Collateral received and granted

Collateral received:

N/A.

Collateral granted:

When engaging in over-the-counter derivative transactions and securities financing transactions, the fund may receive financial assets which serve as collateral to reduce its exposure to counterparty risk.

For OTC derivative transactions, this collateral will mainly be in the form of cash or financial securities. For securities financing transactions it will mainly consist of cash and eligible government bonds.

These bonds must be issued or guaranteed by a central government or local authority of an OECD member country, or by a supranational institution or body of EU, regional or global scope.

All collateral received must comply with the following principles:

- Liquidity: All securities collateral must be highly liquid and rapidly tradable on a regulated market at a transparent price.

- Transferability: Collateral must be transferable at all times.

- Valuation: All collateral received must be valued daily at the market price or using a pricing model. A conservative discount or "haircut" will be applied to securities that are significantly volatile or if their credit quality declines.

- Issuer credit quality: All collateral must be of high quality, as determined by the management company.

- Investment of cash collateral: Cash collateral must either be deposited with an eligible entity, invested in premium quality government bonds (with a credit rating that meets the criteria for money market UCITS and/or AIF), invested in money market UCITS and/or AIF, or used for reverse repo transactions with a credit institution,

- Correlation: the collateral issuer must be independent of the counterparty.

- Diversification: Exposure to any single issuer must not exceed 20% of net assets.

- Custody: All collateral received must be placed with the Depositary or one of its agents or a third party under its control, or with a third-party depositary subject to prudential supervision and which has no relationship with the provider of the collateral.

- Prohibition to re-use collateral: Non-cash collateral collected may not be sold, reinvested or pledged as collateral.

SECOND RESOLUTION

The General Meeting notes that there is \in 36,618,123.27 of distributable consolidated net income for the year. This amount comprises the net income for the year of \in 43,692,234.43 and accrued net expenses of \in 7,074,111.15. The General Meeting resolves to allocate this distributable income as follows:

• For the CM-AM INSTITUTIONAL SHORT TERM sub-fund, a distributable profit of €3,069,289.12, consisting of annual net income of €3,709,976.54, net accrued expenses of €640,696.76 and the previous year's retained earnings of €9.34 brought forward, allocated as follows:

IC unit class: Accumulation of €195,149.10.

RC unit class: Accumulation of €2,803,780.98.

El unit class: Accumulation of €45,076.34.

RD unit class: Partial distribution of €25,269.02, for a net total dividend per unit of € 10.73.

RD unit class: Retention of €13.68.

The General Meeting notes, pursuant to Article 243 bis of the French general tax code, that the following dividends were distributed over the past three years:

Year ended 31/03/2022: **RD unit class:** €0.42, with no tax credit. **RC unit class:** No dividend. **IC unit class:** No dividend. **El unit class:** No dividend.

• For the CM-AM GLOBAL GOLD sub-fund, a distributable loss of €1,046,441.34, consisting of an annual net loss of €842,779.46 and net accrued expenses of €203,661.88, which was allocated as follows:

RC unit class: Accumulation of \in -1,359,008.31. **ER unit class:** Accumulation of \in 2,073.37. **S unit class:** Accumulation of \in 256,194.47. **IC unit class:** Accumulation of \in 54,299.13.

The General Meeting notes that no dividends have been paid out over the past three financial years.

• For the CM-AM SUSTAINABLE PLANET sub-fund, a distributable profit of €770,845.61, consisting of annual net income of €532,279.67 and net accrued income of €238,565.94, allocated as follows:

RC unit class: Accumulation of €366,556.73. **S unit class:** Accumulation of €399,149.12. **IC unit class:** Accumulation of €5,139.76.

The General Meeting notes that no dividends have been paid out over the past three financial years.

• For the CM-AM INFLATION sub-fund, a distributable profit of €170,337.36, consisting of annual net income of €196,435.69 and net accrued expenses of €26,098.33, allocated as follows:

SICAV CM-AM SICAV

Statutory auditor's report on the financial statements

For the year ended March 31st,2023

This is a free translation into English of the statutory auditors' report issued in the French language and is provided solely for the convenience of English speaking readers. The statutory auditors' report includes information specifically required by French law in all audit reports, whether qualified or not, and this is presented below the opinion on the financial statements. This information includes an explanatory paragraph discussing the auditors' assessments of certain significant accounting and auditing matters. These assessments were considered for the purpose of issuing an audit opinion on the financial statements taken as a whole and not to provide separate assurance on individual account captions or on information taken outside of the financial statements.

This report should be read in conjunction with, and construed in accordance with, French law and professional auditing standards applicable in France.

SICAV CM-AM SICAV

4, rue Gaillon 75002 Paris

Statutory auditor's report on the financial statements (Translated from French into English)

Year ended March 31st, 2022

To the shareholders of the SICAV CM-AM SICAV,

Opinion

In compliance with the engagement entrusted to us by the management company, we have audited the accompanying financial statements of (SICAV) CM-AM SICAV for the year ended March 31st, 2023.

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the fund as at March 31st, 2023 and of the results of its operations for the year then ended in accordance with French accounting principles.

Basis for opinion

Audit framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the Statutory Auditor's Responsibilities for the Audit of the Financial Statements section of our report.

Independence

We conducted our audit engagement in compliance with independence requirements of rules required by the French Commercial Code (code de commerce) and the French Code of ethics (code de déontologie) for statutory auditors for the period from April 1st, 2022 to date of our report.

Justification of Assessments

In accordance with the requirements of the articles L.823-9 and R.823-7 of the French Commercial Code (Code de commerce) relating to the justification of our assessments, we draw to your attention the following justifications whitch, in our professional judgement, where the most significant for the audit of the financial statements of the period.

These matters were addressed in the context of our audit of the financial statements as a whole, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the financial statements.

Complex derivatives are valued using the methods described in the fund regulations and in the appendix. We have taken note of the independent valuation procedure, existing within the management company, and we have verified the correct application of this procedure.

Specific verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by laws and regulations.

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information given in the management report and in the other documents provided to sharholders with respect to the financial position and the financial statements.

We attest to existence in the section of the management report devoted to corporate governance, the information required by Article L.223-37-4 of the Commercial Code

Responsibilities of the management company concerning the Financial Statements

The management company is responsible for the preparation and fair presentation of the financial statements in accordance with French accounting principles and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the management company is responsible for assessing the SICAV's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Company or to cease operations.

The financial statements were approved by the board of directors.

Statutory Auditors' Responsibilities for the Audit of the Financial Statements

Our role is to issue a report on the financial statements. Our objective is to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As specified in Article L.823-10-1 of the French Commercial Code (code de commerce), our statutory audit does not include assurance on the viability of the SICAV or the quality of management of the affairs of the SICAV.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control.
- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the financial statements.
- Assesses the appropriateness of the management company's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the SICAV's ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein.

• Evaluates the overall presentation of the financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

The statutory auditor
